Cours	se code	BIOSIGNAL PROCESSING LABORATORY	L	Т	Р	С
<b>22B</b> I	M2032		0	0	3	1.5
Course	Objectiv	/es:				
Enable	the studer	nt to				
1.	Analyze	various biosignals.				
2.	Apply M	Iatlab/LabVIEW for processing biosignals.				
3.	Process	biosignals using various signal processing algorithms.				
Course	e Outcom	es:				
The stu	dent will	be able to:				
1.	Apply F	ourier transformations on a given data.				
2.	Design l	IR and FIR filters for the given specification.				
3.		he characteristics of given ECG signal.				
4.		e the given EMG signal for specific analysis.				
5.		the reason for changes in respiratory signals.				
6.		trate the usage of software tools for biosignal analysis.				
	Experim					
		d FFT computation				
2.		rs design-digital Butterworth filter				
3.		rs design-digital Chebyshev filter				
4.		er design using windowing techniques				
5.		e filter design				
6.		s of PPG signals				
7.		n of QRS complex in ECG				
8.	Analysis	s of EMG				

- 9. Analysis of heart rate variability
- 10. Analysis of respiratory signal

11. Measurement of Oxygen saturation using Raspberry Pi

12. Measurement & Analysis of ECG signal using Raspberry Pi

**Recommended by Board of Studies** 04.05.2023

Approved by Academic Council

Course code	MEDICAL IOT LABORATORY	L	Т	Р	С
23BM2002		0	0	2	1
<b>Course Objecti</b>	ves:				

Enable the student to:

- 1. Distinguish Embedded Processors and Microcontrollers to monitor and control data remotely.
- 2. Develop embedded programming for Medical IoT.
- 3. Interface IoT communication protocol using various wireless modules.

#### **Course Outcomes:**

The student will be able to:

- 1. Configure wireless devices using embedded software.
- 2. Demonstrate the hardware configuration of IoT devices with embedded hardware.
- 3. Assess the characteristics of communication protocols.
- 4. Develop programs for implementation in Raspberry pi processor.
- 5. Illustrate the interfacing of IoT devices and access cloud platforms.
- 6. Recommend the usage of software tools for vital parameter monitoring.

#### List of Experiments:

1. Configuring embedded/LabVIEW software setup and GPIO configuration

- 2. Study the characteristics of bluetooth modules and their interfacing complying with IEEE standards.
- 3. Interfacing of WiFi device for data communication.
- 4. Web publishing method for monitoring sensor data.
- 5. Wireless transmission of ECG signal using TCP/IP protocol
- 6. Mobile phone-based monitoring of respiration rate
- 7. Configuring Raspberry Pi software setup and GPIO configuration
- 8. Cloud based monitoring of biomedical signals using Raspberry Pi Processor
- 9. Interfacing PPG sensor and Monitoring of SpO<sub>2</sub> using Raspberry Pi
- 10. Interfacing Long Range Communication Protocol for wireless transmission
- 11. Biosensor interfacing with LoRA Protocol
- 12. Development of Medical IoT system for wireless transmission of ECG and PPG signals using MAX86150.

Course code	NEMS in Healthcare	L	Т	Р	С
23BM2003		3	0	0	3
<b>Course Objectiv</b>	ves:				
Enable the stude	nt to:				
	hend NEMS Technology.				
	ne concepts of nanomaterials in development of medical devices.				
ÿ	Nano based health systems.				
<b>Course Outcom</b>					
The student will					
	hend the basic concepts of NEMS.				
	e the use of different types of sensors in healthcare industry				
	the use of Nanomaterials for healthcare domain.				
	e the importance of NEMS in Implants.				
	ne nanotechnology methods used in drug delivery systems.				
	the features of NEMS in healthcare.				
Module: 1	Introduction to NEMS			ours	
	EMS- Difference between NEMS and MEMS- Design of NEMS - N	JEM	S dev	vice	and
structures - Ator	nic structures – Quantum mechanics – Nanostructure dynamics.				
Module: 2	NEMS Transducer and Sensor			lours	
	ezoelectric sensor - Electromechanical heterostructure - Biosensor - A	Acou	istic	sense	or –
v 1	heir uses in Biofield.				
Module: 3	Nanomaterials used in healthcare			ours	
	operties used in Implantable Medical devices-Graphene - Materials ar				
	niques - Perfluorocarbon - Materials and properties used for Dentistry-				
-	operties used in cellular imaging-Quantum clots - Application of Sili	icon	in he	ealth	are
fields.					
Module: 4	NEMS in Implantable Medical Devices			ours	
	mponents for Implantable Medical Devices: NEMS switch for IMDs-			nplif	ier-
	EMS Microcontroller-NEMS based dental implants- NEMS based pace	make			
Module: 5	Nanotechnology in Drug delivery			ours	
	f nanotechnology based techniques in designing of drug - Drug de				
	and mechanism - Nanoparticles used in drug delivery system - Natu	ral p	rodu	ct ba	sed
nanotechnology	and drug delivery - Future of nanomedicine and drug delivery system.

Course code	MEDICAL DEVICE REGULATIONS	L	Т	Р	С
23BM2006		3	0	0	3

BIOMEDICAL ENGINEERING (2023)

Course Objectives: Enable the student to:	
1. Identify importance of medical device regulations across countries.	
<ol> <li>Learn different regulatory schemes adopted in countries.</li> </ol>	
<ol> <li>Analyse the challenges in regulatory aspects of AI based medical devices.</li> </ol>	
Course Outcomes:	
The student will be able to:	
1. Identify various medical device regulatory norms.	
<ol> <li>Interpret the difference between various clinical practices.</li> </ol>	
3. Outline the FDA regulations of medical devices.	
4. Examine the regulations of medical devices in Europe.	
5. Apply the medical device regulation policies of India for make in India products.	
6. Solve various challenges that arise in cyber world in AI based medical devices.	
Module: 1Introduction to Medical Devices7 Hours	
Classifications of medical devices on the basis of risk- History of medical device regulations global	lly-
Product life cycle of medical device- The five stages of the medicinal product life cycle- Internation	
Medical Device Regulators Forum-IMDRF Management Committee- Global Harmonization Task For	
(GHTF)	
Module: 2Ethics of Clinical trials of Medical Devices8 Hours	
Clinical investigational plan for medical devices- Clinical investigation conduct- ISO 14155:20	11-
International Council on Harmonization of Good Clinical Practice- ISO 13485:2016: quality management	ent
system of medical devices requirements for regulatory purposes- ISO 14971:2019 medical device r	isk
management applications- Risk management application throughout the lifecycle of the device	
Module: 3Regulations for Medical Devices in the United States8 Hours	
US Food & Drug Administration (FDA)- Classification of medical devices (I- II- and III)- Regulated	
approval process for medical device- Premarket notification 510 (k) -21 CFR Part 807 E- Premarket	
approval- Approval process of medical devices in the USA- Investigational device exemption- Qual	
system requirements-21 CFR part 820- Labelling requirements-21 CFR Part 80- Post-marketi	ing
surveillance of medical device- Unique device identification of medical device	
Module: 4European Union Medical Devices Regulations8 Hours	
Medical devices' laws in Europe- The new approach for regulating products- Regulatory approval proc	
of medical device- Notified bodies in Europe- CE Marking in Europe for medical devices- Medical dev	ice
labelling: EU Regulation MDR 2017/745- Product labelling and QMS—EU MDR	
Module: 5         Regulations for Medical Devices in India         7 Hours	
Classification of medical device in India- Regulations in India- Central Drugs Standard Cont

**Approved by Academic Council** 25 Aug 2023 BIOSTATISTICS Course code С L Т Р 23BM2007 3 0 3 0 **Course Objectives:** Enable the student to : 1. Correlate the concepts and methods in statistics relevant to biomedical data. 2. Interpret biomedical data using statistical techniques. 3. Analyse data using the principles of experimental design. Course Outcome The student will be able to : 1. Interpret the statistical concepts in biomedical engineering. 2. Demonstrate probability theory to model healthcare data. 3. Implement estimation methods and hypothesis test in biostatistical investigations. Apply statistical methods to design and conduct experiments in biomedical research. 4. 5. Illustrate the principles and properties of chi-square distribution. 6. Apply ethical principles in the use of statistical methods and the reporting of statistical findings. **Introduction to Biostatistics and Descriptive Statistics** Module: 1 7 Hours Measurement and Measurement Scales - Sampling and Statistical Inference - Scientific Method and the Design of Experiments - Computers and Biostatistical Analysis. Descriptive Statistics - Ordered Array -Grouped Data: The Frequency Distribution - Measures of Central Tendency - Measures of Dispersion Module: 2 **Probability Concepts and Distribution** 8 Hours Overview of Probability Concepts - Calculating the Probability of an Event - Bayes' Theorem, Screening Tests. Probability Distributions of Discrete Variables: The Binomial Distribution - The Poisson Distribution - Continuous Probability Distributions - The Normal Distribution - Normal Distribution Applications Module: 3 **Estimation and Hypothesis testing** 7 Hours Probability concepts and rules - Random variables and probability distributions - Estimation and hypothesis testing - Confidence intervals Parametric and non-parametric tests - Power and sample size calculations. Hypothesis Testing - Paired Comparisons - A Single Population Proportion - Difference **Between Two Population Proportions** Module: 4 **Experimental Design** 8 Hours Analysis of variance (ANOVA) and its applications - Completely Randomized Design - Randomized Complete Block Design - Repeated Measures Design - Factorial Experiment - Regression Model - Sample Regression Equation - Evaluating the Regression Equation - Correlation Model - Correlation Coefficient Module: 5 **Chi-square Distribution and Analysis of Frequencies** 8 Hours The Mathematical Properties of the Chi-Square Distribution - Tests of Goodness-of-Fit - Tests of Independence - Tests of Homogeneity - The Fisher Exact Test - Relative Risk, Odds Ratio, and the Mantel-Haenszel Statistic. Case Studies on Chi-square distribution in healthcare applications: Patient Treatment Outcome, Assessing the Association between Smoking & Lung Cancer – Case Study on the analysis of frequencies in healthcare applications: Disease Distribution in a Population Module: 6 **Survival Analysis and Vital Statistics** 7 Hrs Time-to-Event Data and Censoring - Kaplan-Meier Procedure - Comparing Survival Curves - Cox Regression: The Proportional Hazards Model. Vital Statistics: Death Rates and Ratios - Measures of Fertility- Measures of Morbidity. Case Studies on Survival Analysis: Cancer Survival Analysis, Analysis of Time-to-Recovery from specific disease. Case Studies on Vital Statistics: Infant Mortality Rate (IMR) Analysis – Maternal Mortality & Socioeconomic Disparities Total Lectures 45 **Text Books** Daniel, W. W, Cross, C. L, " Biostatistics: Basic Concepts and Methodology for the Health 1 Sciences. India", Wiley, 2018. Streiner, D. L., Norman, G. R., "Biostatistics: The Bare Essentials", United States: People's 2. Medical Publishing House, 2014.

23	BM2012	ENGINEERING PRACTICES AND GRAPHICS	0	0	4	2		
1		LABORATORY				_ <u>~</u>		

Course Objectives: Enable the student to

- 1. Design and fabricate printed circuit boards.
- Understand the fundamentals of DC sources and components.
- 3. Apply computer software for the preparation of engineering drawing.

Course Outcomes:

The student will be able to:

- 1. Operate the measuring instruments.
- 2. Design and fabricate the printed circuit board.
- 3. Analyze DC Sources and components.
- 4. Create engineering drawings using CAD software.
- 5. Evaluate the parts according to standard practice.
- 6. Sketch the orthographic and isometric views of objects in CAD environment.

# List of Experiments:

- 1. Study of Measuring Instruments (Voltmeter, Ammeter, Oscilloscopes, Multimeter)
- 2. Design of printed circuit board
- 3. Fabrication of printed circuit board
- 4. Study of DC Power Sources

- 5. Troubleshooting of DC Motors
- 6. Study of Mechanical components of Medical Equipment.
- 7. Drawing aids: snap, grid, limits and Osnap.
- 8. Application of modifying commands.
- 9. Methods of drawing lines, circles and arcs.
- 10. Application of lines, arcs and circles to draw simple geometries.
- 11. Dimensioning, hatching methods to show different materials, title block and layers.
- 12. Isometric view of primitive solids and combination of primitive solids.

23BM3001 MEDICAL INSTRUMENTATION DESIGN	3	0	0	3						
Course Objectives:										
Enable the student to:										
1. Understand the fundamentals of human physiology system and its functions.										
2. Learn the fundamental concepts of physiological parameters measurement.										
3. Apply the concepts of various instrumentation techniques for biomedical applications	s.									
Course Outcomes:										
The student will be able to:										
1. Identify the basic functions of various human physiological systems.										
2. Analyze the features of electrodes and the interfacing of circuits.										
3. Categorize the design procedures involved in neurological signal analysis.										
4. Analyze working of various measurement instruments related to cardiac activity.										
5. Design an suitable Instrumentation system for respirating analysis.										
6. Assess the medical device safety and testing of devices.										
Module: 1 Introduction to Human Physiology	8 H	our	S							
Circulatory system - cardiovascular system-central nervous system - respiratory syst										
skeletal system - digestive system - excretory system - sensory organs - voluntary and inv	olunt	tary	acti	on.						
Module: 2 Biopotential and Measurements	7 H	our	S							
Cell and its structure – resting potentials – action potentials – bioelectric potentials – n										
potentials and their recording - Electrode theory - bipolar and Unipolar electrode-surf										
electrode impedance -equivalent circuit for extra cellular electrodes- micro electrodes.	basic	pri	ncip	les						
of ECG, EEG, EMG.

23BM3004	MEDICAL INAGE PROCESSING LADORATORY	0	0	4	2			
Course Objecti	Course Objectives:							
Enable the student to:								
1. Differen	tiate with various medical image data.							

- 2. Develop Programs for image processing using MATLAB.
- 3. Simulate medical images using various methods.

### Course Outcomes:

The student will be able to:

- 1. Demonstrate the manipulation of images for the specified requirement.
- 2. Identify the region of interest using segmentation and morphological operations.
- 3. Modify the image geometry for specific purpose.
- 4. Show the effect of rending on given image.
- 5. Indicate the results of fusion and registration of images.
- 6. Demonstrate image reconstruction using the given data.

#### LIST OF EXPERIMENTS

- 1. Basic operations on medical images
- 2. Enhancement of medical images
- 3. Image segmentation using thresholding and region based methods
- 4. Morphological operations on medical images
- 5. Translation and rotation of medical images
- 6. Image reformatting and tracking
- 7. Volume rendering and Surface rendering
- 8. Methods for medical image fusion using artificial intelligence
- 9. Image registration methods using deep learning
- 10. Image reconstruction using machine learning
- 11. Object Detection using deep learning.
- 12. Decomposition and reconstruction of medical images using wavelets.
- 13. Mini Project

Enable the st	Enable the student to:							
1. Discover the concepts of Embedded system and its peripherals.								
2. Dest	gn various programming techniques in real time applications.							

Solve interfacing issues related to embedded system design in healthcare.

#### **Course Outcomes:**

The student will be able to:

- 1. Develop an embedded C program for various I/O interfacing in medical devices.
- 2. Illustrate the hardware timer concepts for providing delay.
- 3. Develop real time embedded systems for biomedical applications.
- 4. Apply internet protocols for data transmission.
- 5. Design interfacing circuits to acquire real time data and process it using software.
- 6. Experiment integration the sensor with embedded processor for online monitoring.

#### LIST OF EXPERIMENTS

- 1. Port Programming
- 2. Input and Output device Interfacing
- 3. Concept of timer for generating hardware delay
- 4. PWM generation
- 5. Biosensor Interfacing
- 6. ON/OFF Relay control
- 7. Low Power wireless transmission of biosignals
- 8. Analysis of biosignals and image with Raspberry Pi using python
- 9. Configuring Raspberry Pi processor for cloud storage and interfacing of biosignals
- 10. Design of Online Patient monitoring system -IoT implementation
- 11. Mobile phone-based design of medical devices for continuous monitoring system
- 12. Web server-based monitoring and control

Course code         HOSPITAL SUPPLY CHAIN MANAGEMENT         L         T	P C
23BM3007 3 0	0 3
Course Objectives:	
Enable the student to:	
1. Interpret the fundamentals of health care delivery services.	
2. Learn the procedures in maintenance of equipment.	
3. Summarize Hospital support systems.	
Course Outcomes:	
The Student will be able to:	
1. Comprehend the principle of supply chain management in healthcare.	
<ol> <li>Classify the types of hospitals and functions.</li> <li>Modify the design to develop summat systems</li> </ol>	
<ol> <li>Modify the design to develop support systems.</li> <li>Infor the most shallonges in environment and market trends.</li> </ol>	
4. Infer the most challenges in environment and market trends.	
5. Evaluate the systems based on the safety criteria to environment.	
6. Create the methodology for medical equipment maintenance.	
	Hours
Goals-importance – Drivers for supply chain – customer service – monetary value –integrating h	ealthcare-
demand planning – supply chain process.

# Course code 3D PRINTING FOR BIOMEDICAL APPLICATIONS

L T P C

23BM3010	3	0	0	3
Course Objectives:	5	U	U	5
Enable the student to:				
1. Learn 3D printing in Manufacturing.				
<ol> <li>2. Recommend the appropriate use of 3D printing technology.</li> </ol>				
<ol> <li>Comprehend the need of 3D Printing in Bio-medical field.</li> </ol>				
Course Outcomes:				
The student will be able to:				
1. Summarize the 3D printing in manufacturing.				
<ol> <li>Interpret the design process.</li> </ol>				
3. Identify materials for 3D printing.				
<ol> <li>Paraphrase the advantages and limitations of each 3D printing technology.</li> </ol>				
5. Design and print objects for human implants.				
<ol> <li>Evaluate the advantages of 3D printing for medical applications.</li> </ol>				
Module: 1 Introduction to 3D Printing	81	Hour	'S	
Introduction, Process, Classification, Advantages, Additive, Conventional Manufact				es.
Applications, Research achievements in printing deposition, Technical challen				
Applications of Printing Processes.	·-~ -	r		-0,
Module: 2 Development of 3D Printing Technology	71	Hour	'S	
3D Printing: Principle, basic process, types of printing, process capabilities, material sys				ed.
Liquid based and powder based 3DP systems, Shape Deposition Manufacturing (SDI				
basic process, shape decomposition, mold SDM and applications. Selective Laser Meltin				
melting – Rapid manufacturing.	<i>&gt;</i> ,

# 21BM3031

**Course Objective:** Enable the student to:

- 1. Know the concepts of medical image processing and filtering techniques
- 2. Learn about the Segmentation techniques used in Medical image processing
- Understand the applications of medical image processing for Diagnosis. 3.

### **Course Outcomes:**

The student will be able to:

- 1. Summarize the concepts of digital image processing techniques.
- 2. Identify the noise and apply filters for medical image applications
- 3. Determine the restoration for medical images.
- 4. Implement segmentation and evaluation techniques.
- 5. Apply the Featuring engineering on medical images.
- Develop systems for medical image processing and analysis for diagnosis 6.

		course, students will be able to:				
		ndamentals of signal processing				
2. I	dentify the eff	ect of IIR Digital filter design				

Illustrate the various applications of IIR filter
 Discuss about the FIR Filter design and applications

5. Interpret the various methods to analyze biosignals
6. Explain the biosignal processing concepts for real time applications
Module: 1Fundamentals of Signal Processing7 Hours
Sampling and aliasing, simple signal conversion systems, Spectral analysis, FFT -decimation in time
algorithm, Decimation in Frequency algorithm, Different types of bioelectric signals and its basic
characteristics.
Module: 2IIR Digital Filter Design8 Hours
Impulse invariant method, Bilinear transformation method, Design of bilinear transformation method using
Butterworth and Chebyshev techniques, Design of impulse invariant method using Butterworth and
Chebyshev techniques
Module: 3IIR Digital Filter Applications7 Hours
Warping and pre-warping effect, frequency transformation, Frequency domain filters- Introduction to
adaptive filters – Removal of Artifacts in ECG, Maternal – Fetal ECG
Module: 4FIR Digital Filter Design and Its Applications8 Hours
Characteristics of FIR filter, FIR filter design using windowing techniques- Rectangular, Hamming, Hanning
and Blackmann windows, Time domain filters- synchronized averaging, moving average filters
Module: 5Analysis of Biosignals7 Hours
P-wave detection, QRS complex detection-derivative based method, Pan Tompkins algorithm, Template
matching method, Signal averaged ECG, Analysis of heart rate variability-time domain method and frequency
domain methods, Synchronized averaging of PCG envelopes, Envelogram, analysis of PCG signal, EMG
signal analysis.
Module: 6Case studies in BSP8 Hours
ECG rhythm analysis, normal and ectopic ECG beats, analysis of exercise ECG, Analysis of respiration,
spectral analysis of EEG signals, Case studies- in ECG and PCG, PCG and carotid pulse, ECG and Atrial
Electrogram, Cardio respiratory interaction, EMG and Vibromyogram (VMG).
Total Lectures 45 Hours

Course code	MEDICAL ETHICS AND STANDARDS	L	Т	Р	С			
22BM2002		2	0	0	2			
Course Objective:								
To impart know	wledge on							

1. Achieve familiarity with some basic ethical framework& understand how these ethical frameworks can be helpful in medical ethics.

	NUE, UGC & HCT6 Ageneed
2. Know about the legal and ethical principles and application of these principles in hea	lth care
settings	
3. Gain knowledge about the medical standards followed in hospitals.	
Course Outcomes:	
After completion of course, students will be able to:	
1. Identify the scope of medical ethics	dana
<ol> <li>Illustrate the concepts of ethical theories and moral principles for the healthcare prov.</li> <li>Paraphrase the purpose of medical standards</li> </ol>	iders.
<ol> <li>Paraphrase the purpose of medical standards</li> <li>Acquire knowledge about hospital accreditation standards</li> </ol>	
<ol> <li>Summarize the importance of hospital safety standards</li> </ol>	
<ol> <li>6. Recommend the suitable principles of medical equipment safety standards in hospital</li> </ol>	s
Module: 1         Introduction to Medical Ethics	7 Hours
Definition of Medical ethics, Medical Ethics Vs Bioethics, Scope of ethics in medicine, Amer	
Association code of ethics, CMA code of ethics- Fundamental Responsibilities, The Doctor and	
The Doctor and the Profession, Professional Independence, The Doctor and Society.	
Module: 2 Ethical Theories and Moral Principles	8 Hours
Theories-Deontology & Utilitarianism, Casuist theory, Virtue theory, The Right Theory. P	
Maleficence, Beneficence, Autonomy, Veracity, Justice. Autonomy & Confidentiality issu	
practice, Ethical Issues in biomedical research, Bioethical issues in Human Genetics &	Reproductive
Medicine	
Module: 3 Medical Standards	7 Hours
Evolution of Medical Standards - IEEE 11073 - HL7 - DICOM - IRMA - LOINC - HIPP	A –Electronics
Patient Records – Healthcare Standard Organizations - Evidence Based Medicine	-
Module: 4 Hospital Accreditation Standards	8 Hours
Accreditation - JCI Accreditation & its Policies - JCAHO (Join Commission on Accreditation	
Organization) - JCIA (Joint Commission International Accreditation), Patient centered standa	rds, Healthcare
Organization management standards	
Module: 5 Hospital Safety Standards	7 Hours
Life Safety Standards- Protecting Occupants, Protecting the Hospital From Fire, Smoke, and H	
Individuals From Fire and Smoke, Providing and Maintaining Fire Alarm Systems, Systems for Fires Environment of Care Standards-Minimizing EC Risks, Smoking Prohibitions, Manag	
Material and Waste, Maintaining Fire Safety Equipment, Features, Testing, Maintaining,	
Medical Equipment.	and mspecting
Module: 6 Medical Equipment Safety Standards	8 Hours
General requirements for basic safety & essential performance of medical equipment. IEC 6	
Base Standard-general requirement of electrical medical devices, Collateral Standards I	
protection & programmable medical device system, Particular Standards-type of medical device

Course code	HOSPITAL MANAGEMENT	L	Т	Р	С
22BM2003		3	0	0	3
Course Objectiv	e:				
To impart know	vledge on				
1. The need	and significance of Clinical Engineering and Health Policies.				
2. The train	ing strategies, human resources and hospital design.				
3. The infor	rmation technology and needs of medical records.				
<b>Course Outcome</b>	es:				
At the end of the	his course, students will be able to:				
1. Identify	he need for clinical engineering in healthcare system.				
2. Summari	ze the use of various health policies.				
3. Demonst	rate how high quality training is delivered for technical staff.				
4. Evaluate	the hospital designing and disposal of medical waste.				
5. Debate th	ne needs of hospital information system				
6. Apply th	e use of computer and information technology in medical data				
Module: 1	Clinical Engineering		8 H	ours	
Clinical engine	eering program, Educational responsibilities, Role to be performed by t	hem	in ho	spita	l,
Staff structure	in hospital. Classifications of hospital, scope of hospital.				
Module: 2	National Health Policies		7 H	ours	
National health	policy, Five year plans, Health organization in country, state, Projects,	scher	nes, I	Iealt	a
education, Hea	Ith insurance				
Module: 3	Training and Management of Human resources		8 H	ours	
Difference be	tween hospital and industrial organization, Levels of training, Ste	ps o	of tra	ining	,,
Developing Tr	aining program, Evaluation of training, Wages and salary, Employee ap	prais	al m	ethod	
	e management in hospital.	•			
Module: 4	Hospital Design		7 H	ours	
Pilot study, H	ospital committee, selection of location, survey, hospital consultant,	fund	s, po	licies	,
license, scope	for expansion, commissioning the hospital, waste disposal.		•		
Module: 5	Hospital Information System		8 H	ours	
Structure, bene	fits, selection of software, modules in Hospital information system, Con	mpute	er int	egrat	on,
case study: IoT		-		•	
Module: 6	Computers and Information Technology		7 H	ours	
Computer applica	tion in ICU, Picture Archival System for Radiological images department	nt, Cl	inica	1	
	stration, Patient data and medical records, communication.

Course code         MODELLING OF PHYSIOLOGICAL SYSTEMS         L         7			Р	С	
22BM2004	3	0	0	3	
Course Objective:					
To impart knowledge on					
1. Basic ideas related to modeling.					
2. Different modelling techniques of physiological systems.					
3. Various regulatory systems of the human body.					
Course Outcomes:					
At the end of this course, students will be able to					
1. Analyze the concepts of modelling					
2. Differentiate the dynamics and static characteristics of physiological systems					
3. Assemble the various concepts in modelling of circulatory system					
4. Design and perform the modelling for physio thermo regulatory systems					
5. Create various models for human filtration system					
6. Evaluate the mass-balance concept for biological system					
Module: 1 Basics of physiological control systems			ours		
Systems Analysis, examples of physiological control systems, differences between	eng	gineer	ring	and	
physiological control systems. Generalized system properties, mathematical approach,	elect	rical	anal	ogs,	
linear models, lung mechanics, muscle mechanics, distributed parameter versus lumped p	oaran	neter	mode	els	
			ours	;	
Static and dynamic analysis of physiological systems: regulation of cardiac output, blood	gluco	se re	gulat	ion,	
chemical regulation of ventilation, electrical model of neural control mechanism	-		-		
Module: 3 Modelling of Circulatory System		8 H	ours	i	
Circulatory System: Physical, chemical and rheological properties of blood, problems as	socia	ted w	vith e	xtra	
corporeal blood flow, dynamics of circulatory system.					
Module: 4 Modelling of Regulatory System		8 H	ours	i	
Thermal Regulatory System: Parameters involved, Control system model etc. Biochemis	try of	f dige	estion	ı,	
types of heat loss from body, models of heat transfer between subsystem of human body	like s	skin c	core,		
etc. and systems like within body, body, environment, etc.					
Module: 5 Modelling of Filtration In Human Body		7 H	ours	;	
Ultra-Filtration System: Transport through cells and tubules, diffusion, facilitated diffusion	ffusic	on an	d ac	tive	
transport, methods of waste removal, counter current model of urine formation in nephron,					
loop.					
Module: 6         Modelling and Regulation of Respiration		7 H	ours		
Respiratory System: Modelling oxygen uptake by RBC and pulmonary capillaries, Mass b	alan	cing l	oy lui	ngs,	
Gas transport mechanisms of lungs, oxygen and carbon dioxide transport in blood and tis			5	0 /

Course code	Course code     BIOMATERIALS AND ARTIFICIAL ORGANS     L     T     P				С
22BM2006		3	0	0	3
Course Objective:					
To impart knowledge on					
1. Learn the Concepts, Classification, Properties, and Structural variations in biomaterials.					
2. Understand the testing of implants and cell-interfacing materials.					
3. Know the	he applications of biomaterials in Artificial Organs and their development.				

A 4 4*	e Outcom	·S:	
At the	end of the	course, the student will be able to:	
1.	Identify	he structural variations in biomaterials.	
2.	Determin	the various properties of biomaterials.	
3.		the methods for testing implants	
4.		e cell-biomaterial interactions for constructing artificial organs.	
5.		he Interfacing materials and ethical implications.	
6.		e biomaterials in healthcare sectors.	
Modul		Structural Variations in Biomaterials	7 Hours
		fication and properties of bio-materials, Surface, bulk, mechanical and biolog	rical. Types of
		logical response to biomaterials; Crystal structure of metals; Crystal structure	
		terials; General structure of polymers; Synthesis of polymers. Bending pro	
		ties – creep properties of polymers; Influence of porosity and the degradation	
		uction to fatigue.	or meenumeur
Modul		Properties of Biomaterials	8 Hours
		nd blood compatibility. Surface modification of biomaterials – plasma treatme	
		, self-assembled monolayers (SAMs), Langmuir – Blogett films and covalent	
		properties that affect biomaterial surface interaction; biomaterial surface inter	
		with proteins; Protein adsorption kinetics; DLVO model for cell adhesion; A	
		ects of cell-material interactions – agar diffusion assay, adhesion assays and n	
	ine the end	icis of cent-material interactions – agar unfusion assay, adhesion assays and n	Ingration
assays.		D'	0.11.
Modul		Biocompatibility	8 Hours
		-Toxicology, Biocompatibility, Mechanical and Performance Requirements	
		ciated infection. Cytocompatibility evaluation laboratory, Tissue compatibil	
	•	ocompatibility evaluation laboratory, Sterility evaluation laboratory, H	listopathology
		tory, Physiochemical evaluation laboratory.	0.11.
Modul		Implantation	8 Hours
		r inflammatory response due to biomaterial implantation; Fibrous encapsulation	
			on of healing
	•	tures of soft tissue implants; Metallic Implant materials, Polymeric Implant m	on of healing

22BM2008		3	0	0	3	
<b>Course Objectiv</b>	e:					
To impart knowle	edge on					
1. The field of	biomedical engineering and role of biomedical engineers in society.					
	es of various diagnostic, therapeutic equipment.					
	asic ethical framework and medical standards to be followed in hospitals.					
<b>Course Outcom</b>						
The Student will	be able to					
1. Interpret the	role of biomedical engineering in society					
2. Demonstrate	the principles of various diagnostic devices.					
3. Identify the v	various techniques used in diagnosis though imaging.					
4. Describe the	working principles of various therapeutic and assist devices.					
5. Outline device	ce specific safety goals and standards.					
6. Illustrate the	Illustrate the concepts of ethical theories and moral principles for the health professions.					
Module: 1	Introduction		7 H	ours		
Historical Persp	ective-Evolution of modern healthcare system-Modern Healthcare	sys	stem-	Role	of	
	neers in various domain -Recent advances in Biomedical Engineering-Pro	ofessi	ional	statu	s of	
biomedical engin	eering-Professional Societies for Biomedical Engineering.					
Module: 2	Fundamentals of Medical Instrumentation		8 H	ours		
	ysiology - Sources of biomedical signals- basic medical instrumentation					
	irements Intelligent Medical Instrumentation Systems - PC based Medi	cal I	nstru	ments	3 -	
General constrain	nts in design of medical instruments.					
Module: 3	Diagnostic Imaging			ours		
X-rays, Nuclear	Medical Imaging-Positron Emission Tomography-Magnetic Resonance	Imag	ing S	cann	ers-	
Diagnostic Ultras	sound- Thermal imaging systems.					
Module: 4	Introduction to Biomedical Equipment			ours		
ECG – EEG - Ca	rdiac Pacemakers - Cardiac Defibrillators - Haemodialysis Machines-Ar	tificia	al Kio	dney-		
Dialyzers- Ventil	ators-Humidifiers, Nebulizers and Aspirators- Anaesthesia Machine.					
Module: 5	Medical Safety Standards		7 H	ours		
Medical standard	s and regulations - Institutional Review Boards - Good Laboratory Pract	ices	-Goo	d		
Manufacturing P	ractices -Human factors.					
Module: 6	Ethical Practices in Health Care		7 H	ours		
	ics-A Definition of terms, Human Experimentation-Ethical issues in feasi			ies,		
Ethical issues in	emergency use, Ethical issues in treatment use-Codes of ethics for bio en	ginee	ers.

Course Objective:						
To impart knowle	To impart knowledge on					
1. The integration of hardware circuits with software						
2. The conc	2. The concepts of programming in an IDE and download it into a processor					

3. The practical aspects of data acquisition and analysis

#### **Course Outcomes:**

The Student will be able to

- 1. Design interfacing circuits to acquire real time data and process it using software
- 2. Develop real time embedded systems for biomedical applications
- 3. Apply communication protocols for data transmission
- 4. Create an embedded C program for various I/O interfacing

5. Implement timer concept for providing real time delay					
6. Integrate the sensor with microcontrolle					
List of Experiments:	· · ·				
8085 Processors					
1. Arithmetic Operations: Addition of 8 Bit N	Sumbers Using 8085				
2. Arithmetic Operations: Subtraction of 8 Bit Numbers Using 8085					
3. Multiplication and Division of Two Number	ers Using 8085				
4. Sorting of Numbers in an Array	4. Sorting of Numbers in an Array				
5. Block Transfer Using 8085	5. Block Transfer Using 8085				
Atmega 328P Microcontroller					
6. Activation of LED					
7. Temperature Sensor Interfacing					
8. Distance Measurement Using Ultrasonic S	ensor				
9. ECG sensor Interfacing					
10. PWM Signal Generation					
11. DC Motor Interfacing					
12. Stepper Motor Control					
Keil µVision : 8051 & ARM Microcontroller					
13. Study the concept of Timer					
	14. LED Display				
15. Relay Control					
16. Seven Segment Display Interfacing

22BM2011		3	0	0	3	
<b>Course Objec</b>	tive:					
To impart know	wledge on					
1. Biopo	tential measurement techniques					
2. Bioele	ectric amplifiers, filters and isolation circuits					
	cation of signal conditioning in biomedical field					
Course Outco	Course Outcomes:					
	on of course, students will be able to:					
	1. Identify the origin and characteristics of various biosignals and its acquisition.					
	the signal conditioning circuits using operational amplifiers for biomedical					
•	3. Analyze and design bio filters and isolation circuits used in medical signal conditioning.					
	prase the elements of data acquisition system with analog and digital circuit	s				
	the various circuits for designing medical equipments using different ICs					
6. Recon	nmend the various safety standards and circuit design for biomedical applic	ations	5.			
Module: 1	Biopotential Measurement			ours		
-	and bioelectric currents, Nature of Bio Electricity: Bioelectric Currents,					
	ential, Action potential, Detection of Bio electric events, bio-electrode	and e	electr	ode-s	skin	
	for bioamplifiers and biosignal Conditioning.					
Module: 2	<b>Operational Amplifiers and Its Biomedical Applications</b>		-	ours		
	mplifiers Basic opamps parameters, Ideal and practical opamp, Op amp I					
	opamp for biosignals conditioning - Adder, subtractor, analog integra	tor, o	diffei	rentia	.tor,	
	Transimpedance amplifier.					
Module: 3	Basic Filters and Isolation Circuits		-	ours		
	of filtering, Active filters - Low pass filter, High pass filter, Band pass filter					
	d second order active filters, Instrumentation amplifier, Types of isolati	on a	mplif	ïers	and	
optocouplers.

22BM2012	3	0 0 3
<b>Course Objectiv</b>	ve:	
To impart knowl		
	sic knowledge about architecture of processor & controller.	
	erfaces in processors and instruction sets in controller.	
	cessity of controller in real time applications.	
Course Outcom		
-	n of course, students will be able to:	
	rize the microprocessor organization and its evolution.	
-	et the various instruction sets and programming language of 8085.	
	e their knowledge in designing a system using 8051	
	re controller / processor architecture and features.	
	the peripheral devices with controller.	
6. Simulate	te the real time system using integrated development environment. Introduction to Microprocessor	7 Hours
	but digital computer, System architecture- Von Neumann and Harvard architecture	
KISC processor,	; Fundamentals of Microprocessor, Hardware Architecture, Functional building	ig blocks of

RISC processor, Fundamentals of Microprocessor, Hardware Architecture, Functional building blocks of 8085 microprocessor, 8085 pin configurations and functions, Definition of embedded system and its characteristics.

Module: 2	Instruction set and assembly language programming of 8085	8 Hours				
Instruction formats, addressing modes, instruction set- Data transfer, data manipulation & control instructions,						
Assembly language format, Simple programs.						
Module: 3	8051 microcontrollers	8 Hours

6. Demonstrate mathematical tools in characterization of physiological system.

Module: 1	Introduction to Signals	7 Hours

Basics of Biomedical Signals and systems- representation -Sampling and quantization-Periodic,	, aperiodic and
transient, stationary and non- stationary signals. Two- dimensional signals-Images. Linear and Non 1	Linear systems-
Linear System theory- Stability of systems	
Module: 2 Fourier Transform	8 Hours
Time and frequency -domain signal representatives, Fourier series analysis, Symmetry, Frequency	
representation, The continuous Fourier transform, The discrete Fourier series and discrete Fourier	
Fourier transform and power spectrum: Implications and applications. Spectral averaging, Station	narity and time-
frequency Analysis	
Module: 3         Joint Time-Frequency Analysis of Biomedical Signals	7 Hours
The Short- Term Fourier Transform. The Gabor and Adaptive Gabor Transforms, The Wigner-Vi	
Wigner Transforms, Cohen's General Class of JTF Distributions JTFA Using Wavelets, Application	ons of JTFA to
Physiological Signals	0.11
Module: 4         Linear Systems is the Frequency Domain	8 Hours
The transfer function. The response of system elements to sinusoidal inputs-phasor analysis. The tra	
spectral plots. Linear systems analysis in the complex frequency domain: The Laplace transform and	
of Transients - The Laplace transform, The inverse Laplace transform, Laplace analysis - the La	
function, Nonzero initial conditions- initial and final value theorems, The Laplace domain and the frequencies of Laplace Transform	uency domain,
Application of Laplace Transform	7 Hours
Module: 5Linear Systems In The Time DomainConvolution and simulation, Linear system analysis: Applications, Linear filters, filter types, Filter att	
filter order, Filter initial sharpness, Basics of Z Transform. The digital transfer function and the Z-transf	
transfer function	omi, me uigitai
Module: 6         Biomedical Signals And Systems Analysis	8 Hours
Concurrent, coupled and correlated processes, filtering for removal of artifacts, event detection, wave a	
form complexity, analysis of non-stationary signals. Mathematical Tools Used in the characterization of	
Systems. Complex systems in biology and medicine - properties and examples	or i hysiological

То	impart know	vledge on					

To impart knowledge on

- 1. Working with various medical image data
- 2. Usage of Simulation tools for image processing
- 3. Process medical images using various methods

#### **Course Outcomes:**

At the end of this course, students will be able to:

- 1. Demonstrate basic operations on a given image to obtain specific output
- 2. Produce enhanced images using spatial and frequency domain filters
- 3. Assess the performance of image restoration techniques under given condition
- 4. Identify the object in a given image through segmentation
- 5. Analyze the effect of image compression on given image data
- 6. Compute the features useful for image analysis

### LIST OF EXPERIMENTS

- 1. Basic operations on images
- 2. Color conversion of images
- 3. Image enhancement using point operations & filters
- 4. Image restoration in the presence of noise and degradation
- 5. Image segmentation using edge and region based methods
- 6. Morphological operations on images
- 7. Multiresolution analysis of images using wavelets
- 8. Image compression using lossless and lossy methods
- 9. Histogram processing of Images
- 10. Extraction of shape and texture features from an image
- 11. Image pseudo coloring
- 12. Image capturing and display using thermal camera.

1.         The basic of sensors and its applications in healthcare.           2.         The principle and operation of different medical transducers.           3.         The concept of bio sensors and comprehend the function of various receptors in human body.           Course Outcomes:           After completion of course, students will be able to:         1.           1.         Identify the need of a closed loop system with feedback and appreciate the use of sensors.           3.         Develop advanced medical sensor based on the basic transduction principles.           4.         Demonstrate the advanced sensor approach based on light and sound           5.         Apply the suitable design criteria for developing a medical sensor for a particular application.           6.         Summarize the use of electrodes in measuring electrical potential in human body           Module: 1         Introduction to Measurement         8 Hours           Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy Precision, Respotducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Outpulmpedance. Dynamic Characteristics.         8 Hours           Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependent resistors, Capacitive sensors, Inductive sensors, Electronagnetic sensors.         8 Hours           Nodule: 3         Self-Generating Sensors         8 Hours           Nodule: 4	<b>Course Objectiv</b>	/e:						
2. The principle and operation of different medical transducers.     3. The concept of bio sensors and comprehend the function of various receptors in human body.     Course Outcomes:     After completion of course, students will be able to: <ol> <li>Identify the need of a closed loop system with feedback and appreciate the use of sensors.</li> <li>Interpret the errors in measurement by analyzing the performance characteristics of the sensors.</li> <li>Develop advanced medical sensors based on the basic transduction principles.</li> <li>Demonstrate the advanced sensor approach based on light and sound</li> <li>Apply the suitable design criteria for developing a medical sensor for a particular application.</li> <li>Summarize the use of electrodes in measuring electrical potential in human body</li> </ol> <li>Module: I Introduction to Measurement         <ol> <li>Renormatic Characteristics.</li> <li>Renormatic Characteristics.</li> <li>Renormatic Characteristics.</li> <li>Renormatic Characteristics.</li> </ol> </li> <li>Module: I Sensors Based on Transduction Principle 8 Hours         </li> <li>Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependent resistors, Capacitive sensors, Ilectromagnetic sensors.</li> <li>Module: 3 Self-Generating Sensors         <ol> <li>Self-Generating Sensors</li> <li>Sthours</li> </ol> </li> <li>Module: 4 Optical and Ultrasound Sensors.</li> <li>Study of Various corpuscles like Pacinian, functions and modelling, Chemoreceptor, hot and cold receptors baro- receptors, sensors for small, sound, vision, osmolality and test. 3. The concept of bio sensors and comprehend the function of various receptors in human body.         Course Outcomes:         After completion of course, students will be able to:         1. Identify the need of a closed loop system with feedback and appreciate the use of sensors.         3. Develop advanced medical sensors based on the basic transduction principles.         4. Demonstrate the advanced sensor approach based on light and sound         5. Apply the suitable design criteria for developing a medical sensor for a particular application.         6. Summarize the use of electrodes in measuring electrical potential in human body         Module: 1       Introduction to Measurement         8 Hours         Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics.         Module: 2       Sensors Based on Transduction Principle       8 Hours         Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependent resistors, Capacitive sensors, Inductive sensors, Electrochemical sensors, Signal conditioning for self generating sensors       8 Hours         Module: 3       Self-Generating Sensors       8 Hours         Module: 4       Optical and Ultrasound Sensors       8 Hours         Study of Various corpuscles like Pacinian, functions and modelling, Chemoreceptor, hot and cold receptors baro- re	1. The basi	c of sensors and its appli	cations in healthcare.					
Course Outcomes:         After completion of course, students will be able to:         1. Identify the need of a closed loop system with feedback and appreciate the use of sensors.         2. Interpret the errors in measurement by analyzing the performance characteristics of the sensors.         3. Develop advanced medical sensors based on the basic transduction principles.         4. Demonstrate the advanced sensor approach based on light and sound         5. Apply the suitable design criteria for developing a medical sensor for a particular application.         6. Summarize the use of electrodes in measuring electrical potential in human body         Module: 1       Introduction to Measurement         8 Hours         Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Outpu Impedance. Dynamic Characteristics.         Module: 2       Sensors Based on Transduction Principle       8 Hours         Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependen resistors, Capacitive sensors, Piezoelectric sensors, Electrochemical sensors, Signal conditioning for self generating sensors.       8 Hours         Nodule: 3       Self-Generating Sensors       8 Hours         Nodule: 4       Optical and Ultrasound Sensors       8 Hours         Nodule: 5       Biological sensors and Biosensors       7 Hours	2. The prin	ciple and operation of di	fferent medical transducers.					
After completion of course, students will be able to:         1.       Identify the need of a closed loop system with feedback and appreciate the use of sensors.         2.       Interpret the errors in measurement by analyzing the performance characteristics of the sensors.         3.       Develop advanced medical sensors based on the basic transduction principles.         4.       Demonstrate the advanced sensor approach based on light and sound         5.       Apply the suitable design criteria for developing a medical sensor for a particular application.         6.       Summarize the use of electrodes in measuring electrical potential in human body         Module: 1       Introduction to Measurement       8 Hours         Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy       Precision, Resolution, Reproducibility, Sensitive, Drift, Hysteresis, Linearity, Input Impedance and Outpu Impedance. Dynamic Characteristics.       8 Hours         Module: 2       Sensors Based on Transduction Principle       8 Hours         Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependen resistors, Capacitive sensors. Inductive sensors, Electrochemical sensors, Signal conditioning for self generating sensors.       8 Hours         Module: 3       Self-Generating Sensors       8 Hours         Thermoelectric sensors, Piezoelectric sensors, Electrochemical sensors, Ultrasonic-based sensing method and applications.       9 total sensors of sensor sen	3. The cond	cept of bio sensors and co	omprehend the function of various receptors in I	human body.				
1.       Identify the need of a closed loop system with feedback and appreciate the use of sensors.         2.       Interpret the errors in measurement by analyzing the performance characteristics of the sensors.         3.       Develop advanced medical sensors based on the basic transduction principles.         4.       Demonstrate the advanced sensor based on the basic transduction principles.         6.       Summarize the use of electrodes in measuring electrical potential in human body         Module: 1       Introduction to Measurement       8 Hours         Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Outputmpedance. Dynamic Characteristics.       8 Hours         Module: 2       Sensors Based on Transduction Principle       8 Hours         Potentiometers, Strain gauges, Resistive Temperature Detectors (RTD), Thermistors, light-dependen resistors, Capacitive sensors, Hiczoteleve sensors, Electrochemical sensors, Signal conditioning for self generating sensors.       8 Hours         Module: 3       Self-Generating Sensors       8 Hours         N Optical techniques, General principles of optical sensing, Fiber-optic basics, Fiber-optic senso technologies and applications. Fundamentals of ultrasonic-based sensors, Ultrasonic-based sensing method and applications.       7 Hours         Module: 5       Biological sensors and Biosensors       7 Hours         Study of V

<b>Course Code</b>	MEDICAL	INTERNET OF THINGS	L T P	С	
22BM2022			3 0 0	3	
<b>Course Objectiv</b>	e:				
To impart knowle	edge on :				
1. The nec	cessary and practical knowled	dge of components of Internet of Things			
2. The Kn	owledge on IoT protocols				
3. The cas	e studies related to healthcar	e applications of IoT.			
<b>Course Outcome</b>	es:				
After completion	of course, students will be a	ble to:			
1. Summa	rize internet of Things and it	s hardware and software components			
2. Interfac	e I/O devices, sensors & cor	nmunication modules			
3. Paraphi	ase the data and control devi	ces			
-	et the data analytics and supp				
-	e the Case studies on IoT app	-			
•	e real life IoT based medical

Course Code SIGNALS CONDITIO	NING CIRCUITS LABORATORY	L	Т	Р	С	
22BM2023		0	0	2	1	
Course Objective:						
To impart knowledge on						
1. Design of filters and amplifier circu	uits for bioelectric amplifiers.					
2. Different preamplifiers used for an	plifying the bio signals.					
3. Application of signal conditioning						
Course Outcomes:						
At the end of this course, students will be abl	e to					
1. Summaries the principles of variou						
1 1	nd various signal conditioning circuits for bi	osign	als			
acquisition.	6	0				
3. Demonstrate the basic concepts for	filtering of bio signals					
	d digital interfaces for signal conversion					
5. Select suitable circuits to design va						
-	cuit design for ECG, EMG, EEG, etc.					
LIST OF EXPERIMENTS						
1. Study of basic digital logic used in	bio-signal conditioning					
2. Study of different data storage flip-						
3. Design of ADC and DAC circuits	1					
4. Design of basic op-amp circuits for	bio-signal processing					
5. Design of wave shaping circuits						
6. Instrumentation amplifier for ECG	amplification					
7. Design of constant current source a						
8. Design of pre-amplifier circuit	1					
9. Design of medical isolation amplifi	ier					
10. Biosignal data acquisition system						
11. Design of pacemaker circuit						
12. Design of active filters for biosigna	al acquisition (PPG Signal Acquisition)

BIOMEDICAL SENSORS AND TRANSDUCERS						

Course Code BIOMEDICAL SENSORS AND TRANSDUCERS LABORATORY		L	Т	Р	С
22BM2024		0	0	2	1
Course Objective:					
To impart l	knowledge on				
1.	1. To introduce the practical aspects of various medical transducers and their characteristics.				
2.	2. To impart knowledge in measurement of Resistance, Inductance and Capacitance using				
	bridges.				
3.	3. To improve the skills in calibrating analog meters.				
Course Ou	Course Outcomes:				
		1			

At the end of this course, students will be able to

- 1. Summarize the method of calibration of basic instruments.
- 2. Analyze the performance characteristics of different sensors.
- 3. Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- 4. Apply the suitable design criteria for developing a medical sensor for a particular application.
- 5. Develop advanced medical sensors based on the basic transduction principles.
- 6. Predict the qualitative performance of advanced medical sensors.

# LIST OF EXPERIMENTS

- 1. Blood Pressure Measurement
- 2. Heart Sound Measurement PCG KIT
- 3. Heart Rate Measurement
- 4. Pulse Measurement using Doppler Ultrasound
- 5. Angle measurement Using Potentiometer
- 6. Ultrasonic Blood flow measurement
- 7. Temperature Measurement Using Thermistor and LM35
- 8. Displacement Measurement Using LVDT
- 9. Displacement Measurement Using Capacitive Transducer
- 10. Weight Measurement Using Strain Gauge
- 11. Temperature Measurement Using Resistance Temperature Detector
- 12. Proximity Measurement Capacitance based

# Laboratory Experiments:

- 1. Waveform Generation
- 2. Use of While Loop, For Loop and Case Structure
- 3. Study of Sequential Programming : Flat Sequence and Stack Sequence
- 4. Use of Arithmetic Functions and Properties : Shift Register, Formula Node and Property Node
- 5. Data Collection and Console Design : Arrays and Clusters
- 6. Data Storage Methods using File I/O Read and Write File
- 7. Creation of Sub Program using Sub-VI
- 8. Data Communication using Queues and Notifiers
- 9. Measurement of Body Temperature
- 10. Calculation of Peak-to-Peak interval of PPG Signal
- 11. Measurement of Heart Rate
- 12. Lung Sound Cancellation from Heart Sound
- 13. Calculation of Pulse Height of each Pulse in PPG Signal
- 14. Measurement of Pulse Transit Time

Course code	ELECTRICAL AND ELECTRONICS FOR BIOMEDICAL ENGINEERS	L	Т	Р	С
22BM2029		3	1	0	4
Course Objective	e:				
To impart knowle	dge on				
1. basic con	cepts of electric circuits, magnetic circuits and wiring.				
2. operation	of AC and DC machines.				
3. working	principle of electronic devices and circuits.				
<b>Course Outcome</b>					
At the end of the	course the students will be able to				
	electric circuit parameters for simple problems				
	nd the working principle and application of electrical machines				
	the characteristics of analogue electronic devices				
	e basic concepts of digital electronics				
	the operating principles of measuring instruments				
6. Recollect	t the application of electronics in medical world				
Module: 1	ELECTRICAL CIRCUITS			Hours	
-Independent and sources only (Ste Value, Instantane	uit Components: Conductor, Resistor, Inductor, Capacitor – Ohm's Lav Dependent Sources – Simple problems- Nodal Analysis, Mesh analys ady state) Introduction to AC Circuits and Parameters: Waveforms, A ous power, real power, reactive power and apparent power, power fa- circuits (Simple problems only)	sis wi Averag	th Ind ge va	depen lue, F	dent MS
Module: 2	ELECTRICAL MACHINES		10	Hours	5
Applications, Wo Working principle Phase Induction M	Construction and Working principle-DC separately and Self Excited Generators, EMF Equation, Types and Applications, Working Principle of DC motors, Torque Equation, Types and Applications, Construction, Working principle and applications of Transformers, Three Phase Alternators, Synchronous Motors and Three Phase Induction Motors				
Module: 3	ANALOGUE ELECTRONICS			Hours	
	and Capacitor in Electronic Circuits- Semiconductor Materials: Silicon				
	Zener Diode -Characteristics Applications – Bipolar Junction Transf GBT – Types, I-V Characteristics and Applications, Rectifier and Invest		Biasi	ng, JF	ΈT,
Module: 4	DIGITAL ELECTRONICS		10H	Iours	_
	er Systems, Binary Codes, Error detection and Correction Codes, Co				
	tation of Logic functions-SOP and POS forms, K map representation			mizati	on
	nple Problems), block diagram of processor, Introduction to Embedded	syste			
Module: 5	MEASUREMENTS AND INSTRUMENTATION		10	Hours	5

Functional elements of an instrument, Standards and calibration, Operating Principle, types -Moving Coil and<br/>Moving Iron meters, Measurement of three phase power, Energy Meter, Instrument Transformers-CT and PT,<br/>DSO- Block diagram- Data acquisitionModule: 6BIOMEDICAL ELECTRONICS10 Hours

Magnetic Resonance Imaging, Electrocardiograph- Einthoven's ECG device-ECG graph paper, Sphygmomanometer, Digital Thermometers, Blood gas analyser, Stethoscope

Total Lectures 60 Hours

Course code		L	Т	Р	С			
21BM3001	MEDICAL INSTRUMENTATION DESIGN	3	0	0	3			
<b>Course Objective:</b>								
The student should be	e made to:							
1. Understand t	1. Understand the fundamentals of human physiology system and its functions.							
	ndamental concepts of physiological parameters measurement.							
3. Apply the co	ncepts of various instrumentation techniques for biomedical application	ıs.						
<b>Course Outcomes:</b>								
At the end of this cou	rse, students will be able to							
1. Identify the l	pasic functions of various human physiological systems							
2. Demonstrate	an interfacing circuit for real time bio signal acquisition							
3. Construct the	e suitable instrumentation technique for a specific illness							
<ol><li>Categorize tl</li></ol>	ne medical devices based on its biomedical applications							
5. Assess the va	arious parameters, constraints in methodology for effective diagnosis							
6. Design of ad	vanced biomedical equipments for various diseases and ensure patient s	safety	/					
Module: 1	Introduction To Human Physiology	<b>8</b> E	lour	s				
Circulatory system	- cardio vascular system-central nervous system - respiratory system -	musc	ular	skele	etal			
system - digestive system	stem – excretory system – sensory organs – voluntary and involuntary a	ctior	ı.					
Module: 2	<b>Biopotentials And Their Measurements</b>	<b>7</b> E	lour	s				
	- resting potentials - action potentials - bioelectric potentials -							
	recording - Electrode theory - bipolar and Unipolar electrode-su							
	-equivalent circuit for extra cellular electrodes- micro electrodes. bas	sic p	rinci	ples	of			
ECG, EEG, EMG.								

Module: 3	Advanced Medical Instrumentation	7 Hours
	entation system for physiological measurements-temp	
	ng encoder, flow measurements. Sensor selection	for speed, location and acceleration
measurement.Case	e study. IoT based medical instrumentation.	
Module: 4	Cardiovascular System And Instrumentation	8 Hours
	entation system for Blood pressure measurement, select	
	rements, phonocardiography, Cardiac pacemakers, h	
-	ng circuits. Design of interface system. Casestudy.A	rtificial intelligence in cardiovascular
system.		
Module: 5	Respiratory System And Instrumentation	7 Hours
	athing, regulation of respiration, design of instrumen	tation system for respiratory system,
	lucers, artificial respiration therapy, artificial mechan	
	ntilators. Design of interfacing circuits.Case study. Ma	
Module: 6	Neurological Instrumentation System	8 Hours
Neurophy	viology, design of EEG amplifiers, wireless EEG, Bis	spectral Index EEG measurements for
depth of anesthesia	a monitoring. Deep learning in neurocomputing.	-

21BM3004         ADVANCED HEALTHCARE SYSTEM DESIGN	3	0	0	3
Course Objective:	5	v	v	
The student should be made to:				
1 Understand the mode for manufall devices and the technology				

- 1. Understand the needs for wearable devices and the technology
- 2. Learn the concepts in digital health care and digital hospitals
- 3. Apply the tools in design, testing and developing digital health care equipment

# **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the available technology for wearable healthcare devices
- 2. Interpret the need for digital methods of handling medical records
- 3. Modify the tools and methods for work flow
- 4. Compare various standards for inter-operability of devices
- 5. Decide quality and safety standards for developing healthcare systems
- 6. Formulate advanced strategies for innovation to societal needs.

#### Module: 1 Wearable Devices And M-Health Care

Introduction to mobile health care-devices-economy-average length of stay in hospital, outpatient care, health care costs, mobile phones, 4G, smart devices, wearable devices, Uptake of e-health and m-health technologies. Standards, system Design and case study.

Module: 2	Digital Radiology	7 Hours			
Digital radiology for digital hospital, picture archiving and communication, system integration, digital history					
of radiology, m	of radiology, medical image archives, storage and networks.				
Module: 3	E-Health	7 Hours			
Health care networking, Medical reporting using speech recognition, physiological tests and functional					
diagnosis with	digital methods, tele-consultation in medicine and radiology. Machine learning	in diagnosis.			

**BIOMEDICAL ENGINEERING (2021)** 

Module: 4	Modality	8 Hou	ırs	
Multimodality	registration in daily clinical practice. Mobile healthcare.Casestudy.IoT	applica	ations	in
healthcare.				
Module: 5	Digital Health	7 Hou		
1	and best practices, Laws and regulations in Digital health, Ethical issues, barrie	ers and s	strateg	gies
for innovation				
Module: 6	Standards For Inter Operability	8 Hoi		
	Implementation in e-Health project, design of medical equipments based on use	r needs.	Secu	rity
and privacy in	digital health care.	T . = ==

To impart kno				
1. Basi	c concepts of Embedded Systems			

- 1. Basic concepts of Embedded Systems
- 2. Various techniques used for designing an embedded system.
- 3. 3. Real time system with an examples

#### **Course Outcomes:**

Upon the completion of this course, the student will be able to:

- 1. Discuss the basics of embedded systems and its hardware units
- 2. Identify the various tools and development process of embedded system
- 3. Create the programming for embedded system design
- 4. Demonstrate the various I/O interfacing with microcontroller
- 5. Summarize the real time models, languages and operating systems
- 6. Design a real time embedded system for biomedical applications

Module: 1System Design8 HoursDefinitions-Characteristics-Architectureof an embedded system-Overview of micro-controllersandmicroprocessors-Classifications of an embedded system - Embedded processor architecturaldefinitions-Embedded hardwareunits and devices in a system, Design Process, Design process and metrics in embeddedsystem-system, Design challenges, Optimising the design metrics, Skills required for an embedded system designer.system

# Module: 2Embedded Software Tools for Programming7 HoursEmbedded software development Process, Host and Target machine, Linking and Locating Software, Getting<br/>embedded software into the target system, Converting embedded C programming into Machine codes,<br/>Embedded Software IDE for programming, Embedded Software Tools.7 Hours

Module: 3Course in Embedded C7 HoursReview of embedded C programming Language,Programming in assembly language and high level language,<br/>C program elements, Embedded C programming- Simple programs, High level language descriptions of<br/>software for embedded system, Basics of Python programming.7 HoursModule: 4Hardware interfacing and Programming Skills8 Hours

		(Deemed to be University)
Study of microcontroller, Interfacing and Pa	rogramming – Switch, Keypad, LED, Seven seg	gment displays, Data

The stu	The student should be made to:					
1.	Work with various medical image data					
2.	Have experience in MatLab for image processing					
3.	Process medical images using various methods					
Course	Outcomes:					
Upon th	e completion of this course, the student will be able to:					
1.	Demonstrate the manipulation of images for the specified requirement					
2.	Identify the region of interest using segmentation and morphological operations					
3.	Modify the image geometry for specific purpose					
4.	Show the effect of rending on given image					
5.	Indicate the results of fusion and registration of images					
6.	Demonstrate image reconstruction using the given data					
LIST OF EXPERIMENTS						
1.	Basic operations on medical images					
2.						
3.	e e					
4.	Morphological operations on medical images					
5.	Translation and rotation of medical images					
6.	Image reformatting and tracking					

- 7. Volume rendering and Surface rendering
- 8. Methods for medical image fusion using artificial intelligence
- 9. Image registration methods using deep learning
- 10. Image reconstruction using machine learning

# **Recommended by Board of Studies**

Approved by Academic Council 25<sup>th</sup> September 2021

# Course codeLTPC21BM3009MEDICAL DEVICES DEVELOPMENT LABORATORY0042

# **Course Objective:**

The student should be made to:

- 1. understand the fundamentals of Embedded system
- 2. develop programming techniques in real time applications
- 3. design and develop biomedical devices and products in healthcare

#### **Course Outcomes:**

Upon the completion of this course, the student will be able to:

- 1. Create an embedded C program for various I/O interfacing in medical devices
- 2. Implement hardware timer concepts for providing delay
- 3. Develop real time embedded systems for biomedical applications
- 4. Apply internet protocols for data transmission
- 5. Design interfacing circuits to acquire real time data and process it using software
- 6. Integrate the sensor with internet protocol for online monitoring

# LIST OF EXPERIMENTS

- 1. Port Programming
- 2. Input and Output device Interfacing
- 3. Concept of timer for generating hardware delay
- 4. PWM generation
- 5. Biosensor Interfacing
- 6. ON/OFF Relay control
- 7. Low Power wireless transmission of Biosignals
- 8. Analysis of biosignals and image with Raspberry Pi using python
- 9. Configuring Raspberry Pi processor for cloud storage and interfacing of biosignals
- 10. Design of Online Patient monitoring system -IoT implementation
- 11. Mobile phone based design of medical devices for continuous monitoring system

12. Web server based monitoring and control

Course code MEDICAL SENSORS AND MEMS TECHNOLOGY	L	Т	Р	С					
21BM3010	3	0	0	3					
Course Objective:									
The student should be made to:									
1. Understand the in depth and quantitative view of medical sensors and its characteristics									
2. Knowledge of the current state of the art to micro sensor fabrication methods									
3. Apply the tools to design and development of sensors for the medical applications									
Course Outcomes:									
At the end of this course, students will be able to									
1. Identify the principle of medical sensors and its interfacing circuits									
2. Classify the micro sensor materials, synthesis, fabrication and its characterization									
3. Choose the design tools to test and develop products to required specifications									
4. Infer the most relevant challenges facing in the fabrication process									
5. Judge a sensor based on standard performance criteria and environmental impact									
6. Construct the micro system for appropriateness for an application and user.

Course	Course Objective:								
The stuc	dent should be made to:								
1.									
<ol> <li>Understand the fundamentals of EEG signal acquisition techniques</li> <li>Learn the feature extraction methods</li> </ol>									
3.	Design EEG based robotic application								
Course	Outcomes:								
At the e	end of this course, students will be able to								
1.	Identify the data acquisition methods for EEG signal								
2.	Classify the types of signals and its components								
3.	Choose the design tools to develop simulation models								
4.									
5.	Assess the systems based on the design specifications								
6.	Construct the applications for medical diagnosis and robots								

Module: 1 Human Computer Interaction

7 Hours

Introduction to theories within cognitive and perceptual psychology, human decision making and actions in computer supported situations. Design and construction, Interaction between human and computerized technical systems.Artificial intelligence in decision making.

technical s	stems.Artificial intelligence in decision making.	
Module: 2	Introduction To Brain Computer Interfaces	8 Hours
Concept of	BCI, Invasive and Non-invasive Types, EEG Standards, Signal Features, Spectral C	Components,
EEG Data	Acquisition, Pre-processing, Hardware and Software, Artifacts, Methods to Remove, N	lear Infrared
BCI.Machi	e learning for brain computer interface.	
Module: 3	BCI Approaches	7 Hours
Movement	Related EEG Potentials, Mental States, Visual Evoked Potential. P300 virtual platforn	1.
Module: 4	EEG Feature Extraction Methods	8 Hours
Time/Spac	Methods, Fourier Transform, Wavelets, AR models, Band pass filtering, PCA, Lapla	cian Filters,
Linear and	Non-linear Features. Deep learning and artificial intelligence in feature extraction met	hods.
Module: 5	EEG Feature Translation Methods	7 Hours
LDA, Reg	ession, Memory Based Vector Quantization, Gaussian Mixture Modeling, Hidd	len Markov
Modeling.		
Module: 6	BCI Controlled Robots	8 Hours
Case Study	of Problems in BCI, Case Study of Brain Actuated Control applications.	
	Total Lectures	45 Hours

Course code	COGNITIVE TECHNOLOGY FOR BIOMEDICAL ENGINEERS	L	Т	Р	С		
21BM3013		3	0	0	3		
Course Objectiv	ve:						
The student shou	ald be made to:						
	he various soft computing frame works						
2. Be familiar with design of various neural networks and fuzzy logic							
3. Learn g	enetic programming and hybrid systems						
<b>Course Outcom</b>	nes:						
Upon completion	n of the course, the student should be able to:						
	various soft computing frame works						
	et various neural networks and fuzzy logic methods						
	genetic programming and hybrid soft computing						
	computing techniques for biomedical applications						
	hybrid techniques						
6. Design	diagnostic and therapeutic methods						
	Introduction To Artificial Neural Networks			ours			
	learning methods – taxonomy – Evolution of neural networks- McCulloch-J						
	ebb network - supervised learning network: perceptron networks - adap	tive 1	linear	neu	ron,		
	e linear neuron. Artificial intelligence in medical applications.						
	Types Of Neural Networks			lours			
	ONN- associative memory network: auto-associative memory network,						
	k, BAM, hopfield networks, iterative autoassociative memory network & in						
	k - unsupervised learning networks: Kohonenself organizing feature	maps	, LV	Q –	CP		
networks, ART i	network. Case studies on biomedical applications.						
	Fuzzy Logic			ours			
	actions: features, fuzzification, methods of membership value assignment						
lambda cuts - m	ethods - fuzzy arithmetic and fuzzy measures: fuzzy arithmetic - extensio	n pri	ncipl	e - fu	zzy		

	ormation of rules-decomposition of rules, fuzzy inference systems-overv	iew of	fuzz	y ex	pert					
	system-fuzzy decision making. Case studies on biomedical applications.									
Module: 4	Genetic Algorithm			lours						
	Genetic algorithm and search space - general genetic algorithm, operators - Generational cycle, stopping condition, constraints. Classification, genetic programming, multilevel optimization, real life problem,									
Advances in GA. Case studies on biomedical applications using deep learning.										
Module: 5										
	hybrid systems - genetic neuro hybrid systems - genetic fuzzy hybrid and	fuzzy								
	systems - simplified fuzzy ARTMAP. Case studies on biomedical applications.									
Module: 6     Applications     8 Hours										
A fusion app	proach of multispectral images with SAR, optimization of traveling sale	sman j	oroble	em us	sing					
genetic algori	ithm approach, soft computing based hybrid fuzzy controllers. Case st	udies of	on bi	omed	ical					
applications.

Module: 3 Applications To Field Problems

7 Hours

Higher order of	ements. Natural co-ordinate systems Isoparametric elements Shape function	s for i	60 <b>D</b> 2	rame	tric
	two and three dimensions Serendipity elements Numerical integration and a				
	s transformation in coordinates- Jacobian of transformation-order of conve				
	mple problems- shape functions in natural coordinates- rectangular elements				
	nily rectangular prisms- tetrahedral elements. Deep learning tools in analysis		unge	, iuiii	in y
Module: 4	Isoparametric Formulation And Miscellaneous Topics		8 H	ours	
	elasticity equations stress strain relations plane problems of elasticity eleme.	nt			
	e stress, plane strain and axisymmetric problems stress-strain-time or constit		equa	tions	for
	tissue components Modelling and force analysis of musculoskeletal systems				
Module: 5	Non-Linear Analysis			ours	
Introduction to	Non-linear problems - some solution methods- computational procedure	e- sin	nple	mate	erial
nonlinearity, s	ress stiffening, contact interfaces- problems of gaps and contact- geome	etric 1	ion-l	inear	ity-
modeling cons	derations.				
Module: 6	Impact Analysis		8 H		
Mechanical pr	operties of biological and commonly used biomedical engineering materials	- Cri	tical	revi	ews
of finite eleme	nt analysis in biomechanical research.

Course code	MACHINE LEARNING FOR HEALTHCARE	L	Т	Р	С		
21BM3016		3	0	0	3		
	Course Objective:						
The student should be made to:							
1. Learn the concept of machine learning.							
2. Analyse recent advances in machine learning algorithms							
3. Explore supervised and unsupervised learning paradigms towards applications							
Course Outcomes:							
After completion of course, students would be able to:							
1. Describe features that can be used for a particular machine learning approach							
2. Classify contrast pros and cons of various machine learning techniques							
3. Illustrate various methods for developing the application							
4. Infer various machine learning approaches and paradigms.							
5. Choose the methods towards challenges							
6. Create solution to human problems in healthcare domain							
Module: 1	Supervised Learning			ours			
Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes Linear models:							
	Linear Regression, Logistic Regression, Generalized Linear Models Support Vector Machines, Nonlinearity						
and Kernel Methods-Beyond Binary Classification: Multi-class/Structured Outputs, Ranking							
Module: 2	Unsupervised Learning			ours			
Clustering: K-means/Kernel K-means, Dimensionality Reduction: PCA and kernel PCA, Matrix Factorization							
and Matrix Completion, Generative Models (mixture models and latent factor models)							
Module: 3	Evaluating Algorithms			ours			
Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble							
Methods, Boosting, Bagging, Random Forests.							
Module: 4	Sparse Modeling And Estimation			ours			
Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning. Medical							
applications case study.							
Module: 5	Scalable Machine Learning		7 H	ours			

		rom some other advanced topics, e.g., Semi-supervi					
and Inference	g, Reinforcement Learning, Inf	ference in Graphical Models, Introduction to Baye	sian Learning				
Module: 6	Recent Trends		8 Hours				
Various learnin		ning and classification methods for IoMT applicat	tions. Various				
	IT, and applications. Healthcare						
		Total Lectures	45 Hours

#### **Course Outcomes:**

At the end of this course, students will be able to

1. Identify the mechanical and electrical safety standards of medical equipment

2. Understand device specific safety goals

3. Interpret reasonable, acceptable and effective remedies and counter measure

4. Select the clinical suitability to the impact of the device on the environment

- 5. Device more reliable medical equipment incorporating safety goals
- 6. Combine new techniques for device management

Module: 1Reliability And Safety Testing7 HoursReliability – Types of reliability – Reliability optimization & assurance – Reliability's effect on medical<br/>devices – The concept of failure – Causes of failure – Types of Failures in Medical devices – Safety testing –<br/>Device specific safety goals, Failure assessment and Documentation – Visual inspection: External & Internal<br/>visual inspection – Measurement – Safety parameters, Function test. Data analytics in reliability analysis.8 Hours

Safe medical devices – Handling and operation – Medical Application safety – Usability – Clinical assessment – Environmental safety. Deep learning in clinical assessment.				
Module: 3	Electrical Safety		7 Hours	5
Safety Mechanics - Electrical Safety - Biological aspect - Limitation of Voltages - Macroshock and				
Microshock – Earth and Protection – Leakage currents – Magnetic fields and compatibility – Basic assumptions				
in safety tec	nnology – Safety classes.			
Module: 4	Medical Devices Standards		8 Hours	
Medical Sta	ndards and Regulations – Device c	classification - Registration and listing -CE,	UL standa	ards,
ICMED reg	lations- Investigational Device Exe	emptions – Institutional Review Boards – IDE	format – C	Jood
laboratory p	actices - Good manufacturing pract			
Module: 5	Ethical Theories & Moral Prin		7 Hours	
		theory, Virtue theory, The Right Theory. Print		
		y, Justice. Autonomy & Confidentiality issu		
practice, Eth		ioethical issues in Human Genetics & Reproduc	ctive Medio	cine.
Module: 6	Introduction To Medical Ethic		8 Hours	
		nedicine, American medical Association code of		
		The Doctor and the Patient, The Doctor and t	the Profess	sion,
Professional Independence, The Doctor and Society. Data analytics in medical ethics.				
		Total Lectures	45 Hou	rs

Methodology Specifications Integration and Application Development.	Method	ology S	pecifications Integration and Application Development.				
Module: 3 Embedded Systems 7 Hours	Module	e: 3	Embedded Systems		7 H	lours	i

Generic Embedded Systems Structure- Components of Embedded Systems- Sensors and Actuators-importance of Analog/Digital Conversion- Embedded system based physiological monitoring system- Health care innovations using embedded system. Evolution of digital health- challenges and opportunities of digital health-importance of digital health.

Module: 4Ethical Issues In Health Care8 HoursEthical implications of digital health technologies- privacy, confidentiality and security of personal health data-<br/>ethical framework and guidelines in digital health, principles of biomedical ethics.8 Hours

Module: 5IoT In Health Care Applications7 HoursIoT based health care- physiological parameter monitoring system- future challenges in health care- health careecho system with IoT-IoT for personalized health care- wearable device characteristics-analysis of poweraware protocols. Artificial intelligence in health monitoring.Artificial intelligenceIoT

Module: 6Standards For E-Health Applications8 HoursSocial networkanalysis in health care embedded health care system for senior resident using IoT.

Course code	NANOTECHNOLOGY IN MEDICINE	L	Т	Р	С
21BM3024		3	0	0	3
Course Obje	tive:				
The student sh	ould be made to:				
1. To k	now basic nanotechnological principles and characterization methods				
	nderstand the essential features of biology and nanotechnology				
3. Crea	e the new areas of bio nanotechnology and nanomedicine.				
Course Outco	omes:				
The student w	ill be able to:				
	e the newest findings in the area of nanomedicine				
	ify the materials for nano therapeutics				
	the advanced methods of nano synthesis				
	ain the characteristics of nanoparticles in diagnosis				
	se nanotechnology in appropriate medical applications				
6. Impl	ement the perspectives in own research				
Module: 1	Introduction of Nanoparticles			lours	
	anotechnology from medical perceptive, different types of nanobiomaterials			struct	ture
interactions.S	nthesis, characterization, and properties smart nanomaterials, Surface modif	icatic	n.		
Module: 2	Biofunctionalization of Nanomaterials			lours	
Nanocarriers,	Nanocarriers, liposomes, polymer capsules, polymer nanoparticles. Artificial intelligence in nanomaterials.				
Module: 3	Protein As Nanostructures			lours	
	l nanostructures building blocks and templates Proteins as transduce				
nanobioelectronic devices and polymer nanocontainers microbial production of inorganic nanoparticles					
magnetosome	3				
Module: 4	DNA as nanostructures		-	ours	
DNA based nanostructures Topographic and Electrostatic properties of DNA Hybrid conjugates of gold					
nanoparticles	DNA oligomers use of DNA molecules in nanomechanics.				
Module: 5	Nanoparticles In Diagnosis		7 H	ours	

Introduction to nanoparticles in diagnostics nuclear imaging, optical imaging, PET, Micro PET, cardio vascular disease studies, imaging and therapy of thrombosis, emerging Ethical issues and toxicology of nanomaterials.Deep learning in disease diagnosis.

Module: 6Nanotherapeutics8 HoursNanoparticles as carriers in drug delivery- design, manufacture and physiochemical properties, transport across<br/>biological barriers, nanotechnology in Cancer therapy, lung infectious disease, bone treatment, nano particles<br/>for oral vaccination and skin disease.8 Hours

 BIOMEDICAL ENGINEERING ENTREPRENEURSHIP

Course code	BIOMEDICAL ENGINEERING ENTREPRENEURSHIP	Т	Р	С
21BM3025	21BM3025 3			3
<b>Course Objec</b>				
The student sh	buld be made to:			
	rn fundamentals of entrepreneurship			
	ply the methods of entrepreneurship in medical field			
	aluate the medical devices and market trends			
<b>Course Outco</b>				
At the end of the	his course, students will be able to			
	ibe the role of biomedical engineers in entrepreneurship			
	ret the background for biomedical engineers in entrepreneurship			
	re the skills and techniques required towards innovation			
	orize the resources and funding agencies			
5. Judge	the right product based on market needs			
6. Comp	ile and quantify the opportunities and challenges			
Module: 1	Scope For Biomedical Engineering Entrepreneurship	7 H	ours	
	and models, Advancements in biomedical field, Supporting societies and			
activities.Impa	ct of innovation in medical devices. Casestudy. Artificial intelligence in innovati	on of	med	ical
devices.				
Module: 2	Venture		ours	
Assessing the	venture, Establish venture invention, market research, presenting the business pla	n, ca	se stu	ıdy.
Data analytics	in market research.			
Module: 3	Regulations	7 H	ours	
Certification,	ISI, CE, UL, NABL and FDA regulations, ISO:13485, ISO:14791, risk	mana	agem	ent,
Environmental	regulation. Case study on risk management.Case study.			
Module: 4	Identifying The Grants		ours	
Identify and or	ganize support for product development, funding agencies, collaborative initiati	ves, a	nd ar	igel
investors.				
Module: 5	Impact of Globalization	7 H	ours	
Medical produ	ct manufacturing, marketing, leadership, quality management. Machine learning	techi	nique	s in
product design	· · · · · · · · · ·		-	
Module: 6	Environmental Awareness	8 H	ours	
Environmental	regulations, safety, safe disposal, preventing pollution, preventing health hazard	5.		
	Total Lectures	45	Hour	s
Text Books

Course code	ARTIFICIAL INTELLIGENCE IN HEALTHCARE	L	Т	Р	С	
21BM3028		3	0	0		
Course Objec	tive:					
Enable the stud	lent to					
1. underst	and the various fundamental characteristics of Artificial Intelligence					
2. learn to	2. learn to represent knowledge in solving healthcare problems					
3. analyze	designing of software agents and its application.					
5. unury20	designing of software agents and its appreation.					

Course Outcomes:					
The student will be able to					
1. understand the basics of Artificial Intelligence.					
2. summarize the appropriate search algorithms for medical problem,					
3. represent a problem using behavioral logics.					
4. apply AI problem solving techniques					
5. develop simple intelligent system for medical diagnosis					
6. Application development for healthcare problems in society					
Module: 1 Exploration of Artificial Intelligence:		7 H	ours		
Overview of Artificial intelligence - Definition - Future of Artificial Intelligence - Behavio	ral C	hara	cteris	tics	
of Intelligent Agents - Typical Intelligent Agents - Problem Solving Approach to healthcare	prot	olems			
Module: 2 Problem Solving Methods			ours		
Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local S	Searc	h Alg	gorith	nms	
and Optimization Problems - Searching with Partial Observations - Constraint Satisfa	actior	n Pro	blem	is -	
Constraint Propagation - Backtracking Search. Case studies.					
Module: 3 AI Decision Tree			ours		
Learning methods, Rule-based systems- Decision tree learning- Reinforcement learning	g. A	I in	Med	ical	
diagnosis.					
Module: 4 Knowledge Representation			ours		
First Order Predicate Logic - Prolog Programming - Unification - Forward Chaining-Bac					
Resolution - Knowledge Representation - Ontological Engineering-Categories and Objects					
Events and Mental Objects - Reasoning Systems for Categories - Reasoning with Default	Infor	mati	on. C	ase	
studies.					
Module: 5 Software Agents			ours		
Architecture for Intelligent Agents - Agent communication - Negotiation and Bargaining	g - A	rgun	entat	ion	
among Agents - Trust and Reputation in Multi-agent systems. Biomedical applications.		7 11			
Module: 6Medical Applications of AIBlood pressure control, Speech Recognition – Robot control for surgical applications - Hard	luvor		ours	ion

Course code ADVANCED RISC MACHINE IN BIOMEDICAL APPLICATIONS	L	Т	Р	С	
21BM3029	3	0	0		
Course Objective:					

Enable the student to

- 1. To study ARM architectural support for system development and operating system
- 2. To understand different ARM architecture and Embedded ARM applications
- 3. Gain the knowledge about ARM processor in Biomedical applications.

**Course Outcomes:** 

At the end of the course, the student will demonstrate the ability to:

1. Understand basics of ARM processor

2. Design System for interfacing
3. Learn the basic of operating system
4. Apply the concepts for biomedical applications
5. Develop advanced applications in artificial intelligence
6. Implement medical device regulation and safety standards
odule: 1         ARM Architecture         7 Hours           DM Architecture         APM Design Dhilosophy, Desigtors, Drogram Status Register, Instruction Dinaling         Dinaling
RM Architecture ARM Design Philosophy, Registers, Program Status Register, Instruction Pipeline, terrupts and Vector Table, Architecture Revision, ARM Processor Families.
odule: 2 ARM Instruction Set 8 Hours
ata Processing Instructions, Addressing Modes, Branch, Load, Store Instructions, PSR Instructions
onditional Instructions. Thumb Instruction Set: Register Usage, Other Branch Instructions, Data Processin
structions, Single Register and Multi Register Load -Store Instructions, Stack, Software Interrupt Instruction
odule: 3Architectural Support For System Development And Operating Systems7 Hours
chitectural Support for System Development and Operating Systems: Hardware system prototyping tools
he ARMulator, The JTAG boundary scan test architecture, The ARM debug architecture, Embedded Trace
gnal processing support, An introduction to operating systems, The ARM system control coprocessor, CP1
otection unit registers, ARM protection unit, CP15 MMU registers, ARM MMU architecture
nchronization, Context switching.
odule: 4     Embedded ARM Applications     8 Hours
nbedded ARM Applications: The VLSI Ruby II Advanced Communication Processor, The VLSI ISDN
bscriber Processor, The OneC <sup>TM</sup> VWS22100 GSM chip, The Ericsson-VLSI Bluetooth Baseband Controlle
ne ARM7500 and ARM7500FE, The ARM7100, The SA1100.7 Hoursodule: 5ARM Processor For Biomedical Applications7 Hours
RM Processor for Biomedical Applications-Introduction, Lowcost medical devices, Medical System-on-Chi
oplications. Case Study.
odule: 6         ARM Processor For Telemedicine Applications         7 Hours
eart rate monitoring. Biomedical Data Acquisition. Telemedicine. Case study.

# LIST OF NEW COURSES (2020)

19BM2031		L	Т	Р	С
19DN12031	MEDICAL INTERNET OF THINGS	3	0	0	3

# **Course Objectives:**

- 1. Impart necessary and practical knowledge of components of Internet of Things
- 2. Gain Knowledge on IoT protocols
- 3. Deal with case studies related to healthcare applications of IoT.

# **Course Outcomes:**

At the end of the course, The Student will be able to

- 1. Understand internet of Things and its hardware and software components
- 2. Interface I/O devices, sensors & communication modules
- 3. Remotely monitor data and control devices
- 4. Develop understanding of data analytics and supporting devices
- 5. Discuss about Case studies on IoT applications in health care
- 6. Develop real life IoT based medical applications

# Module 1: Introduction to IoT : (8 hrs)

Architectural Overview, Design principles and needed capabilities, IoT Applications, Sensing, Actuation, Basics of Networking, M2M and IoT Technology Fundamentals- Devices and gateways, Data management, Business processes in IoT, Everything as a Service(XaaS), Role of Cloud in IoT, Security aspects in IoT, Wireless Body Area Networking.

# Module 2: Elements of IoT : (7 hrs)

Hardware Components- Computing (Arduino, Raspberry Pi), Communication, Sensing, Actuation, I/O interfaces. Software Components- Programming API's (using Python/Node.js/Arduino) for Communication Protocols-MQTT, ZigBee, Bluetooth, CoAP, UDP, TCP.

#### Moduel 3: IoT Application Development : (7 hrs)

Solution framework for IoT applications- Implementation of Device integration, Data acquisition and integration, Device data storage- Unstructured data storage on cloud/local server, Authentication, authorization of devices.

#### Module 4: Data Analytics And Supporting Services: (8 hrs)

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – No SQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework – Django – AWS for IoT – System Management with NETCONF-YANG

# Module 5: Building IoT with RASPBERRY PI & ARDUINO: (8 hrs)

Building IOT with RASPERRY PI- IoT Systems - Logical Design using Python – IoT Physical Devices & Endpoints - IoT Device -Building blocks -Raspberry Pi -Board - Linux on Raspberry Pi - Raspberry Pi Interfaces -Programming Raspberry Pi with Python - Other IoT Platforms - Arduino.

# Module 6: Case Study/Health Care: (7 hrs)

IOT in Emergency and Healthcare services,, Components of IoT healthcare, Remote health care, Real time monitoring, Preventive care, Preventive Cardiological Monitoring, Health care systems- Activity Monitoring

#### **Text Books:**

- 1. A Handbook of Internet of Things in Biomedical and Cyber Physical System, **Bălaş**, V.E., **Solanki**, V.K., **Kumar**, R., **Ahad**, ISBN 978-3-030-23983-1, 2019
- 2. Medical Internet of Things, Hamed Farhadi, Intech Open, 2019.
- 3. "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", by Pethuru Raj and Anupama C. Raman (CRC Press)
- 4. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press)

# 5. Raspberry Pi Iot in C, Harry Fairhead, 1st edition, 2016, I/O Press;, ISBN-13: 978-1871962468.

# **Reference Books:**

- 1. "Internet of Things: A Hands-on Approach", by Arshdeep Bahga and Vijay Madisetti (Universities Press)
- 2. Bălaş, V.E., Solanki, V.K., Kumar, R., Ahad, "A Handbook of Internet of Things in Biomedical and Cyber Physical System", ISBN 978-3-030-23983-1, 2019

19BM2032 CLOUD COMPUTING APPLICATION	CLOUD COMPUTING APPLICATIONS IN	L	Т	Р	С
19D1012032	<b>BIOMEDICAL ENGINEERING</b>	3	0	0	3

#### **Course Objectives:**

- 1. Learn the fundamentals of cloud computing
- 2. Provide knowledge about virtualization and could services
- 3. Gain understanding about the cloud computing applications in biomedical engineering.

#### **Course Outcomes:**

#### At the end of the course, The Student will be able to

- 1. Recall the concepts of cloud computing
- 2. Compare different models of cloud computing
- 3. Explain virtualization and classify services of cloud computing

- 4. Illustrate architecture and programming in cloud
- 5. Describe the platforms for development of cloud applications and List the application of cloud. 6.
- о. Г
- 7. Apply the technology for healthcare applications

# Module 1:Introduction: (7 hrs)

Cloud Computing at a Glance, The Vision of Cloud Computing, Defining a Cloud, Cloud Computing Reference Model, Characteristics and Benefits, Challenges, Historical Developments

# Module 2: Distributed Systems and Virtualization: (8 hrs)

Web 2.0, Service-Oriented Computing, Utility-Oriented Computing, Building Cloud Computing Environments, Application Development, Infrastructure and System Development, Computing Platforms and Technologies, Amazon Web Services (AWS), Google AppEngine, Microsoft Azure, Hadoop, Force.com and Salesforce.com, Manjrasoft AnekaVirtualization in Cloud Computing: Virtualization, Introduction, Characteristics of Virtualized Environments, Virtualization and Cloud Computing, Pros and Cons of Virtualization, Technology Examples Xen: Paravirtualization, VMware: Full Virtualization, Microsoft Hyper-V

# Module 3: Cloud Computing Architecture: (7 hrs)

Introduction, Cloud Reference Model, Architecture, Infrastructure / Hardware as a Service, Platform as a Service, Software as a Service, Types of Clouds, Public Clouds, Private Clouds, Hybrid Clouds, Community Clouds, Economics of the Cloud, Open Challenges, Cloud Definition, Cloud Interoperability and Standards Scalability and Fault Tolerance Security, Trust, and Privacy Organizational Aspects

# Module 4: Concurrent Computing: (8 hrs)

Thread Programming, Programming Applications with Threads, Thread APIs, Techniques for Parallel Computation with Threads, Multithreading with Aneka, Introducing the Thread Programming Model, Aneka Thread vs. Common Threads, Domain Decomposition: Matrix Multiplication, Functional Decomposition: Sine, Cosine, and Tangent. High-Throughput Computing: Task Programming, Task Computing, Characterizing a Task, Computing Categories, Frameworks for Task Computing, Task-based Application Models, Parameter Sweep Applications, MPI Applications, Workflow Applications with Task Dependencies

# Module 5: Data Intensive Computing: (8 hrs)

Map-Reduce Programming, Introduction to Data Intensive Computing - Characterizing Data-Intensive Computations, Challenges Ahead, Historical Perspective, Technologies for Data-Intensive Computing, Storage Systems, Programming Platforms, Aneka MapReduce Programming, Introducing the MapReduce Programming Model, Example Application,

# Module 6: Healthcare Applications Case Studies: (7 hrs)

An Adaptive Cloud Prototype Model for Health Care system using Software Defined Network (SDN), Big Data Analytics for Childhood Pneumonia monitoring, Diabetes, Patient monitoring by Cloud Computing, Trust-Privacy Issues in Cloud Based Healthcare Services.

1001/2022	PYTHON PROGRAMMING FOR BIOMEDICAL	L	Т	Р	С	
19BM2033	APPLICATIONS	2	0	2	3	

# **Course Objectives:**

- 1. Understand the most important libraries of Python, and its recommended programming styles and idioms.
- 2. Learn core Python scripting elements such as variables and flow control structures.
- 3. Develop applications using Python for robotics.

#### **Course Outcomes:**

At the end of the course, The Student will be able to

- 1. Outline the structure and components of a Python program.
- 2. Explain loops and decision statements in Python.
- 3. Illustrate class inheritance in Python for reusability
- 4. Choose lists, tuples, and dictionaries in Python programs.
- 5. Assess object-oriented programs with Python classes.
- 6. Develop simple code for biomedical applications.

# Module 1 - Introduction to Python, Data Types, Expressions: (8 hrs)

Introduction to Python Programming - Running Code in the Interactive Shell, Input, Processing and Output, Editing, Saving and Running a Script - Data Types, String Literals, Escape Sequences, String Concatenation, Variables and the Assignment Statement - Numeric Data Types Module, The Main Module, Program Format and Structure and Running a Script from a Terminal Command Prompt

# Module 2: Loops and Expressions: (7 hrs)

Iteration - for loop - Selection - Boolean Type, Comparisons, and Boolean Expressions, if-else Statements, One-Way Selection Statements, Multi-way if Statements, Logical Operators and Compound Boolean Expressions, Short-Circuit Evaluation and Testing Selection Statements - Conditional Iteration - while loop.

# Module 3: Strings and Text Files: (6 hrs)

Strings - Accessing Characters and Substrings in Strings, Data Encryption, Strings and Number Systems and String Methods - Text Files - Text Files and Their Format, Writing Text to a File, Writing Numbers to a File, Reading Text from a File, Reading Numbers from a File and Accessing and Manipulating Files and Directories on Disk.

#### Module 4: Lists and Dictionaries: (8 hrs)

Lists - List Literals and Basic Operators, Replacing an Element in a List, List Methods for Inserting and Removing Elements, Searching and Sorting a List, Mutator Methods and the Value None, Aliasing and Side Effects, Equality and Tuples - Defining Simple Functions - Syntax, Parameters and Arguments, return Statement, Boolean Functions and main function, DICTIONARIES - Dictionary Literals, Adding Keys and Replacing Values, Accessing Values, Removing Keys and Traversing a Dictionary.

#### Module 5: Design with Functions and Design with Classes: (8 hrs)

Design with Functions and Design with Classes - Functions as Abstraction Mechanisms, Problem Solving with Top-Down Design, Design with Recursive Functions and Managing a Program's Namespace -DESIGN WITH CLASSES - Objects and Classes, Data Modeling and Structuring Classes with Inheritance and Polymorphism.

# Module 6: Case Studies in Biomedical Engineering : (8 hrs)

Medical Imaging, Speech Recognition, Genomics, Drug Discovery, Patient Health Monitoring, Virtual Assistance, Predictive Analytics in Healthcare.

#### **Experiments:**

The list of experiments will be notified by the HoD at the beginning of each semester.

#### **Text Books:**

19BM2034	DATA ANALYTICS FOR BIOMEDICAL	L	Т	Р	С
	ENGINEERING	3	0	0	3

#### **Course Objectives:**

To improve knowledge on

- 1. Fundamental concepts and methods of Big data analysis.
- 2. Data exploration, visualization and statistical analysis for given data set.
- 3. Performing big data analytics for Biological data set.

#### **Course Outcomes:**

At the end of the course, the students will be able to

- 1. Demonstrate fundamental knowledge of Big data analytics.
- 2. Explore different types of data from different sources.
- 3. Write R script to analyse data from data interface.
- 4. Develop and generate different types of charts and graphs.
- 5. Perform various statistical analysis using R packages for given data set.
- 6. Apply knowledge of big data analytics on bioinformatics and health care data set.

#### Module 1: Introduction: (8 hrs)

Big data analytics overview, Data life cycle, Traditional Data mining Life cycle, CRISP, Big Data life cycle methodologies, Machine learning implementation, Recommender system , Dashboard, Ad-Hoc analysis.

# Module 2: Data Exploration and Visualization: (8 hrs)

Problem Definition, Data Collection, Data Pre-processing, Data Cleaning – Homogenization, Heterogenization, Summarizing data, Data Exploration and Visualization.

#### Module 3: Big Data Methods: (6 hrs)

Introduction to R programming, Data Frames, Atomic vectors, Factors, Data types, Variables, Functions, working with excel files, Data interface.

#### Module 4: Charts & Graphs: (8 hrs)

Develop pie chart, 3D pie chart, Histograms, Bar chart, Group bar chart, Stacked Bar chart, Line graph, Multiline graph and Box plot.

#### Module 5: Statistical Methods: (7 hrs)

Regression models, Linear Regression, Multiple regression, Logistic regression, Mean, Median, Mode, Chi-Square test, T-Test.

# Module 6: Big data analytics for Health care: (8 hrs)

Big data analytics in diagnostics, Health care, preventive medicine, precision medicine, population health, Text mining on complex biomedical literature, medical imaging.

#### **Text Books::**

- 1. Venkat Ankam, "Big Data analytics", Packt publishing 2016
- 2. Parag Kulkarni, Sarang Joshi, "Big Data analytics", PHI learning2016

# **Reference Books::**

1. Wang, Baoying, Big Data Analytics in Bioinformatics and Health

# **BLOCK CHAIN TECHNOLOGY**

L	Т	Р	С	
3	0	0	3	

# **Course Objectives:**

- 1. Gain a conceptual understanding of block chain
- 2. Provide an overview of the applications of Block Chain Technology
- 3. Deal with the operations of Block Chain Technology

# **Course Outcomes:**

The Student will be able to

- 1. Understand the fundamentals of Block Chain Technology.
- 2. Describe the concept of Crypto Currency
- 3. Develop Block Chain based solutions and write smart contract.
- 4. Build and deploy Block Chain application for on premise and cloud based architecture.
- 5. Integrate ideas from various domains and implement them using block chain technology in different perspectives.
- 6. Develop Block chain applications pertaining to biomedical engineering.

# Module 1: Introduction : (8 hrs)

Overview of Block chain, Public Ledgers, Bitcoin, Smart Contracts, Block in a Block chain, Transactions, Distributed Consensus, Public vs Private Block chain, Understanding Crypto currency to Block chain, Permissioned Model of Block chain, Overview of Security aspects of Block chain .

# Module 2: Understanding Block chain with Crypto currency : (8 hrs)

Basic Crypto Primitives: Cryptographic Hash Function, Properties of a hash function, Hash pointer and Merkle tree, Digital Signature, Public Key Cryptography, A basic cryptocurrency. Bitcoin and Block chain: Creation of coins, Payments and double spending, Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay.

# Module 3: Working with Consensus in Bitcoin: (6 hrs)

Distributed consensus in open environments, Consensus in a Bitcoin network, Proof of Work (PoW) – basic introduction, Hashcash PoW, Bitcoin PoW, Attacks on PoW and the monopoly problem, Proof of Stake, Proof of Burn and Proof of Elapsed Time, life of a Bitcoin Miner, Mining Difficulty, Mining Pool.

# Module 4: Understanding Block chain for Enterprises : (8 hrs)

Permissioned Block chain: Permissioned model and use cases, Design issues for Permissioned block chains, Execute contracts, State machine replication, Overview of Consensus models for permissioned block chain- Distributed consensus in closed environment, Paxos, RAFT Consensus, Byzantine general problem, Byzantine fault tolerant system, Lamport-Shostak-Pease BFT Algorithm, BFT over Asynchronous systems.

# Module 5: Enterprise application of Block chain: (7 hrs)

Cross border payments, Know Your Customer (KYC), Food Security, Mortgage over Block chain, Block chain enabled Trade, We Trade – Trade Finance Network, Supply Chain Financing, Identity on Block chain **Module 6: Block chain application development: ( 8 hrs)** 

Hyperledger Fabric- Architecture, Identities and Policies, Membership and Access Control, Channels, Transaction Validation, Writing smart contract using Hyperledger Fabric, Writing smart contract using Ethereum, Overview of Ripple and Corda.

# Text Books::

- 1. Melanie Swan, "Block Chain: Blueprint for a New Economy", O'Reilly, 2015
- 2. Josh Thompsons, "Block Chain: The Block Chain for Beginners- Guide to Block chain Technology and Leveraging Block Chain Programming",2015

# **Reference Books::**

19BM2036	AUGUMENTED/ VIRTUAL REALITY APPLICATIONS	L	Т	Р	С	
19D1012030	IN BIOMEDICAL ENGINEERING	3	0	0	3	

# **Course Objectives:**

- 1. Learn the concepts and principles of virtual and augmented reality
- 2. Understand VR and AR environment and software
- 3. Gain knowledge about the applications for Biomedical Engineering.

# **Course Outcomes:**

At the end of the course, the students will be able to:

- 1. Recall basic concepts of virtual and augmented reality
- 2. Describe the geometric modelling and Virtual environment.
- 3. Work with Virtual Environment and Augmented Reality systems
- 4. Perform experiments with the Hardware and Software tools
- 5. Develop Virtual Reality applications.
- 6. Summarize the applications of Block Chain Technology for Biomedical Applications

# Module 1: Introduction to Augmented Reality and Virtual Reality : (8 hrs)

Virtual Reality and Virtual Environment: Introduction, Computer graphics, Real time computer graphics, Flight Simulation, Virtual environment requirement, benefits of virtual reality, Historical development of VR, Scientific Landmark. Augmented Reality Concepts: History of Augmented Reality, Multimodal displays: Haptic, Tactile and Tangible Displays, Visual Perception

# Module 2: Geometric Modelling: (6 hrs)

Geometric Modelling: Introduction, From 2D to 3D, 3D space curves, 3D boundary representation. Geometrical Transformations: Introduction, Frames of reference, Modelling transformations, Instances, Picking, Flying, Scaling the VE, Collision detection

# Module 3: Virtual Environment and Augmented Reality Systems: (8 hrs)

Animating the Virtual Environment: Introduction, The dynamics of numbers, Linear and Nonlinear interpolation, the animation of objects, linear and non-linear translation, shape & object inbetweening, free from deformation, particle system. Augmented Reality Systems – Types, Taxonomy of Augmented Reality, Helmet, Headup display, Smart Glasses, Projection

# Module 4: VR Hardware and Software: (8 hrs)

Human Factors: Introduction, the eye, the ear, the somatic senses. VR Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems. VR Software: Introduction, Modelling virtual world, Physical simulation, VR toolkits, Introduction to VRML, Khronos Group – AR Toolkit – Augmented Reality Operating System – Role of Augmented Reality interfaces – Players and Platforms

# Module 5: AV/VR Applications: (8 hrs)

Introduction, Engineering, Entertainment, Science, Training. The Future: Virtual environment, modes of interaction. Physical Simulation: Introduction, Objects falling in a gravitational field, Rotating wheels, Elastic collisions, projectiles, simple pendulum, springs, Flight dynamics of an aircraft.

# Module 6: AR/VR for Biomedical Applications: (7 hrs)

# Augmenting Dental Care – Virtual Reality for Rehabilitation – Medical Model Generation.

# **Text Books**

- 1. John Vince, "Virtual Reality Systems", Pearson Education Asia, 2007.
- 2. Dieter Schmalstieg, Tobias Hollerer, "Augmented Reality: Principles and Practice", Addison-Wesley Professional, 2016.

# **Reference Books:**

19BM2037	DEEP LEARNING FOR BIOMEDICAL	L	Т	Р	С
	APPLICATIONS	3	0	0	3

# **Course Objectives:**

- 1. Learn the basics of deep learning.
- 2. Gain knowledge on the concepts of deep reinforcement learning
- 3. Provide an overview on the trends in deep learning

# **Course Outcomes:s**

- 1. Recall the fundamentals of deep learning.
- 2. Compare the various models of deep learning.
- 3. Describe the concepts of deep unsupervised learning.
- 4. Discuss about the application of deep learning in computer vision.
- 5. Analyse the latest trends in deep learning.

#### Module 1: Introduction: (8 hrs)

History and Rise of Deep Learning, Impact of Deep Learning, Motivation of Deep Architecture, Challenges and Applications, Deep learning Hardware and software frameworks

# Module 2: Deep Learning Models: (7 hrs)

Convolutional Neural Networks, Restricted Boltzmann Machines, Recurrent Neural Networks, Practical Examples

#### Module 3: Deep Unsupervised Learning: (7 hrs)

Autoencoders (standard, sparse, denoising, contractive, etc), Variational Autoencoders, Adversarial Generative Networks, Autoencoder and DBM Attention and memory models, Dynamic memory networks. **Module 4: Deep Reinforcement Learning: (8 hrs)** 

Value learning based algorithms, Policy search based algorithms, Actor critic based algorithm, Deep Q Network, Implementing Deep Reinforcement Learning.

# Module5: Deep Learning in Computer Vision: (7 hrs)

Origin of CNN, Data Transformations, Network Layers and regularization, Popular CNN Architecture: Alexnet, Googlenet, Visual Geometry, Resnet.

#### Module 6: Trends in Deep Learning: (8 hrs)

Recent Models of Deep Learning, Genomics, Predictive Medicine, Clinical Imaging, Lip Reading, Visual Reasoning.

# Text Books::

Course code	MEDICAL PHYSICS	L	Т	P	С
20BM2001		3	0	0	3
Course Objectiv	ve:				
	prehend the fundamental principles of light and sound.				
	art knowledge on Radiation and radioactive nuclides.				
	sfer knowledge in applications of light, sound and radiation in medicing	ne.			
<b>Course Outcom</b>					
	s course, students will demonstrate the ability to				
	e the fundamentals of light.				
	the significance of sound in medicine.				
	chend radioactive nuclides.				
1	the interaction of radiation with matter.				
	chend basic quantities of radiation.				
-	tand the applications of light, sound and radiation in medicine.				
Module: 1	Non Ionizing Radiation		8 H	ours	
	ectromagnetic Radiation: Overview of non-ionizing radiation effects	s-Fle			
	Frequency Effects- Higher frequency effects. Physics of light, Measure f vision and color vision an overview, Thermography– Fundamentals				
Module: 2	Sound in Medicine		7 H	ours	
Physics of sound	l, Normal sound levels –ultrasound fundamentals – Generation of ultr	asour	nd		
(Ultrasound Tran	nsducer) - Interaction of Ultrasound with matter; Cavitations, Reflection	on, T	ransı	nissi	on-
Scanning system	us – Artifacts- Ultrasound-Doppler shift				
Module: 3	Principles of Radioactive nuclides		7 H	ours	
Radioactive Dec	ay – Spontaneous Emission – Isometric Transition – Gamma ray emi	ssion	, alpl	ha, b	eta,
	electron capture, Sources of Radioisotopes Natural and Artificial rad				
	on of radionuclides – Cyclotron produced Radionuclide- Reactor				
	nd electron Capture reaction, radionuclide Generator-Technetium gen				
Module: 4	Interaction of Radiation with Matter			ours	
range,Bremsstral effect, Compton	charged particles with matter –Specific ionization, Linear hlung, Annihilation, Interaction of X and Gamma radiation with mat Scattering, Pair production, Attenuation of Gamma Radiation, Inter their clinical significance.	tter- l	Photo	belec	tric
Module: 5	Basic radiation quantities		8 H	ours	
Introduction -ex relationship betw	posure- Inverse square law-KERMA-Kerma and absorbed dose – veen the dosimetric quantities - Bremsstrahlung radiation, Bragg's cur and Non-stochastic effects, Different radiation Unit, Roentgen, gray, Si	ve-co	ing once	powe	er -
Module: 6	Clinical Applications			ours	
Thermography A	Applications - Clinical Applications of Doppler – Applications of Ga onuclide used in Medicine and Technology.	ımma

Course code	BIOCHEMISTRY FOR BIOMEDICAL ENGINEERS	L	Т	Р	С
20BM2002		3	0	0	3
Course Objecti	ve:				
1. To ensu biomole	re students will have strong foundation in structure, properties and functions.	inctio	on of	vari	ous
2. To intro pathway	oduce them to the basic structure of biomolecules which are invol	ved	in m	etabo	olic
<ol> <li>To understand the industrial-market value and significance of these biomolecules and to apply these in the fundamentals of biotechnology</li> </ol>					
Course Outcon					
1. Acquire	knowledge on structure, properties and biological functions of carbohy which help them to understand the significance of biomolecules in				
<ol> <li>Acquire knowledge on nucleic acids structure, properties and functions of nucleic acids</li> <li>Assess the significance of Vitamins and mineral functions</li> </ol>					
4. Help the	em to analyze industrial-market value of these biomolecules and relation of the second s	ate th	nem y	with	the
5. Justify t	he clinical and biological significance of these biomolecules	· c.			
	and the complexes of different biomolecules and their biomedical sign	iifica			
Module: 1	CARBOHYDRATES tructure, properties and functions of carbohydrates: Monosaccharide			ours	
carbohydrates,	s-examples; Polysaccharide – classes- homo and hetero polysaccha glycolysis, gluconeogenesis ,TCA cycle, Pentose Phosphate Pathw ge Disease, Respiratory chain and ATP synthesis				
Module: 2	FATTY ACIDS AND LIPIDS		9 H	ours	
structure, proper sphingolipid, et	c structure, types, properties, functions and essential fatty acids; keton rties and functions of lipids: Simple lipid-fat and wax, Compound li her lipid and glycolipid, Derived lipid – cholesterol biosynthesis, fatty , Inborn errors of lipid metabolism.	pid-P	hosp	oholij	oid,
Module: 3	AMINO ACIDS, PEPTIDES AND PROTEINS		9 H	ours	
Amino acids- classification, properties; Essential amino acids; Peptide bond, significant natural and artificial peptides –examples; Proteins- structure / conformation levels-primary, secondary, tertiary and quaternary, Ramachandran plot, classification, Biosynthesis of aromatic amino acids-tyr,trp,phe, biodegradation of proteins and urea cycle, Review on amino acid metabolic disorders.					
Module: 4	NUCLEOTIDES AND NUCLEIC ACIDS		9 H	ours	
Nucleotides- composition, structure, properties and functions; Nucleic acids- types (RNA, DNA), DNA structure-Chargaff's rule on DNA base composition, unusual forms of DNA, RNA types, structure and functions, biosynthesis of purines and pyrimidines and its degradation, Inborn errors of nucleic acid					
metabolism - Re Module: 5	VITAMINS		4 H	ours	
Vitamins: class	ification (A, D, E, K, and B-complex members), basic structu	re, s			
A	actions and deficiency symptoms.				
Module: 6	MINERALS – FUNCTIONS AND DISORDERS		5 H	ours	

Minerals: classification- macro elements and microelements, specific function and deficiency disorders, review on vitamins and mineral supplementations

Course code	MEDICAL CODING	L	Т	Р	С
20BM2003		3	0	0	3
<b>Course Objectiv</b>	ve:				
1. To study	the fundamentals of medical coding				
2. To study	the concepts of types of medical coding				
3. To study	about various health care facilities and health care organization				
<b>Course Outcom</b>	les:				
On the successful	al completion of the course, students will be able to:				
CO1 Understa	and the various medical terminologies and basics of medical coding b	ocioc			
	the ICD and its different forms	asics	•		
	trate CPT and it various categories and their necessities				
	the concept of HCPCS codes, its types and modifiers				
•	t the requirement of crosswalking in medical coding				
	ize the various health care facilities and health organizations				
Module: 1	Medical terminology		9 H	ours	
	lical words, Medical Instruments & Equipment, Medical Specialti	es &			
	icine, Abbreviations, Anatomy and Physiology, Pharmacology, Drug				
0	nd cross-reference, plus 200 of the most commonly prescribed drugs		0	0	
Basics-Introduct	ion-Need, Types of Medical Coding, Medical Coding Tools & Resou	rces.			U
Module: 2	ICD		9 H	ours	
Introduction, IC	D-9, ICD-10, ICD-11, Overview of ICD-9-CM Layout, Steps to Loc	k Up	o a D	iagno	osis
Code, ICD-9-CN	A Official Guidelines for Coding and Reporting, medical necessity, N	CHS		-	
Module: 3	СРТ		9 H	ours	
	CPT, CPT Category I, II & III Codes, CMS, sections of CPT, Signific				
codes, CPT Mod	lifiers, CPT Evaluation and Management, Symbols and significanc	e, Al	phan	umer	ic
codes overview	of categories II and III.				
Module: 4	HCPCS codes			ours	
	gnificance and Usage, HCPCS Level I and HCPCS Level II codes,				
	II HCPCS, Dental codes, Miscellaneous codes, Temporary national	l coo	les, 🛛	Гурея	s of
temporary HCPC	CS Level II Codes				

Module: 5	Crosswalking		4 Hours
Introduction, Re	equirement, Mapping,	GEMS, CPT code-Musculoskeletal coding,	Digestive System
Coding, Urology	and Reproductive syst	em coding, Pulmonology and Cardiovascular	coding.
Module: 6	Health Insurance Sp	ecialist	4 Hours
Description, Me	edical Care Reimburser	ment, Health Organizations (MCO), Insurar	nce Claims, Payer
		Medicaid, TriCare, Worker's Compensation.

Cours	se code BIOLOGY FOR ENGINEERS L T P C					
20BN	A2006		3	0	0	3
Course	e Objecti	ve:				
1.	To com	prehend the fundamental principles of Life and Life forms				
2.	2. To impart knowledge on biodiversity and genetic theory.					
3.	3. To transfer knowledge in applications of biology in Industries.					
Course	e Outcon	ies:				
The Stu	udent will	l be able to				
1.	Illustrate constitu	e the fundamentals of living things, their classification, cell structure a ents	and b	ioche	emica	al
2.	Assess t	the significance of biodiversity in world.				
3.		hend genetics and the immune system				
4.		cause, symptoms, diagnosis and treatment of common diseases.				
5.	Compre	hend nervous system and mechanochemistry.				

Comprehend nervous system and mechanochemistry.
 Understand and apply future trends in biology.

Course code         HOSPITAL AND EQUIPMENT MANAGEMENT         L         T         P		Р	С		
20BM2007 3 0 0				3	
Course Objective:					
The student should be made to:					
1. Understand the fundamentals of health care delivery services					
2. Learn the procedures in maintenance of equipments					
3. Apply th	ne design principles in engineering systems				

Course Outcomes:							
At the end of this course, students will be able to							
1. Identify the principle of organizational structures and regulatory services							
2. Classify the types of codes followed and applications							
3. Modify the design to develop support systems							
4. Infer the most challenges in environment and market trends							
5. Evaluate the systems based on the safety criteria to environment							
6. Create the methodology for new equipments to user needs							
Module: 1         Health And Hospital Management	7 Hours						
Health organisation of the country, the State, the Cities and the Region, Management	of Hospital						
Organisation, Nursing Sector, Medical Sector, Central Services, Technical Department							
and Practice of Management by Objective, Transactional Analysis Human Relation	in Hospital,						
Importance of Team Work, Legal aspect in Hospital Management. Case study: Health survey	ey.						
Module: 2Regulatory And Voluntary Guidelines And Health Care Codes	8 Hours						
FDA Regulation, Joint Commission of Accreditation for Hospitals, National Fire Protection	Association						
Standard, ISO, NABL, ISO:13485, ISO:14791, risk management, Environmental regulation							
on risk management.	2						
Module: 3         Healthcare Supply Chain Management	7 Hours						
Essentials of healthcare supply chain management, designing sustainable health care s	upply chain,						
performance metrics, emerging trends in healthcare supply chain management.							
Module: 4 Clinical Engineering	8 Hours						
Role to be performed in Hospital, Manpower & Market, Professional Registration, Ma	intenance of						
Hospital support system, surveillance network, electric power management, Medical gas	production,						
waste disposal, inventory control. Case study: RF ID tag for inventory.							
Module: 5 Safety Equipments	7 Hours						
Operation of safety devices, personnel safety equipments, Gas mask, Radiation me							
equipment safety systems, elements of basic first aid, fire fighting, Case study: Safety Awa							
Module: 6         Equipment Maintenance Management	8 Hours						
Organizing the maintenance operation, biomedical equipment procurement procedure, prop							
compatibility, testing and installation, purchase and contract procedure, trained medical sta							
use of equipment and operating instructions. Maintenance of job planning, preventive maintenance,							
maintenance budgeting, contract maintenance.

Course code	ANALYTICAL INSTRUMENTATION	L	Т	Р	С	
20BM2010		3	0	0	3	
Course Object	ive:					
	tand the working of an instrument for a particular analysis with its mer	its, d	emei	its a	nd	
limitati	ons.					
	pecific technique employed for monitoring different pollutants in air a					
	he instruments used in hospital for routine clinical analysis, drug and p		nacei	itical		
	laboratories, oil refineries and above all for environmental pollution monitoring.					
Course Outcomes:						
The Student wi						
1. Identif	various techniques and methods of analysis which occur in the variou	is reg	ions	of th	e	
spectru						
	rize the unique methods of separation of closely similar materials, the	most	pow	rful	L	
	as chromatography.					
3. Outline the important analytical methods of industrial gases and pollution monitor			ng			
instrum						
	the principle involved in pH and dissolved component analyzers.					
	the methods of electromagnetic resonance					
	ate the structures using microscopic methods of analysis.					
Module: 1         Colorimetry And Spectrophotometry		8 Hours				
	Invitro Diagnostics- Special methods of analysis - Beer-Lambert law					
	ctrophotometers - Single and double beam instruments - Sources a					
	eters - Types - Attenuated total reflectance flame photometers - A					
spectrophotometers – Sources and detectors – FTIR spectrophotometers – Flame emission photometers						
- Fluorescence spectrophotometer						
Module: 2	Chromatography			ours		
Different techniques – Gas chromatography – Detectors – Liquid chromatographs – Applications – High-						
pressure liquid chromatographs – Applications.						
Module: 3	Gas Analyzers And Pollution Monitoring Instruments			ours		
	analyzers - Oxygen, NO2 and H2S types, IR analyzers, ther					
	vsis based on ionization of gases. Air pollution due to carbon monoxid	de, h	ydro	carbo	ons,	
nitrogen oxides	, sulphur dioxide estimation - Dust and smoke measurements					

Mod	lule: 4	pH Meters and Disso	lved Component Analyzers	8 Hours		
			lectrodes, hydrogen electrodes, reference electro			
ion e	electrodes, an	mmonia electrodes, cyc	lic voltametry, biosensors, dissolved oxygen analy	zer – Sodium		
anal	yzer – Silico	n analyzer.				
Mod	lule: 5	Electro Magnetic Res	sonance	7 Hours		
NMR – Basic principles – NMR spectrometer - Applications. Electron Spin Resonance spectroscopy– Basic principles, Instrumentation and applications.						
Mod	lule: 6	Microscopic Techniq	ues	8 Hours		
Scan	Scanning Electron Microscope (SEM), - Basic principles, Instrumentation and applications.					
Tran	smission Ele	ectron Microscope (TEI	M) – Basic principles – Instrumentation and applic	ations. Mass		
spec	trometers –	Different types – Applie	cations.

# **Course Objectives:**

To impart knowledge on

- 1. Phase diagrams and alloys
- 2. Electric, Mechanical and Magnetic properties of materials
- 3. Advanced Materials used in engineering applications

# **Course Outcomes:**

The Student will be able to

- 1. Describe the various phase diagrams and their applications
- 2. Explain the applications of Ferrous alloys
- 3. Discuss about the electrical properties of materials
- 4. Summarize the mechanical properties of materials and their measurement
- 5. Differentiate magnetic, dielectric and superconducting properties of materials
- 6. Describe the application of modern engineering materials

# Module 1: Introduction (6 hrs)

Historical perspective-Classification-Atomic Structure and Inter atomic Bonding –Structure of Crystalline solids- Phase diagrams

# Module 2: Ferrous Alloys (9 hrs)

The iron-carbon equilibrium diagram - phases, invariant reactions - microstructure of slowly cooled steels - eutectoid steel, hypo and hypereutectoid steels - effect of alloying elements on the Fe-C system - diffusion in solids - Fick's laws - phase transformations - T-T-T-diagram for eutectoid steel – pearlite, bainite and martensite transformations

# Module 3: Electrical Properties (9 hrs)

Conducting materials-quantum free electron theory -Fermi Dirac Statistics-Band theory of solids - the density of states. Magnetostriction. Electron ballistics- materials for thermionic emission electron guns-electron gun for electron beam machining-electric discharge plasma - EDM machining.

# Module 4: Mechanical Properties (8 hrs)

Tensile test - plastic deformation mechanisms - slip and twinning - strengthening methods - strain hardening - refinement of the grain size - solid solution strengthening - precipitation hardening - creep resistance - creep curves - mechanisms of creep - creep-resistant materials - fracture - the Griffith criterion - critical stress intensity factor and its determination - fatigue failure - fatigue tests - methods of increasing fatigue life - hardness - Rockwell and Brinell hardness - Knoop and Vickers microhardness.

# Module 5: Magnetic, Dielectric And Superconducting Materials (8 hrs)

Ferromagnetism – domain theory – types of energy – hysteresis – hard and soft magnetic materials – ferrites - dielectric materials – types of polarization – Langevin-Debye equation – frequency effects on polarization - dielectric breakdown – insulating materials – Ferroelectric materials - superconducting materials and their properties.

# Module 6: Advanced Materials (5 hrs)

Liquid crystals-types-application as display devices-photonic crystals- ferro elastic materials-multiferroics, Bio mimetic materials. Composites-nanophase materials-physical properties and applications.

# **Text Books:**

- 1. Balasubramaniam, R. "Callister's Materials Science and Engineering". Wiley India Pvt. Ltd., 2014.
- 2. Raghavan, V. "Physical Metallurgy: Principles and Practice". PHI Learning, 2015.

# **Reference Books:**

- 1. William D CallisterJr, "Materials Science and Engineering-An Introduction", John Wiley and Sons Inc., Sixth Edition, New York, 2010.
- 2. Raghavan, V. "Materials Science and Engineering : A First course". PHI Learning, 2015
- 3. Shetty.M.N., "Material Science and Engineering Problems with Solutions", PHI, 2016
- 4. Shaffer J P, Saxena A, Antolovich S D, Sanders T H Jr and Warner S B, "The Science and Design of Engineering Materials", McGraw Hill Companies Inc., New York, 1999.

19RO1002	ENGINEERING PRACTICES	L	Т	Р	С	
19K01002	ENGINEERINGIKACHCES	1	0	3	2.5	

# **Course Objectives:**

To impart knowledge on

- 1. Carpentry Joints, Fitting and Welding Practices
- 2. Basics of Electronic Circuit components, Instruments and Wiring
- 3. PCB design and fabrication

# **Course Outcomes:**

The Student will be able to

- 1. Assemble mechanical devices and equipment by applying carpentry and fitting practices.
- 2. Apply welding and drilling skills to fabricate useful products.
- 3. Design simple electric circuits and apply different types of wiring.
- 4. Identify the operation and handling of measuring instruments.
- 5. Perform troubleshooting of electric motors
- 6. Fabricate PCB boards for specific applications.

# List of Experiments:

- 1. Making of rectangular planning in carpentry
- 2. Making of middle lap joint in carpentry
- 3. Making of Square filing in Fitting

- 4. Making of V joint in Fitting
- 5. Drilling holes and welding of Mild Steel plates
- 6. Study of simple electrical circuit diagrams and wiring
- 7. Study of electrical connection of basic electrical equipment
- 8. Study of handling of all measuring instruments and Oscilloscope (Multimeter, Wattmeter, Clamp meter, ammeter, voltmeter, CRO, DSO etc)
- 9. Study of Electrical Cables, HRC Fuse, MCB. simple relay and Contactors
- 10. Troubleshooting of Electric Motors
- 11. PCB layout design using software.
- 12. PCB fabrication, Components soldering and Trouble shooting
- 13. Assembly of simple Robots

10DO2001	THEODY AND DOOCD AMMING OF CNC MACHINES	L	1	Ľ	P	C	
19K02001	THEORY AND PROGRAMMING OF CNC MACHINES	3	(		0	3	

- 1. To study the design aspects of an automation system
- 2. Learn about the design of belt conveyors
- 3. Understand the issues involved during integration of automation components

## **Course Outcomes:**

The Student will be able to

- 1. Classify the types of CNC machines and read their electrical circuit diagram
- 2. Select the parameters for optimum performance and read the PLC ladder diagram with reference to the PLC I/O s
- 3. Perform the sizing of servomotors and do drive optimization.
- 4. Design electrical power, and control circuits for a CNC machine and interface various sensors to CNC/PLC
- 5. Develop CNC programs for lathes, select the right tools, take offsets and do machining of a component.
- 6. Estimate the machine hour rate of a CNC machine and do the regular and preventive maintenance.

## Module 1: Introduction (8 hrs)

History - Advantages and disadvantages of CNC, block diagram of CNC - Principle of operation- Features available in CNC systems. DNC, Networking of CNC machines - Ethernet. Electrical cabinet and control panel wiring. Electrical standards. Types Of CNC Machines : Types and constructional features of machine tools- Turning centres, machining centers, grinding machines, EDMs, turret punch press, laser and water jet cutting machines, Design considerations – Axis representations, Various operating modes of a CNC machine. **Module 2: Control Units (7 hrs)** 

Functions of CNC, system hardware, contouring control - interpolation, software development process. Parameters and diagnosis features. Interfacing with keyboard, monitor, field inputs, outputs, MPG. Open architecture systems and PC based controllers. Role of PLC in CNC machines.- hardware and I/O configuration.

## Module 3: Drive Units (8 hrs)

Axis drive arrangements, ball screw, timing belts and couplings, Analog and digital drives. AC&DC servomotors, DC and AC servo drives for axis motors, servo tuning. Stepper motors and drives, spindle motors & drives- DC &AC. Selection criteria, drive optimization and protection.

## Module 4: Control And Feedback Devices (8 hrs)

MCCB, MCB, control relays, contactors, overload relays, cables & terminations. Applications of feedback devices in CNC machines- Absolute and incremental encoders, resolvers, linear scales, Proximity switches, limit switches – Thermal sensors, pressure and float switches. Positioning of sensors in CNC.

## Module 5: NC Part Programming Process (8 hrs)

Axis notation, EIA and ISO codes, Explanation of basic codes. Tooling concepts, machining methods, part geometry and writing of tool motion statements. Canned cycles. Development of simple manual part programs for turning operations. Simulation of part programme. Post processors - CNC part programming with CAD/CAM systems.

## Module 6: Economics And Maintenance (7 hrs)

Factors influencing selection of CNC Machines, Cost of operation of CNC Machines, Practicalaspects of introducing CNC machines in industries, Maintenance of CNC Machines Preventive Maintenance, TPM, Importance of earthing on the performance and life of machines.

## **Text Books:**

19RO2002	AUTONOMOUS VEHICLES	L	Т	Р	С
19KO2002	AUTONOMOUS VEHICLES	3	0	0	3

## **Course Objectives:**

- 1. Introduce the fundamental aspects of Autonomous Vehicles.
- 2. Gain Knowledge about the Sensing Technology and Algorithms applied in Autonomous vehicles.
- 3. Understand the Connectivity Aspects and the issues involved in driverless cars.

## **Course Outcomes:**

The Student will be able to

- 1. Describe the evolution of Automotive Electronics and the operation of ECUs.
- 2. Compare the different type of sensing mechanisms involved in Autonomous Vehicles.
- 3. Discuss about the use of computer vision and learning algorithms in vehicles.
- 4. Summarize the aspects of connectivity fundamentals existing in a driverless car.
- 5. Identify the different levels of automation involved in an Autonomous Vehicle.
- 6. Outline the various controllers employed in vehicle actuation.

## Module 1: Introduction (8 hrs)

Evolution of Automotive Electronics -Basic Control System Theory applied to Automobiles -Overview of the Operation of ECUs -Infotainment, Body, Chassis, and Powertrain Electronics-Advanced Driver Assistance Systems-Autonomous Vehicles

## Module 2: Sensor Technology for Autonomous Vehicles (8 hrs)

Basics of Radar Technology and Systems -Ultrasonic Sonar Systems -LIDAR Sensor Technology and Systems -Camera Technology -Night Vision Technology -Use of Sensor Data Fusion -Kalman Filters

## Module 3: Computer Vision and Deep Learning for Autonomous Vehicles (7 hrs)

Computer Vision Fundamentals -Advanced Computer Vision -Neural Networks for Image Processing – TensorFlow -Overview of Deep Neural Networks -Convolutional Neural Networks

## Module 4: Connected Car Technology (8 hrs)

Connectivity Fundamentals - DSRC (Direct Short Range Communication) - Vehicle-to-Vehicle Technology and Applications -Vehicle-to-Roadside and Vehicle-to-Infrastructure Applications -Security Issues.

## Module 5: Autonomous Vehicle Technology (7 hrs)

Driverless Car Technology-Different Levels of Automation -Localization - Path Planning. Controllers to Actuate a Vehicle - PID Controllers -Model Predictive Controllers, ROS Framework

## Module 6:Autonomous Vehicles' Biggest Challenges (7 hrs)

Technical Issues, Security Issues, Moral and Legal Issues.

## **Text Books:**

19K02003	AUTOMOTIVE ENIDEDDED STSTENIS	3	0	0	1	3	ı.

## **Course Objectives:**

- 1. To introduce the basic components of modern automotive systems.
- 2. Understand the application of microcontrollers in ECU design and the In-Vehicle Communication protocols.
- 3. To provide an overview of the Automotive Open Systems Architecture (AUTOSAR)

## **Course Outcomes:**

The Student will be able to

- 1. Describe the function of basic components used in modern automotive systems.
- 2. Discuss about the applications of microcontrollers in ECU design.
- 3. Summarize the various In-Vehicle Communication Protocols and their features.
- 4. Outline the diagnostic protocols and their functions.
- 5. Illustrate the practical applications of Automotive Open Systems Architecture (AUTOSAR)
- 6. Discuss about the Quality and Safety Standards to be adopted in Automotive Systems.

## Module 1: Automotive Embedded Systems (8 hrs)

Introduction to Modern Automotive Systems-Evolution of Electronics and Software in automobiles -ECUs and their application areas in Automotive -Engine Management Systems -Body & Comfort Electronics Systems -Infotainment Systems -Advanced Driver Assistance Systems and V2X Systems -Autonomous Driving Systems -Current Trends and Challenges

## Module 2: Micro Controllers in ECU Design (8 hrs)

Overview of AURIX Micro Controller -Architecture, Memory Map, Lock Step etc. -Peripherals used in Automotive Applications -GTM, QSPI, DSADC etc. -AURIX SafeTLib -Real time Operating Systems and Scheduling Concepts -Practical Experiments using AURIX Eval Kit.

## Module 3: In-Vehicle Communication Protocols (7 hrs)

Overview of In-Vehicle Communication Protocols – CAN, LIN, Flex Ray, MOST, Ethernet -Controller Area Network (CAN)-CANoe, CANalyzer Fundamentals -CAPL Scripting, Panel Simulation.

## Module 4: In-Vehicle Diagnostics (7 hrs)

Overview of Diagnostic Protocols - KWP 2000 and UDS.

## Module 5: AUTOSAR (Automotive Open Systems Architecture) (8 hrs)

Platform Based Development -AUTOSAR Overview -AUTOSAR RTE, BSW, SWC -AUTOSAR Methodology & Workflow -AUTOSAR Tools Overview -Practical Experiments using AUTOSAR Tools.

## Module 6: Automotive Quality, Safety and Security Standards (7 hrs)

Common Failures in Automotive Systems -ASPICE Development Process -MISRA C Standard -ISO 26262 Functional Safety Standard -SAE J3061 Security Standard.

19RO2004 ROBOTIC CONTROL SYSTEM	BOBOTIC CONTROL SYSTEM	L	Т	Р	С
19KU2004	<b>KOBOTIC CONTROL SISTEM</b>	3	0	0	3

## **Course Objectives:**

- 1. To provide knowledge on the various robotic systems with the help of mathematical models.
- 2. To introduce the control aspects of non-linear systems.
- 3. To learn the concepts of non-linear observer design.

## **Course Outcomes:**

The Student will be able to

- 1. Describe the characteristics of a robotic system from its dynamic model.
- 2. Analyze the stability of robotic systems with the help of theorems.
- 3. Illustrate the various task space control schemes available.
- 4. Discuss about the various Non Linear Control schemes.
- 5. Explain the concepts of Optimal Control System.
- 6. Develop nonlinear observer schemes.

## Module 1: Introduction and Overview of Robotic Systems and their Dynamics (8 hrs)

Forward and inverse dynamics. Properties of the dynamic model and case studies. Introduction to nonlinear systems and control schemes.

## Module 2: System Stability and Types of Stability (7 hrs)

Lyapunov stability analysis, both direct and indirect methods. Lemmas and theorems related to stability analysis.

## Module 3: Joint Space and Task Space Control Schemes (7 hrs)

Position control, velocity control, trajectory control and force control.

## Module 4: Nonlinear Control Schemes (8 hrs)

Proportional and derivative control with gravity compensation, computed torque control, sliding mode control, adaptive control, observer based control and robust control.

**Module 5: Optimal Control:** Introduction - Time varying optimal control – LQR steady state optimal control – Solution of Ricatti's equation – Application examples.

**Module 6: Nonlinear Observer Schemes**: Design based on acceleration, velocity and position feedback. Numerical simulations using software packages.

## **Text Books:**

19RO2005	INDUSTRIAL ROBOTICS AND MATERIAL	L	Т	Р	С
19K02005	HANDLING SYSTEMS	3	0	0	3

## **Course Objectives:**

- 1. Learn about the types of robots used in material handling systems.
- 2. Understand the use of vision systems in automation systems.
- 3. Gain knowledge on the different methods of material handling.

## **Course Outcomes:**

## The Student will be able to

- 1. Differentiate the various types of Industrial Robots and their architecture.
- 2. Apply the concepts of image processing for robotic inspection systems.
- 3. Analyze the applications of robots in various industrial application.
- 4. Design and fabricate simple grippers for pick and place application.
- 5. Identify the right Robot for a given industrial application.
- 6. Select the right material handling system for a given application.

## Module 1: Introduction (7 hrs)

Types of industrial robots, Load handling capacity, general considerations in Robotic material handling, material transfer, machine loading and unloading, CNC machine tool loading, Robot centered cell.

## Module 2: Robots for Inspection (8 hrs)

Robotic vision systems, image representation, object recognition and categorization, depth measurement, image data compression, visual inspection, software considerations.

## Module 3: Other Applications (7 hrs)

Application of Robots in continuous arc welding, Spot welding, Spray painting, assembly operation, cleaning, robot for underwater applications.

## Module 4: End Effectors (8 hrs)

Gripper force analysis and gripper design for typical applications, design of multiple degrees of freedom, active and passive grippers.

## Module 5: Selection of Robot (7 hrs)

Factors influencing the choice of a robot, robot performance testing, economics of robotization, Impact of robot on industry and society.

## Module 6: Material Handling (8 hrs)

Concepts of material handling, principles and considerations in material handling systems design, conventional material handling systems - industrial trucks, monorails, rail guided vehicles, conveyor systems, cranes and hoists, advanced material handling systems, automated guided vehicle systems, automated storage and retrieval systems(ASRS), bar code technology, radio frequency identification technology. Introduction to Automation Plant design software.

19RO2006	MICROROBOTICS	L	<u>'</u>	ſ	P	C	
19K02000	WIICKUKUDUTICS	3	6	)	0	3	

## **Course Objectives:**

- 1. Provide brief introduction to micromachining and the principles of microsystems
- 2. Understand the various flexures, actuators and sensor systems.
- 3. Discuss the methods of implementation of micro robots.

## **Course Outcomes:**

The Student will be able to

- 1. Describe the principles of microsystems and micromachining.
- 2. Analyze the effects of scaling laws on physical and electrical properties and the materials to be used to MEMS.
- 3. Specify the characteristics of various flexures, actuators and sensor systems
- 4. Provide a task specification of micro robots and its applications based on the knowledge about micro robots
- 5. Outline the various methods of implementation of micro robots.

6. Discuss about the principle of micro fabrication and micro assembly.

## Module 1: Introduction (7 hrs)

MST (Micro System Technology) – Micromachining - Working principles of Microsystems - Applications of Microsystems.

## Module 2: Scaling Laws and Materials for MEMS (8 hrs)

Introduction - Scaling laws - Scaling effect on physical properties, scaling effects on Electrical properties, scaling effect on physical forces. Physics of Adhesion - Silicon-compatible material system - Shape memory alloys - Material properties: Piezoresistivity, Piezoelectricity and Thermoelectricity.

## Module 3: Flexures, Actuators and Sensors (7 hrs)

Elemental flexures - Flexure systems - Mathematical formalism for flexures. Electrostatic actuators, Piezoelectric actuators, Magneto-strictive actuators. Electromagnetic sensors, Optical-based displacement sensors, Motion tracking with microscopes.

## Module 4: Micro robotics (8 hrs)

Introduction, Task specific definition of micro-robots - Size and Fabrication Technology based definition of micro robots - Mobility and Functional-based definition of micro-robots - Applications for MEMS based micro-robots.

## Module 5: Implementation of Micro robots (8 hrs)

Arrayed actuator principles for micro-robotic applications – Micro-robotic actuators - Design of locomotive micro-robot devices based on arrayed actuators. Micro-robotics devices: Micro-grippers and other micro-tools - Micro conveyors - Walking MEMS Micro-robots – Multi-robot system: Micro-robot powering, Micro-robot communication.

## Module 6: Micro fabrication and Micro assembly (7 hrs)

Micro-fabrication principles - Design selection criteria for micromachining - Packaging and Integration aspects – Micro-assembly platforms and manipulators.

## **Text Books:**

- 1. Mohamed Gad-el-Hak, "The MEMS Handbook", CRC Press, New York, 2002.
- 2. Yves Bellouard, "Microrobotics Methods and Applications", CRC Press, Massachusetts, 2011.

## 19R02007COGNITIVE ROBOTICSLTPC3003

## **Course Objectives:**

- 1. Provide brief introduction to robot cognition and perception
- 2. Understand the concepts of path planning algorithms.
- 3. Gain knowledge on the robot programming packages used in localization and mapping.

## **Course Outcomes:**

The Student will be able to

- 1. Discuss about the basics of robot cognition and perception
- 2. Illustrate the different methods of map building and the robot simulation and execution of a program
- 3. Analyze the various path planning techniques by briefing about the robot's environment and explaining about the programs used
- 4. Develop knowledge about simultaneous localization and mapping based techniques and paradigms.
- 5. Elaborate the various robot programming packages for display, tele-operation and other applications.
- 6. Describe the aspects of Imaging Techniques used in Robotic Applications.

## Module 1: Cybernetic View of Robot Cognition And Perception (6 hrs)

Introduction to the Model of Cognition, Visual Perception, Visual Recognition, Machine Learning, Soft Computing Tools and Robot Cognition.

## Module 2: Map Building (8 hrs)

Introduction, Constructing a 2D World Map, Data Structure for Map Building, Explanation of the Algorithm, An Illustration of Procedure Traverse Boundary, An Illustration of Procedure Map Building ,Robot Simulation, Execution of the Map Building Program.

## Module 3: Randomized Path Planning (8 hrs)

Introduction, Representation of the Robot's Environment, Review of configuration spaces, Visibility Graphs, Voronoi diagrams, Potential Fields and Cell Decomposition, Planning with moving obstacles, Probabilistic Roadmaps, Rapidly exploring random trees, Execution of the Quad tree-Based Path Planner Program.

Module 4: Simultaneous Localization and Mapping (SLAM) (8 hrs)

Problem Definition, Mathematical Basis, Examples: SLAM in Landmark Worlds, Taxonomy of the SLAM Problem, Extended Kalman filter, Graph-Based Optimization Techniques, ParticleMethods Relation of Paradigms.

## Module 5: Robot Programming Packages (8 hrs)

Robot Parameter Display, Program for BotSpeak, Program for Sonar Reading Display, Program for Wandering Within the Workspace, Program for Tele-operation, A Complete Program for Autonomous Navigation.

## Module 6: Imaging Geometry: (7 hrs)

Introduction – Necessity for 3D Reconstruction – Building Perception – Imaging Geometry – Global Representation – Transformation to Global Co-ordinate System.

10003000	CLOUD DODOTICS	L	Т	Р	С	
19RO2008	CLOUD ROBOTICS	3	0	0	3	

## **Course Objectives:**

- 1. Provide an overview of telerobotics
- 2. Understand the concept of networked telerobotic systems
- 3. Provide knowledge on the functions of online robots

## **Course Outcomes:**

The Student will be able to

- 1. Discuss about the basic principles of telerobotics
- 2. Describe the concepts of wired and wireless communication for networked telerobotic systems.
- 3. Explain the fundamentals of robot manipulation and teleoperation
- 4. Design and fabricate the software architecture and interface for networked robot systems on the web
- 5. Analyze the performance of mobile robots controlled through the web
- 6. Outline the software architecture for telerobotics.

## Module 1: Introduction (6 hrs)

Telerobotics: Overview and background - Brief history.

## Module 2: Communications And Networking (8 hrs)

The Internet – Wired Communication Links – Wireless Links – Properties of Networked Telerobotics – Building a Networked Telerobotic system – State command Presentation – Command Execution/ State Generation – Collaborative Control

## Module 3: Fundamentals Of Online Robots (8 hrs)

Introduction – Robot Manipulators – Teleoperation – Teleoperation on a local network – Teleoperation via a constrained link.

## Module 4: Online Robots (8 hrs)

Introduction to networked robot system on the Web – Software Architecture and design – Interface design. **Module 5: Remote Mobility (8 hrs)** 

Autonomous Mobile Robot on the Web – Mobile Mini Robots – Performance of Mobile Robots controlled through WEB – Handling Latency in Internet based Tele operation

## Module 6: Case Study (7 hrs)

Computer Networked Robotics - Online Robots and the Robot Museum.

## **Text Books:**

1000000	MEDICALDODOTICS	L	Т	Р	С
19RO2009	MEDICALROBOTICS	3	0	0	3

- 1. Provide knowledge on the application of robotics in the field of health care
- 2. Overview of the sensor requirements for localization and tracking in medical applications
- 3. Understand the design aspects of medical robots

## **Course Outcomes:**

The Student will be able to

- 1. Describe the types of medical robots and the concepts of navigation and motion replication.
- 2. Discuss about the sensors used for localization and tracking
- 3. Summarize the applications of surgical robotics
- 4. Outline the concepts in Rehabilitation of limbs and brain machine interface
- 5. Classify the types of assistive robots.
- 6. Analyze the design characteristics, methodology and technological choices for medical robots.

## Module 1: Introduction (7 hrs)

Types of medical robots - Navigation - Motion Replication - Imaging - Rehabilitation and Prosthetics - State of art of robotics in the field of healthcare.

## Module 2: Localization And Tracking (8 hrs)

Position sensors requirements - Tracking - Mechanical linkages - Optical - Sound-based - Electromagnetic - Impedance-based - In-bore MRI tracking - Video matching - Fiber optic tracking systems - Hybrid systems.

## Module 3: Control Modes (8 hrs)

Radiosurgery - Orthopedic Surgery - Urologic Surgery and Robotic Imaging - Cardiac Surgery - Neurosurgery - case studies.

## Module 4: Rehabilitation (7 hrs)

Rehabilitation for Limbs - Brain-Machine Interfaces - Steerable Needles - case studies.

Module 5: Robots In Medical Care (7 hrs)

Assistive robots -types of assistive robots - case studies.

## Module 6: Design of Medical Robots (8 hrs)

Characterization of gestures to the design of robots- Design methodologies- Technological choices - Security.

## **Text Books:**

19RO2010	MACHINE LEARNING FOR ROBOTICS	L	Т	Р	С
19K02010	WACHINE LEAKINING FOR ROBOTICS	3	0	0	3

## **Course Objectives:**

- 1. Understanding the concepts of machine learning
- 2. Study in detail about unsupervised learning, dimensionality concepts
- 3. Concepts of neural networks in robots with case studies.

## **Course Outcomes:**

The Student will be able to

- 1. Discuss about the concepts of machine learning
- 2. Describe the types of trees and bias
- 3. Outline the supervised learning methods with various case studies
- 4. Compare the learning methodologies and dimensionality concepts
- 5. Summarize the applications of neural networks in robotic applications.

## 6. Illustrate the applications of machine learning using case studies.

## Module 1: Introduction (7 hrs)

Machine learning – Varieties of Machine learning – Learning Input- Output functions: Types of learning – Input Vectors – Outputs – Training regimes – Noise – Performance Evaluation.

## Module 2: Foundations Of Supervised Learning (7 hrs)

Decision trees and inductive bias – Geometry and nearest neighbors – Logistic regression – Perceptron – Binary classification.

## Module 3: Advanced Supervised Learning (8 hrs)

Linear models and gradient descent – Support Vector machines – Naïve Bayes models and probabilistic modeling – Model selection and feature selection – Model Complexity and Regularization.

## Module 4: Unsupervised Learning (8 hrs)

Curse of dimensionality, Dimensionality Reduction, PCA, Clustering – K-means – Expectation Maximization Algorithm – Mixtures of latent variable models – Supervised learning after clustering – Hierarchical clustering **Module 5: Neural Networks: (7 hrs)** 

Network Representation, Feed-forward Networks, Back propagation, Gradient-descent method.

## Module 6: Case Studies: (8 hrs)

Line following using Supervised Learning techniques – A simulation model for understanding both regression and classification techniques - Study of the effectiveness of the Bias-variance. Obstacle avoidance and navigation of a mobile robot in an unknown environment with the help of Neural Network -Use of stochastic PCA and the PCA neural network to find low dimensional features. Building a feed-forward neural network to ascertain automatic navigational queries.

19RO2011	DODOT ODED ATING SVETEME	L	Т	Р	С	
19K02011	ROBOT OPERATING SYSTEMS	3	0	0	3	

## **Course Objectives:**

- 1. Introduce the basics of Robot Operating Systems and its architecture.
- 2. Provide knowledge on the hardware interfacing aspects.
- 3. Understand the applications of ROS in real world complex applications

## **Course Outcomes:**

The Student will be able to

- 1. Describe the need for ROS and its significance
- 2. Summarize the Linux commands used in robotics
- 3. Discuss about the concepts behind navigation through file system.
- 4. Explain the concepts of Node debugging
- 5. Analyze the issues in hardware interfacing
- 6. Discuss about the applications of ROS

## Module 1: Introduction to ROS: (7 hrs)

Introduction – The ROS Equation - History - distributions -difference from other meta-operating systems– services - ROS framework – operating system – releases.

## Module 2: Introduction to Linux Commands (7 hrs)

UNIX commands - file system – redirection of input and output - File system security - Changing access rights – process commands – compiling, building and running commands – handling variables

## Module 3: Architecture of Operating System (8 hrs)

File system - packages – stacks – messages – services – catkin workspace – working with catkin workspace – working with ROS navigation and listing commands

## Module 4: Computation Graph Level (7hrs)

Navigation through file system -Understanding of Nodes – topics – services – messages – bags – master – parameter server.

## Module 5: Debugging And Visualization (8 hrs)

Debugging of Nodes – topics – services – messages – bags – master – parameter – visualization using Gazebo – Rviz – URDF modeling – Xacro – launch files.

Hardware Interface: Sensor Interfacing – Sensor Drivers for ROS – Actuator Interfacing – Motor Drivers for ROS.

## Module 6: Case Studies: Using ROS In Real World Applications (8 hrs)

 $Navigation\ stack-creating\ transforms\ -odometer\ -\ imu\ -\ laser\ scan\ -\ base\ controller\ -\ robot\ configuration\ -\ cost\ map\ -\ base\ local\ planner\ -\ global\ planner\ -\ localization\ -\ sending\ goals\ -\ TurtleBot\ -\ the\ low\ cost\ mobile\ robot.$

10000010	A DELETAL INTELL CENCE IN DODOTICS	L	Т	Р	С	
19RO2012	ARTIFICIAL INTELLIGENCE IN ROBOTICS	3	0	0	3	

## **Course Objectives:**

- 1. Study the concepts of Artificial Intelligence.
- 2. Learn the methods of solving problems using Artificial Intelligence.
- 3. Introduce the concepts of Expert Systems and Machine learning.

## **Course Outcomes:**

The Student will be able to

- 1. Identify problems that are amenable to solution by AI methods.
- 2. Identify appropriate AI methods to solve a given problem.
- 3. Formalize a given problem in the language/framework of different AI methods.
- 4. Summarize the learning methods adopted in AI.
- 5. Design and perform an empirical evaluation of different algorithms on a problem formalization.
- 6. Illustrate the applications of AI in Robotic Applications.

## Module 1: Introduction (7 hrs)

History, state of the art, Need for AI in Robotics. Thinking and acting humanly, intelligent agents, structure of agents.

## Module 2: Problem Solving (8 hrs)

Solving problems by searching –Informed search and exploration–Constraint satisfaction problems– Adversarial search, knowledge and reasoning–knowledge representation – first order logic.

## Module 3: Planning (8 hrs)

Planning with forward and backward State space search – Partial order planning – Planning graphs– Planning with propositional logic – Planning and acting in real world.

## Module 4: Reasoning (7hrs)

Uncertainty – Probabilistic reasoning–Filtering and prediction–Hidden Markov models–Kalman filters– Dynamic Bayesian Networks, Speech recognition, making decisions.

## Module 5: Learning ( 8 hrs)

Forms of learning – Knowledge in learning – Statistical learning methods –reinforcement learning, communication, perceiving and acting, Probabilistic language processing, and perception.

## Module 6: AI In Robotics (7 hrs)

Robotic perception, localization, mapping- configuring space, planning uncertain movements, dynamics and control of movement, Ethics and risks of artificial intelligence in robotics.

10002012	02013 INDUSTRIAL ENERGY MANAGEMENT SYSTEM	L	Т	Р	С
19K02013	INDUSTRIAL ENERGY MANAGEMENT STSTEM	3	0	0	3

## **Course Objectives:**

- 1. Provide an overview of Energy Management System in Industry.
- 2. Gain understanding of the renewable sources.
- 3. Introduce the concepts of waste management in industry.

## **Course Outcomes:**

The Student will be able to

- 1. Discuss the need for industrial energy balance
- 2. Describe the functioning of utility plants and renewable energy sources
- 3. Compare the various distribution systems.
- 4. Explain the functioning of equipment used in energy management.
- 5. Summarize the concept of energy recovery from waste and the need of automation.
- 6. Discuss about the use of computers in Energy Management.

## Module 1: Introduction (7 hrs)

World Energy Resources - Industrial Energy Balance - Energy End users – Industrial Energy Consumption. Module 2: Utility Plants and Renewable Sources (8 hrs)

Solar, wind, hydraulic, energy from waste – energy storage – applicability in industry – Electrical Sub Stations – Boiler Plants

Module 3: Distribution Systems (6 hrs)

Electric Distribution Systems – Thermal Distribution Systems – Co generation plants.

## Module 4: Equipment Facilities (8 hrs)

Pumps and Fans – Air Compressors – Industrial Cooling Systems – Heat Exchangers.

## Module 5: Waste Management (8 hrs)

Introduction - Energy Recovery from Waste - Waste and Energy Management Functions in Industry.

## Module 6: Computers for Energy Management (8 hrs)

Introduction – Factory Functioning – Energy Saving – Control of Boiler Plants and Substations – Air compressor plan control.

## **Text Books:**

19RO2014	<b>ROBOTICS AND AUTOMATION IN FOOD</b>	L	Т	Р	С
	INDUSTRY	3	0	0	3

- 1. To introduce the need for robotics and automation in food industry
- 2. Provide an overview of the sensors and gripper mechanisms for food sector.
- 3. Understanding the various applications of automation in food industry.

## **Course Outcomes:**

The Student will be able to

- 1. Specify the characteristics of robots used in food industry.
- 2. Identify the applications of sensors in food industry.
- 3. Describe about the different types of gripper mechanisms
- 4. Describe the use of sensor networks and quality control in food sector
- 5. Discuss about the advanced methods for control of food process.
- 6. Summarize the applications of automation and robotics in food industry.

## Module 1: Introduction (7 hrs)

Process Control Systems and Structure in the Food Industry – Process Control Methods – Robotics in the food industry – Automation – Specification for a food sector robot – future trends.

## Module 2: Sensors and Automation (8 hrs)

Sensors for automated food process control – Special Considerations – Measurement Methods – Device Integration – Applications - Machine Vision- Optical Sensors – SCADA in food industry.

## Module 3: Gripper Technology ( 8 hrs)

Gripper Challenges in food industry – Gripping Physics – Pinching and enclosing grippers – Penetrating Grippers – Suction Grippers – Surface Effect Grippers –Selection of appropriate gripping mechanism.

## Module 4: Sensor Networks and Intelligent Quality Control Systems (8 hrs)

Wireless sensor networks – applications in agriculture and food production – future trends – intelligent control systems using fuzzy logic.

## Module 5: Advanced Methods for control of food processes (7 hrs)

Introduction – Case Study of Bio conversion in a batch fed reactor – Design of PID Controller for fed batch process – Real time optimization.

## Module 6: Applications (7 hrs)

Case Study – Bulk sorting – Food chilling and processing – meat processing – poultry industry –sea food processing – confectionary -

## **Text Books:**

# 19RO2015NEURAL NETWORKS AND FUZZY SYSTEMSLTPC3003

## **Course Objectives:**

- 1. Introduce the fundamentals of Neural Networks and its applications.
- 2. Provide an overview of deep learning and convolutional neural networks.
- 3. Gain understanding about the fundamentals of Fuzzy Logic and its applications

## Course Outcomes:

The Student will be able to

- 1. Classify the types of neural networks.
- 2. Discuss about the applications of neural networks.
- 3. Describe the concepts of deep learning and convolutional neural networks
- 4. Compare fundamentals of classical logic and fuzzy logic concepts.
- 5. Characterize the fuzzy membership functions.
- 6. Summarize the applications of fuzzy logic controllers.

## Module 1: Introduction to Neural Networks (7 hrs)

Differences between Biological and Artificial Neural Networks - Typical Architecture, Common Activation Functions, McCulloch - Pitts Neuron, Simple Neural Nets for Pattern Classification, Linear Separability -Hebb Net, Perceptron, Adaline, Madaline - Architecture, algorithm, and Simple Applications.

## Module 2: Neural Network Applications (8 hrs)

Training Algorithms for Pattern Association - Hebb rule and Delta rule, Heteroassociative, Autoassociative and Iterative Auto associative Net, Bidirectional Associative Memory - Introduction to Neural Network Controllers

## Module 3: Deep Learning and Convolution Neural Networks (8 hrs)

Evolution of deep learning – Impact of deep learning – Motivation for deep architecture – Applications – Deep Learning in Computer Vision – Convolutional Neural Networks – Popular CNN Architecture – Simple Applications.

## Module 4: Classical and Fuzzy Sets and Relations (7 hrs)

Properties and Operations on Classical and Fuzzy Sets, Crisp and Fuzzy Relations - Cardinality, Properties and Operations, Composition, Tolerance and Equivalence Relations, Simple Problems.

## Module 5: Membership Functions (8 hrs)

Features of membership function, Standard forms and Boundaries, fuzzification, membership value assignments, Fuzzy to Crisp Conversions, Defuzzification methods.

## Module 6: Applications (7 hrs)

Neural Networks: Case Studies: Inverted Pendulum, CMAC, Robotics, Image compression, and Control systems - Fuzzy Logic: Mobile robot navigation, Autotuning a PID Controller.

## **Text Books:**

10002016		L	Т	Р	С
19RO2016	MICROCONTROLLERS FOR ROBOTICS	3	0	0	3

## **Course Objectives:**

- 1. To impart basic knowledge about architecture of controller.
- 2. To get familiarized with the instruction sets in controller.
- 3. To explore the necessity of controller in real time applications.

## **Course Outcomes:**

The Student will be able to

- 1. Describe the architecture of 8051 controllers
- 2. Classify different types of instruction set and addressing modes
- 3. Express their knowledge in designing a system using 8051
- 4. Discuss the general features of RISC architecture
- 5. Summarize the specific features of cortex controller
- 6. Develop interfacing program with controller

## Module 1: The 8051 Architecture (8 hrs)

Internal Block Diagram - CPU - ALU - address - data and control bus - working registers - SFRs - Clock and RESET circuits - Stack and Stack Pointer - Program Counter - I/O ports - Memory Structures - Data and Program Memory - Timing diagrams and Execution Cycles. Comparison of 8-bit microcontrollers - 16-bit and 32-bit microcontrollers. Definition of embedded system and its characteristics - Role of microcontrollers in embedded Systems. Overview of the 8051 family.

## Module 2: Instruction Set and Programming (8 hrs)

Addressing modes: Introduction - Instruction syntax - Data types - Subroutines Immediate addressing - Register addressing - Direct addressing - Indirect addressing - Relative addressing - Indexed addressing - Bit inherent addressing - bit direct addressing. 8051 Instruction set - Instruction timings. Data transfer instructions - Arithmetic instructions - Logical instructions - Branch instructions - Subroutine instructions - Bit manipulation instruction. Assembly language programs - C language programs. Assemblers and compilers. Programming and debugging tools.

## Module 3: Memory and I/O Interfacing: (7 hrs)

Memory and I/O expansion buses - control signals - memory wait states. Interfacing of peripheral devices such as General Purpose I/O - ADC - DAC - timers - counters - memory devices. External Communication Interface (8 Hours) Synchronous and Asynchronous Communication. RS232 - SPI - I2C. Introduction and interfacing to protocols like Blue-tooth and Zig-bee.

## Module 4: High Performance RISC Architecture: (8 hrs)

ARM 9 RISC architecture merits and demerits – The programmer's model of ARM Architecture – 3- stage pipeline ARM organization – ARM instruction execution – Salient features of ARM instruction set

## Module 5: High Performance Microcontroller Architectures: (8 hrs)

Introduction to the Cortex-M Processor Family - ARM 'Cortex-M4' architecture for microcontrollers – Thumb 2 instruction technology – Internal Registers - Nested Vectored Interrupt controller - Memory map - Interrupts and exception handling – Applications of Cotex-M4 architecture

## Module 6: Applications: (6 hrs)

LED – LCD and keyboard interfacing. Stepper motor interfacing – DC Motor interfacing – sensor interfacing.

## **Text Books:**

- 1. M. A.Mazidi, J. G. Mazidi and R. D. McKinlay, "The8051Microcontroller and Embedded Systems: Using Assembly and C", Pearson Education, 2007.

19RO2017	MICROCONTROLLERS LABORATORY FOR	L	Т	Р	С
	ROBOTICS	0	0	2	1

## **Course Objectives:**

- 1. To enable the students to understand the programming techniques of Microcontrollers.
- 2. To design suitable sensor application using Microcontrollers.
- 3. To understand the concepts of peripherals

## **Course Outcomes:**

The Student will be able to

- 1. Understand and apply the fundamentals of assembly level programming of Microcontroller.
- 2. Work with standard real time interfaces of Microcontroller.
- 3. Generate signals with Microcontroller.
- 4. Perform timer-based operation with Microcontroller.
- 5. Develop a motor control with Microcontroller.
- 6. Develop interfacing with sensor

## List of Experiments

- 1. Arithmetic operations
- 2. Sorting of number
- 3. Concepts of timer
- 4. Interfacing I/O peripherals
- 5. Interfacing ADC
- 6. Interfacing DAC
- 7. PWM signal generation
- 8. Stepper motor interface
- 9. Interfacing keyboard and display unit
- 10. Interfacing temperature sensor
- 11. Interfacing accelerometer sensor
- 12. Interfacing servo motor

19BM1001	<b>BIOLOGY FOR ENGINEERS</b>	L	Т	Р	С	
19DW11001	DIOLOGI FOR ENGINEERS	3	0	0	3	

## Course Objectives:

- 1. To comprehend the fundamental principles of Life and Life forms
- 2. To impart knowledge on biodiversity and genetic theory.
- 3. To transfer knowledge in applications of biology in Industries.

## **Course Outcomes:**

The Student will be able to

- 1. Illustrate the fundamentals of living things, their classification, cell structure and biochemical constituents
- 2. Assess the significance of biodiversity in world.
- 3. Comprehend genetics and the immune system
- 4. Outline cause, symptoms, diagnosis and treatment of common diseases.
- 5. Comprehend nervous system and mechanochemistry.
- 6. Understand and apply future trends in biology.

## Module 1: Introduction To Life And Biomolecules: (8 hrs)

Classification of life forms – Body plan and Design of Life forms- Characteristics of living organisms--cell theory-structure of prokaryotic and eukaryotic cell-Introduction to biomolecules: definition-general classification and important functions of carbohydrates-lipids-proteins-nucleic acids vitamins and enzymes-genes and chromosome.

## Module 2: Biodiversity: (8 hrs)

Plant System: basic concepts of plant growth-nutrition-photosynthesis and nitrogen fixation-Animal System: elementary study of digestive-respiratory-circulatory-excretory systems and their functions. Microbial System: history-types of microbes-economic importance and control of microbes.

## Module 3: Evolution, Genetics And Immune System: (8 hrs)

Evolution: theories of evolution-Mendel's cell division-mitosis and meiosis-evidence of e laws of inheritance-variation and speciation- nucleic acids as a genetic material-central dogma immunity antigensantibody-immune response.

## Module 4: Human Diseases (7 hrs)

Lifestyle diseases -diabetes, obesity, blood pressure, heart disease, stroke, tuberculosis and diseases associated with drug abuse-Definition- causes, symptoms, diagnosis, treatment and prevention of cancer and Hepatitis.

## Module 5: Nervous System, Cell Signaling And Mechanochemistry (8 hrs)

Basics of nervous system and neural networks- General principles of cell signaling - ATP synthase structure - The bacterial flagellar motor - Cytoskeleton -Bioremediation.

## Module 6: Biology For Industrial Applications (6 hrs)

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-drugdiscovery-biofertilizer-biocontrolbiofilters-biosensors-biopolymers-bioenergy-biomaterials-biochips.

## **Text Books:**

19BM1002	INTRODUCTION TO BIOMEDICAL ENGINEERING	L	Т	Р	С	
19DW11002	INTRODUCTION TO DIOMEDICAL ENGINEERING	3	0	0	3	

## **Course Objectives:**

- 1. To introduce the field of biomedical engineering and role of biomedical engineers in society.
- 2. To impart knowledge on principles of various diagnostic, therapeutic equipment.
- 3. Achieve familiarity with some basic ethical framework and medical standards to be followed in hospitals.

## **Course Outcomes:**

The Student will be able to

- 1. Interpret the role of biomedical engineering in society
- 2. Demonstrate the principles of various diagnostic devices.
- 3. Identify the various techniques used in diagnosis though imaging.
- 4. Describe the working principles of various therapeutic and assist devices.
- 5. Understand device specific safety goals and standards.

6. Illustrate the concepts of ethical theories and moral principles for the health professions.

## Module 1: Introduction: (7 hrs)

Historical Perspective-Evolution of modern healthcare system-Role of Biomedical engineers in various domain -Professional status of biomedical engineering-General constraints in design of medical instrumentation systems.

## Module 2: Fundamentals of Medical Instrumentation (8 hrs)

Anatomy and Physiology – Sources of biomedical signals- basic medical instrumentation system-General block of medical instrumentation system – Performance requirements –General constraints in design of medical instruments.

## Module 3: Diagnostic Imaging (8 hrs)

X-rays, Nuclear Medical Imaging-Positron Emission Tomography-Magnetic Resonance Imaging Scanners-Diagnostic Ultrasound- Thermal imaging systems.

## Module 4: Introduction to Biomedical Equipment (8 hrs)

ECG – EEG - Cardiac Pacemakers - Cardiac Defibrillators – Haemodialysis Machines-Artificial Kidney-Dialyzers- Ventilators-Humidifiers, Nebulizers and Aspirators- Anaesthesia Machine.

## Module 5: Medical Safety Standards: (7 hrs)

Medical standards and regulations – Institutional Review Boards – Good Laboratory Practices -Good Manufacturing Practices -Human factors.

## Module 6: Ethical Practices in Health Care (7 hrs)

Morality and Ethics-A Definition of terms, Human Experimentation-Ethical issues in feasibility studies, Ethical issues in emergency use, Ethical issues in treatment use-Codes of ethics for bio engineers.

## **Text Books:**

1003/2001		L	Т	Р	С	
19BM2001	SENSORY AND MOTOR REHABILITATION	3	0	0	3	

## **Course Objectives:**

- 1. Study basics of Rehabilitation Engineering
- 2. Gain knowledge of the recent developments in the field of rehabilitation engineering.
- 3. Understand various assistive technology for vision & hearing

## **Course Outcomes:**

The Student will be able to

- 1. Identify the models of rehabilitation
- 2. Interpret the techniques for disabilities related to sensory and motor functions
- 3. Construct the test bench, tools and methods for troubleshooting
- 4. Compare various standards and specifications.
- 5. Decide quality and safety standards in design of devices for user needs
- 6. Formulate advanced methods to solve critical problems related to old aged

## Module 1: Introduction to Rehabilitation Engineering (7 hrs)

Introduction to Rehabilitation Engineering - PHAATE model - Clinical practice of rehabilitation Engineering - Low technology tools - Service delivery – Universal design - Design based on human ability - Standards for assistive technology - Test for best design

## Module 2: Wheel Chair (7 hrs)

Seating Assessment - Interventions in seating system - Biological aspects of tissue health - Support surface classification - Manual wheelchairs – Electric power wheelchairs - Power assisted wheelchairs - Wheel chair standards & tests - Wheel chair transportation

## Module 3: Orthotic & Prosthetic Devices (8 hrs)

Anatomy of upper & lower extremities - Classification of amputation types, Prosthesis prescription - Components of upper limb prosthesis - Fabrication of prosthesis - Components of lower limb prosthesis - Orthoses: Its need and types - Lower extremity- and upper extremity- orthoses - Slints – materials used.

## Module 4: Assistive Technology for Vision (8 hrs)

Anatomy of eye, Categories of visual impairment - Cortical & retinal implants - Auditory Information Display - Blind mobility aids – reading writing & graphics access, Orientation & navigation Aids

## Module 5: Assistive Technology for Hearing (7 hrs)

Anatomy of ear – hearing functional assessment - Surgical and non-surgical hearing aids - Assistive technology solutions for hearing Tactile - Information Display

## Module 6: Advanced Applications (8 hrs)

Functional Electrical stimulation - Robots in rehabilitation - Rehabilitation in sports -Daily living aids - Assistive technology for dyslexia - Computer & internet access for challenged people - Neural engineering in rehabilitation engineering - Role of biomedical engineering in rehabilitation

## **Text Books:**

1001/2002	DIOMEDICAL ODTICS	L	Т	Р	С
19BM2002	<b>BIOMEDICAL OPTICS</b>	3	0	0	3

- 1. Understand the characteristics of tissue when it is exposed to light
- 2. Learn about the Instrumentation in photonics
- 3. Know about various optical sources and applications of lasers in medicine

## **Course Outcomes:**

- The Student will be able to
  - 1. Recall the optical properties
  - 2. Explain the different measurement techniques in medical optics
  - 3. Illustrate the concept of biomedical optics in various real life applications
  - 4. Analyze the instrumentation involved in biomedical optics
  - 5. Apply laser instrumentation in medical diagnosis and therapy
  - 6. Discuss the therapeutic applications in the field of medicine

## Module 1: Optical Properties of the Tissues (8 hrs)

Optical properties of the tissues: Refraction, Scattering, Absorption, Light transport inside the tissue, Tissue properties, Laser Characteristics as applied to medicine and biology-Laser tissue Interaction-Chemical-Thermal-Electromechanical – Photoabalative processes.

## Module 2: Instrumentation in Photonics (8 hrs)

Instrumentation in photonics: Instrumentation for absorption, Scattering and emission measurements, excitation light sources – high pressure arc lamp, LEDs, Lasers, Optical filters, - optical detectors – Time resolved and phase resolved detectors.

## Module 3: Laser Applications (7 hrs)

Laser applications: Lasers in ophthalmology- Dermatology –Dentistry-Urology-Otolaryngology - Tissue welding.

## Module 4: Imaging System Fundamentals (7 hrs)

Endoscopic imaging system fundamentals, Angioscope, Videoscopy, Fluorescence endoscopy, Flourescent probes in biomedical applications

Module 5: Non Thermal Diagnostic Applications (8 hrs) Non thermal diagnostic applications: Optical coherence tomography, Elastography, Laser Induced Fluorescence (LIF)-Imaging, FLIM Raman Spectroscopy and Imaging, FLIM – Holographic and speckle application of lasers in biology and medicine. Module 6:Therapeutic Applications (7 hrs)

Therapeutic applications: Phototherapy, Photodynamic therapy (PDT) - Principle and mechanism - Oncological and nononcological applications of PDT - Biostimulation effect – applications-Laser Safety Procedures.

## **Text Books:**

- 1. Tuan Vo Dinh, Biomedicla Photonics Handbook, CRC Press, Newyork, 2003
- 2. Lasers and Current Optical Techniques in Biology, Royal Society of Chemistry, 2004.

19BM2003	<b>BIOMETRIC SYSTEMS</b>	L	Т	Р	С
1901/12005	DIOWE I KIC STSTEWIS	3	0	0	3

- 1. Understand the basic concepts of fingerprint, iris, face and speech recognition.
- 2. Study the general principles of design of biometric systems and the underlying trade-offs
- 3. Introduce the knowledge on personal privacy and security implications of biometrics based identification technology and the issues realized

## **Course Outcomes:**

The Student will be able to

- 1. Infer the technologies of fingerprint, iris, face and speech recognition.
- 2. Expertise in the general principles of design of biometric systems and the underlying trade-offs.
- 3. Priorities the work on identification and recognition depends on physiological and behavioral characteristics
- 4. Identifying the interfacing technologies for real time biometric applications
- 5. Inculcate knowledge on personal privacy and security implications of Biometrics based identification technology and the issues involved.
- 6. Discuss the Biometric applications in the field of medicine

## Module 1: Biometric Fundamentals( 8 hrs)

Biometrics versus traditional techniques – Characteristics - Key biometric processes -Verification – Image processing/pattern recognition- filtering- edge detection- smoothening- enhancement- Biometric matching - Performance measures in biometric systems - Assessing the privacy risks of biometrics.

## Module 2: Image processing fundamentals( 8 hrs)

Convolution- linear/non-linear filtering- Special filters- enhancement filter- edge detection- Laplacianunsharp masking- high boot filtering- sharpening special filtering- thresholding- localization- Robert's method- Sobal's method- Canny edge detection- Positive/negative identification- Biometric system security-Authentication protocols- Authentication methods.

## Module 3: Physiological Biometrics Characteristics(7 hrs)

Facial scan - Ear scan, Retina scan - Iris scan - Finger scan - automated fingerprint identification system - Palm print - Hand vascular geometry analysis - DNA - Dental.

## Module 4: Behavioral Biometrics Characteristic(7 hrs)

Signature scan - Keystroke scan - Voice scan, Gait recognition - Gesture recognition - Video face - mapping the body technology.

## Module 5: Biometric Interfaces( 7 hrs)

Human machine interface - BHMI structure, Human side interface: Iris image interface - Hand geometry and fingerprint sensor - Machine side interface - Parallel port - Serial port - Network topologies.

## Module 6: Biometric Applications( 8 hrs)

Categorizing biometric applications, Application areas: Criminal and citizen identification – Surveillance - PC/network access - E-commerce and retail/ATM - Costs to deploy - Issues in deployment - Biometrics in medicine - cancellable biometrics.

## **Text Books:**

## NUCLEAR MEDICINE

L	Т	Р	С
3	0	0	3

## **Course Objectives:**

- 1. Understand the construction and principle of operation of various nuclear medicine instruments.
- 2. Know some knowledge about the characteristics and mechanisms of radio pharmaceuticals
- 3. Study the diagnostics and therapeutic applications of nuclear medicine and radiation safety procedures and regulations.

## **Course Outcomes:**

The Student will be able to

- 1. Acquire knowledge about radiation activity in the living cells.
- 2. Identify the key principles of nuclear medicine and radioactivity.
- 3. Analyze the working principle of advanced nuclear medicine imaging systems.
- 4. Interpret the effects of ionizing and non-ionizing radiations
- 5. Analyze the effect of microwave on human organs and systems.
- 6. Suggest suitable therapeutic radiation for diseases without any side effects.

## Module 1: Basics of Nuclear Medicine( 8 hrs)

Radioactivity and interaction of radiation; Alpha, Beta and gamma emission, Laws of radioactive decay, Mechanisms of radioactive delay, Radiation intensity and exposure, Decay schemes and energy levels, Compton scattering, Pair productions, Particle interactions

## Module 2: Radiopharmaceuticals( 8 hrs)

Radionuclide production, 99Mo/99mTc generator, Mechanism of localization, Types of radiopharmaceuticals, characteristics of radio pharmaceuticals, Radiopharmaceuticals for diagnosis and treatments in human, Dispensing of radio pharmaceuticals, RIA radiopharmaceuticals and kits production.

## Module 3: Nuclear Medicine Instrumentation(7 hrs)

Construction and principle operation of Gamma camera, Rectilinear scanner, Basic principles of pulse height analyser, Radiation detectors-Ionization chamber, Geiger Muller counter, Semiconductor detectors, Scintillation detectors, Electronic Instrumentation for radiation detection system,

## Module 4 : Diagnostic Applications of Radionuclide( 7 hrs)

PET-CT, Single photon emission computed tomography (SPECT), Radio iodine therapy for Thyrotoxicosis, Differentiated thyroid cancers, Palliative treatment for bone metastasis - 32P and 89 Strontium Dosage,

## Module 5: Therapeutic Applications of Radionuclide(7 hrs)

Intravascular particulate radio nuclide Therapy, Receptor targeted therapy, 131I- MIBG Therapy, Targeted internal radiation in HCC: 90 Y, Radio-synovectomy using Yttrium

## Module 6 : Radiation Safety( 8 hrs)

Radiation protection indifferent nuclear isotope therapy procedures, Management of radiation accidents, Radiation effect on pregnancy and fertility, Diagnosis, evaluation and treatment of radiation overexposure, Instruments used in radiation survey & monitoring, Handling of radioactive patients, Role of national and international bodies in radiation safety, ICRP recommendations, BARC regulations regarding limits of radiation exposure

## 19BM2005

## ANALYTICAL INSTRUMENTATION

L

3

## Course Objectives:

- 1. Understand the working of an instrument for a particular analysis with its merits, demerits and limitations.
- 2. Learn specific technique employed for monitoring different pollutants in air and water.
- 3. Know the instruments used in hospital for routine clinical analysis, drug and pharmaceutical laboratories, oil refineries and above all for environmental pollution monitoring.

## **Course Outcomes:**

The Student will be able to

- 1. Identify various techniques and methods of analysis which occur in the various regions of the spectrum.
- 2. Summarize the unique methods of separation of closely similar materials, the most powerful being gas chromatography.
- 3. Outline the important analytical methods of industrial gases and pollution monitoring instruments.
- 4. Discuss the principle involved in pH and dissolved component analyzers.
- 5. Illustrate the methods of electromagnetic resonance
- 6. Investigate the structures using microscopic methods of analysis.

## Module 1: Colorimetry And Spectrophotometry( 8 hrs)

Special methods of analysis – Beer-Lambert law – Colorimeters – UV-Visible spectrophotometers – Single and double beam instruments – Sources and detectors – IR Spectrophotometers – Types – Attenuated total reflectance flame photometers – Atomic absorption spectrophotometers – Sources and detectors – FTIR spectrophotometers – Flame emission photometers – Fluorescence spectrophotometer

## Module 2 :Chromatography( 7 hrs)

Different techniques – Gas chromatography – Detectors – Liquid chromatographs – Applications – Highpressure liquid chromatographs – Applications.

## Module3:Gas Analyzers And Pollution Monitoring Instruments: (7 hrs)

Types of gas analyzers – Oxygen, NO2 and H2S types, IR analyzers, thermal conductivity analyzers, analysis based on ionization of gases. Air pollution due to carbon monoxide, hydrocarbons, nitrogen oxides, sulphur dioxide estimation - Dust and smoke measurements.

Module 4 : pH Meters and Dissolved Component Analyzers (8 hrs)

Principle of pH measurement, glass electrodes, hydrogen electrodes, reference electrodes, selective ion electrodes, ammonia electrodes, cyclic voltametry, biosensors, dissolved oxygen analyzer – Sodium analyzer – Silicon analyzer.

## Module 5:Electro Magnetic Resonance: (7 hrs)

NMR – Basic principles – NMR spectrometer - Applications. Electron Spin Resonance spectroscopy– Basic principles, Instrumentation and applications.

## Module 6: Microscopic Techniques ( 8 hrs)

Scanning Electron Microscope (SEM), - Basic principles, Instrumentation and applications. Transmission Electron Microscope (TEM) – Basic principles – Instrumentation and applications. Mass spectrometers – Different types – Applications.

## **Text Books:**

# 19BM2006GRAPHICAL SYSTEM DESIGN FOR BIOMEDICALLTPCENGINEERS3003

## Course Objectives:

- 1. Study the basics of Programming Techniques
- 2. Learn the data acquisition and control of a device by interfacing to a computer.
- 3. Design virtual instruments for various biomedical measurements and applications.

## **Course Outcomes:**

The Student will be able to

- 1. Understand the basics of LabVIEW programming
- 2. Interface with real time signals
- 3. Analyzing the application of VIs in medical instrumentation in developing medical instruments
- 4. Interpret the concepts of data communication and synchronization
- 5. Perform signal processing operations using virtual instrumentation
- 6. Apply virtual instrumentation for biomedical applications

## Module 1 :LabVIEW Programming Principles & Environment( 8 hrs)

Data flow – Definition, and importance of data flow in LabVIEW – Identify programming practices that enforce data flow in block diagram, Virtual instrumentation (VI), and sub-VIs - Identify programming practices that break data flow – Polymorphism - Define polymorphism - Identify benefits of polymorphism - Determine output or intermediate values of data elements in VI that utilizes polymorphic inputs LabVIEW Environment -Front panel window, block diagram, and connector pane - Identify which types of VIs do not have a block diagram - Identify the purpose of the connector pane and icon – Palettes

## Module 2 : Software Constructs & Programming Functions: (8 hrs)

Front panel window and block diagram objects - Controls, indicators, IO controls, and refnums - Property Nodes - Data types and data structures - Working with objects and data types on front panel windows – Program control structures and data storage - Flat and Stacked sequence structures - Event structures-Formula Node - Arrays and clusters

## Module 3 : Data Communication & Synchronization : (7 hrs)

Local, global, and shared variables – Data Socket - TCP and UDP – Synchronization – Notifiers – Queues - VI Server - configuring the VI Server - Error handling VIs and functions - Debugging tools and techniques.

## Module 4 : Virtual Instrumentation (Vi) Design & SubVI Design Techniques (8 hrs)

Simple state machine - User interface event handler - Queued message handler - Producer/consumer (data) and producer/consumer (events) - Functional global variables - Connector panes and connection types - Polymorphic subVIs - Options related to subVIs - Error handling – User interface design and block diagram layout - Modular and hierarchical design - SubVI icons and connector pane layout (standard) - VI properties - Documenting Vis

## Module 5 : Memory, Performance And Determinism (8 hrs)

Tools for identifying memory and performance issues - Profile memory and performance - Show buffer allocations- VI metrics - Programming practices - Enforcing dataflow -User interface updates and response to user interface controls - Data type selection, coercion, and buffer allocation - Array, string, and loop operations -Local and global variables, Property Nodes.

## Module 6: Applications( 6 hrs)

Applications of LabVIEW in displaying and monitoring vital parameters, Biomedical signal processing, controlling assistive devices.

## **Text Books:**

- 1. S. Sumathi, P.Surekha, "LabVIEW based Advanced Instrumentation Systems", Springer 2007.

19BM2007	<b>BIO-MEMS TECHNOLOGY</b>	L	Т	Р	С
19BN12007	BIO-MEMIS TECHNOLOGY	3	0	0	3

## **Course Objectives:**

- 1. Introduce the concepts of micro electromechanical systems in medical use
- 2. Learn the materials used and the micro manufacturing of devices
- 3. Apply Microsystems and their applications in medical field

## **Course Outcomes:**

The Student will be able to

- 1. Identify the principles of sensors and actuators
- 2. Summarize the optical devices and applications
- 3. Classify the performance of microfluidic devices to the environment
- 4. Use the software tools for designing and analyzing the sensors
- 5. Recommend the suitable principles of testing for biomedical conditions
- 6. Create simple systems for medical applications

## Module 1 : MEMS In Healthcare( 8 hrs)

MEMS and Microsystems- Introduction - Typical MEMS and Microsystem Products - Application of Microsystem in Healthcare Industry – Working Principles of Microsystems Micro-sensors – Micro-actuation -MEMS with Micro actuation– Micro accelerators.

## Module 2 : Fundamentals of MOEMS( 7 hrs)

Micro-Opto Electromechanical Systems: Fundamental principle of MOEMS Technology, Advantages - Light Modulators, Beam splitter – Micro-lens, Micro-mirrors - Digital Micro-mirror Device, Grating Light Valve, Optical Switch, Waveguide and Tuning

## Module 3 : Microfluidic Systems( 8 hrs)

Microfluidics- Introduction and Fluid Properties, Applications of MFS- Fluid Actuation Methods-Electrophoresis, Dielectrophoresis, Electrowetting, Optoelectrowetting, Electroosmosis Flow, Electrothermal Flow, Thermocapillary Effect- Microfluidic Channel- Microdispenser- Microneedle- Microfilter.

## Module 4:BioMEMS( 7hrs)

Introduction to BioMEMS, BioMEMS for Clinical Monitoring, Lab on a chip, DNA Sensors, E-Nose, E-Tongue. Microsystem approaches to PCR, MEMS based Implantable Drug Delivery System, Emerging BioMEMS Technology.

## Module 5:Micromachining(7 hrs)

Micro system technology-photolithography-X-ray lithography-etching-deposition-Material properties-Thin film process-Clean room-Laser deposition-Thin film diode-transistor- FET-ISFET. Software tools for design, analysis and testing.

## Module 6 : Testing Tools and Techniques( 8 hrs)

Introduction to nanoscale phenomena, Nanoparticles- Nanomaterial characterization – XRD, TEM, SEM, Scanning Tunneling microscopy, AFM, Biomolecular sensing for cancer diagnostics using carbon nanotubes, Carbon nanotube biosensors, Magnetic nanoparticles for MR Imaging, Nano-devices in biomedical applications.

MACHINE LEARNING AND ARTIFICIAL	
INTELLIGENCE	

L	Т	Р	С
3	0	0	3

19BM2008

- 1. Learn the concept of machine learning.
- 2. Explore supervised and unsupervised learning paradigms towards applications
- 3. Understand the various concepts of artificial intelligence

## **Course Outcomes:**

## The Student will be able to

- 1. Describe features that can be used for a particular machine learning approach
- 2. Classify contrast pros and cons of various machine learning techniques
- 3. Infer various machine learning approaches and paradigms.
- 4. Interpret various neural networks and fuzzy logic methods
- 5. Illustrate the fuzzy logic concepts using examples
- 6. Interrelate genetic algorithm concepts for the given problem

## Module 1: Introduction to Machine Learning( 8 hrs)

Learning – Types of Machine Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Concept Learning Task – Finding a Maximally Specific

 $Hypothesis-Version\ Spaces\ and\ the\ Candidate\ Elimination\ Algorithm-Linear\ Discriminants$ 

## Module 2 : Supervised and Unsupervised Learning (8 hrs)

Learning with Trees – Decision Trees – Constructing Decision Trees – Classification and Regression Trees – Nearest Neighbor Methods – Naive Bayes Linear models: Linear Regression, Logistic Regression – Data Clustering Algorithms – K means Algorithms – Fuzzy C means clustering – mountain clustering – subtractive clustering

## Module 3 : Introduction to Artificial Neural Networks (8 hrs)

Characteristics- learning methods – taxonomy – Evolution of neural networks- McCulloch-Pitts neuron - linear separability - Hebb network - supervised learning network: perceptron networks - adaptive linear neuron, multiple adaptive linear neuron

## Module 4: Types of Neural Network( 7 hrs)

BPN, associative memory network: auto-associative memory network, hetero-associative memory network, BAM, Hopfield networks, Kohonen self-organizing, ART network. Case studies on biomedical applications **Module 5:Fuzzy Logic( 7 hrs)** 

Classical set Vs Fuzzy set – Operation and Properties –Fuzzy Relations – Fuzzy Logic control – Fuzzification, Membership functions- Defuzzification, Rule Based System, and Applications.

## Module 6: Genetic Algorithm( 7 hrs)

Genetic algorithm and search space - general genetic algorithm, operators in GA - genetic programming – multilevel optimization – advances in GA

## **Text Books:**

## TELEMEDICINE

## L T P C 3 0 0 3

## **Course Objectives:**

- 1. Introduce the key principles of telemedicine and health.
- 2. Understand telemedical technology.
- 3. Learn telemedical standards and its application.

## **Course Outcomes:**

The Student will be able to

- 1. Understand the concepts of Telemedicine
- 2. Interpret the legal aspects of Telemedicine
- 3. Illustrate multimedia technologies in telemedicine.
- 4. Use protocols behind encryption techniques for secure transmission of data.
- 5. Explain the data acquisition and the data storage devices
- 6. Apply telehealth in healthcare

## Module 1 : Introduction to Telemedicine (7 hrs)

History and Evolution of telemedicine, Functional diagram of telemedicine system, Essential Parameters for Telemedicine, Delivery Modes in Telemedicine , Benefits and Limitations of Telemedicine.

## Module 2 : Ethical , Security And Legal Aspects of Telemedicine( 8 hrs)

Confidentiality, patient rights and consent: confidentiality and the law, the patient-doctor relationship, access to medical records, consent treatment - data protection & security, jurisdictional issues, intellectual property rights, Security in Telemedicine systems – Access control, Fire wall, Encryption, Authentication, Digital certificate, Digital Timestamp

## Module 3 :Telemedical Technology( 8 hrs)

Principles of Multimedia - Text, Audio, Video, data, PSTN, POTS, ANT, ISDN, Internet, Wireless Communication - GSM satellite, and Micro wave, Modulation techniques, Types of Antenna, Satellite communication, Mobile hand-held devices and mobile communication. Internet technology and telemedicine using worldwide, Video and audio conferencing

## Module 4: Data Acquisition And Storage System (7 hrs)

Acquisition System – Camera, Scanners, Display Systems – Analogue Devices, LCD, Laser Displays, Holographic Representation, Virtual Screen devices, Storage System – Magnetic System, Optical System, Solid State Disk

## Module 5: Data Security and Standards( 8 hrs)

Encryption, Cryptography, Mechanisms of encryption, phases of Encryption, Protocols: TCP/IP, ISO-OSI, Standards to followed DICOM, HL7, H. 320 series (Video phone based ISBN) T. 120, H.324 (Video phone based PSTN)

## Module 6:Applications( 7 hrs)

 $Telemedicine\ access to\ health\ care\ services\ -\ health\ education\ and\ self-care. \cdot\ Introduction\ to\ robotics\ surgery,\ Telesurgery.\ Teleradiology,\ Telepathology$ 

## **Text Books:**

- 1. Olga Ferrer Roca, M.SosaIudicissa, "Hand book of Telemedicine", IOS press, 2002.
- 2. Norris.A.C, "Essentials of Telemedicine and Telecare", John Sons & Ltd, 2002.

## 19BM2010

## **BIOMATERIALS AND ARTIFICIAL ORGANS**

L

3

## **Course Objectives:**

- 1. Learn and understand the Concepts, Classification and Properties, and Structural variations in biomaterials.
- 2. Understand the testing of implants and cell-interfacing materials.
- 3. Know the applications of biomaterials in Artificial Organs and their development.

## Course Outcomes:

The Student will be able to

- 1. Identify and know the structural variations in biomaterials.
- 2. Determine and classify the various properties of biomaterials.
- 3. Explain the methods for testing implants with different aspects of biomaterials
- 4. Recall the cell-biomaterial interactions for constructing artificial organs.
- 5. Remember the Interfacing materials and ethical implications.
- 6. Apply the biomaterials in the healthcare sectors.

## Module 1: Structural Variations in Biomaterial(8 hrs)

Definition, classification and properties of bio-materials, Surface, bulk, mechanical and biological. Types of biomaterials; Biological response to biomaterials; Crystal structure of metals; Crystal structure of ceramics; Carbon based materials; General structure of polymers; Synthesis of polymers. Bending properties; Time dependent properties – creep properties of polymers; Influence of porosity and the degradation of mechanical properties; Introduction to fatigue.

## Module 2: Properties of Biomaterials( 8 hrs)

Wound-healing and blood compatibility. Surface modification of biomaterials – plasma treatment, radiation grafting, self-assembled monolayers (SAMs), Langmuir – Blogett films and covalent biological coatings; Protein properties that affect biomaterial surface interaction; biomaterial surface interaction that affect interactions with proteins; Protein adsorption kinetics; DLVO model for cell adhesion; Assays to determine the effects of cell-material interactions – agar diffusion assay, adhesion assays and migration assays.

## Module 3: Biocompatibility( 8 hrs)

Biocompatibility–Toxicology, Biocompatibility, Mechanical and Performance Requirements, Regulation. Biomaterials associated infection. Cytocompatibility evaluation laboratory, Tissue compatibility evaluation laboratory, Hemocompatibility evaluation laboratory, Sterility evaluation laboratory, Histopathology evaluation laboratory, Physiochemical evaluation laboratory.

## Module 4:Implantation (7 hrs)

In vitro assays for inflammatory response due to biomaterial implantation; Fibrous encapsulation of healing process; Ideal features of soft tissue implants; Metallic Implant materials, Polymeric Implant materials, Tissue replacement materials-soft, hard and blood interfacing materials.

## Module 5: Oxygenators & Audiometer (7 hrs)

Heart, heart valves, oxygenators - bubble, film oxygenators and membrane oxygenators. Gas flow rate and area for membrane oxygenators - Anatomy & Physiology of EAR-air conduction, bone conduction, masking, functional diagram of an audiometer.

## Module 6: Dialysers & Lung Devices(7 hrs)

Dialysers - Haemodialysis: flat plate type, coil type and hollow fiber. Haemodialysis Machine, Portable kidney machine - Brief of lungs gaseous exchange / transport, artificial heart - Lung devices.

## **Text Books:**

- 1. John B.Park Joseph D. Bronzino, "Biomaterials Principles and Applications" CRC Press, 4th edition, 2003.

19BM2011	

## PATIENT AND DEVICE SAFETY

## **Course Objectives:**

- 1. Provide a source of useful ideas, concepts, and techniques that could be selectively applied to reduce an intolerable rate of unacceptable errors, mistakes, goofs, or short comings in expected Medical Device performance.
- 2. Understand the principle of safety and risk management for avoiding patient injury.
- 3. Study the various Medical Devices Standards, Regulations.

## **Course Outcomes:**

The Student will be able to

- 1. Identify the mechanical and electrical safety standards of medical equipment
- 2. Understand device specific safety goals
- 3. Interpret reasonable, acceptable and effective remedies.
- 4. Access the clinical suitability to under the impact of the device on the environment
- 5. Device more reliable medical equipment incorporating safety goals
- 6. Suggest new techniques for device management

## Module 1: Basics of Reliability and Concept of Failure(8 hrs)

Reliability and Safety Testing: Reliability – Types of reliability – Reliability optimization & assurance – Reliability's effect on medical devices – The concept of failure – Causes of failure – Types of Failures in Medical devices – Safety testing – Device specific safety goals

## Module 2 : Safety and Risk Management (8 hrs)

Failure assessment and Documentation – Visual inspection: External & Internal visual inspection – Measurement – Safety parameters, Function test - Risk Management: Safety and risk management – Risk, Deciding on acceptable risk, Factors important to medical device risk assessment – Risk management – Tools for risk estimation – Liability – Manufacturer's and physician's responsibilities

## Module 3 : Environmental & Ecological Safety (7 hrs)

Devices Handling, Environmental & Ecological Safety: Safe medical devices – Handling and operation – Medical Application safety – Usability – Clinical assessment – Environmental safety – Interference with the environment – Environmental conditions, Impact on the environment – Ecological safety

## Module 4 : Mechanical and Electrical Safety (7 hrs)

Mechanical and Electrical Safety: Safety Mechanics – Electrical Safety – Biological aspect – Limitation of Voltages - Macroshock and Microshock – Earth and Protection – Leakage currents – Magnetic fields and compatibility – Basic assumptions in safety technology – Safety classes

## Module 5 : Medical Devices Standards, Regulations( 8 hrs)

Medical Standards and Regulations – Device classification – Registration and listing – Declaration of conformance to a recognized standard – Investigational Device Exemptions (IDEs) – Institutional Review Boards (IRBs) – IDE format – Good laboratory practices (GLPs) – Good manufacturing practices (GMPs) – Human factors – Design control

## Module 6 : Medical Devices Directives (7 hrs)

The Medical Devices Directives (MDD) – Definition, Process and choosing the appropriate directive – Active Implantable Medical Devices Directive (AIMDD) – In Vitro Diagnostic Medical Devices Directive (IVDMDD).

## **Text Books:**

## 19BM2012

## **ROBOTS IN HEALTHCARE**

L	Т	Р	С
3	0	0	3

## **Course Objectives:**

- 1. Understand the basic concepts of robots and types of robots, manipulators, actuators and grippers.
- 2. Study about various types of sensors and power sources
- 3. Study the various applications of robot in the medical field.

## **Course Outcomes::**

## The Student will be able to

- 1. Identify the concepts of robotics, motion, joints
- 2. Summarize the principles of sensors and actuators for robots
- 3. Use the software tools for designing and analyzing the robot motion
- 4. Classify the performance to various sensors to its environment
- 5. Recommend the suitable principles for specific conditions
- 6. Create simple robots for surgical applications

## Module 1 : Introduction of Robotics : (8 hrs)

Introduction to Robotics and its history, Overview of robot subsystems, Degrees of freedom, configurations and concept of workspace, Automation, Mechanisms and movements, Dynamic stabilization- Applications of robotics in medicine

## Module 2 : Actuators and Grippers : (8 hrs)

Pneumatic and hydraulic actuators, Stepper motor control circuits, End effectors, Various types of Grippers, Design consideration in vacuum and other methods of gripping, PD and PID feedback actuator models,

## Module 3: Manipulators: (7 hrs)

Construction of Manipulators, Manipulator Dynamic and Force Control, Electronic and pneumatic manipulator

## Module 4: Basic Kinematics: (6 hrs)

Forward Kinematic Problems, Inverse Kinematic Problems, Solutions of Inverse Kinematic problems

## Module 5 : Power Sources and Sensors : (8 hrs)

Sensors and controllers, Internal and external sensors, position, velocity and acceleration sensors, Proximity sensors, force sensors, laser range finder, variable speed arrangements, Path determination - Machinery vision, Ranging - Laser- Acoustic, Magnetic fiber optic and Tactile sensor

## Module 6: Robotics In Medicine: (8 hrs)

Da Vinci Surgical System, Image guided robotic systems for focal ultrasound based surgical applications, System concept for robotic Tele-surgical system for off-pump CABG surgery, Urologic applications, Cardiac surgery, Neuro-surgery, Pediatric-, and General- Surgery, Gynecologic Surgery, General Surgery and Nano robotics.

19BM2013	RADIOLOGICAL IMAGING TECHNIQUES	L	Т	Р	С	
19DN12015	RADIOLOGICAL INIAGING TECHNIQUES	3	0	0	3	

- 1. Study the quality assurance test for radiography, method of recording sectional images
- 2. Study the functioning of radio isotopic imaging equipment.
- 3. Study the MRI, image acquisition and reconstruction

## Course Outcomes::

## The Student will be able to

- 1. List out the various medical imaging techniques.
- 2. Explain the principle of specific medical imaging techniques.
- 3. Interpret the imaging outputs.
- 4. Identify the suitable medical imaging techniques for specific pathology.
- 5. Devise new ideas to solve certain issues in medical imaging.
- 6. Justify the impact of medical imaging system for diagnosis.

## Module 1 : X-Ray and CT Imaging : (8 hrs)

Principles and production of soft X-rays and hard X-rays- Details of radiographic and fluoroscopic images in X-Ray systems- Screen-film and image intensifier systems - Evolution of CT machines - CT image formation-Conversion of X-ray data into scan image, Mathematical details of various algorithms- spiral CT, Transverse tomography- CT Angiography

## Module 2 : PET and SPECT Imaging : (8 hrs)

Introduction to emission tomography, basic physics of radioisotope imaging Compton cameras for nuclear imaging, PET scanner principles, SPECT, Computer techniques in fast acquisition Analytic image reconstruction techniques, Attenuation, scatter compensation in SPECT spatial compensation in SPECT.

## Module 3 : Magnetic Resonance Imaging (MRI) : (8 hrs)

Principles of MRI pulse sequence – image acquisition and reconstruction techniques – MRI instrumentation magnetic gradient system RF coils – receiver system functional MRI – MRI artifacts- Various types of pulse sequences for fast acquisition of imaging, NMR spectroscopy - Application of MRI

## Module 4: Ultrasonic Imaging: (7 hrs)

Production of ultrasound – properties and principles of image formation, capture and display – principles of A-mode, B-mode and M-mode display – Doppler ultra sound and color flow mapping – applications of diagnostic ultra sound.

## Module 5:Infra-RedImaging: (6 hrs)

**Physics** of thermography – imaging systems – pyroelectric Videocon camera clinical thermography – liquid crystal thermography.

## Module 6:Other Imaging Techniques: (8 hrs)

Optical coherence tomography (OCT): Introduction and its medical applications - Advances in image resolutions - Speed in Picture Archiving and Communication Systems (PACS) in medical imaging.

## 19BM2014

## BIOMECHANICS

L	Т	Р	С
3	0	0	3

## **Course Objectives:**

- 1. Understand the principles of mechanics that is used to analyze human movement.
- 2. Study the structure and functions of bones, cartilage and of skeletal muscle
- 3. Study the loads applied to skeletal system and fluid mechanics to human body

## Course Outcomes::

## The Student will be able to

- 1. Recognize the concepts of mechanics and kinematics for human movements
- 2. Interpret the human factors that affect the environmental conditions
- 3. Apply the engineering techniques in human physiological applications
- 4. Analyze the properties and functions for effective performance.
- 5. Evaluate the methods, solutions to human problems for specific needs
- 6. Design the advanced system concepts implement solutions to human factors problem.

## Module 1: Fundamentals of Mechanics: (8 hrs)

Newton's law- mechanical behavior of bodies in contact, work, power and energy relationship – Angular kinematics of human movement-measuring angles, angular kinematic relationships –relationships between linear and angular motion.

## Module 2 : Fundamentals of Kinematics : (8 hrs)

Angular kinetics of human movement-resistance to angular acceleration, angular momentum – Equilibrium and human movement-equilibrium, center of gravity, stability and balance – Kinematic concepts for human motion-forms of motion and joint movement terminology – Kinetic concepts for human motion-basic conceptsrelated to kinetics .- mechanical loads on the human body. Instrumentation techniques for muscle and toe strength, Hand grip dynamometer.

## Module 3 : Bone and Cartilage : (7 hrs)

Bone structure & composition, blood circulation in bone – mechanical properties of bone, viscoelastic properties of bone – Maxwell &Voight models – viscoelastic properties of articular cartilage – Anisotropy and composite models for bone –Bone growth and development – Bone response to stress – Osteoporosis – causes, diagnosis, treatment – Elasticity and strength of bone. Bone Implants and materials.

## Module 4 :Bio fluid Mechanics : (7 hrs)

Newtonian viscous fluid, non-viscous fluid – Rheological properties of blood –Structure and composition of blood vessel – Remodeling of blood vessels –Nature of fluids, Propulsion in fluid medium – Mechanical properties of arterioles, capillary vessels and veins – Bio-viscoelastic solids- Measurement techniques.

## Module 5 : Mechanics of Skeletal Muscle : (8 hrs)

Structure of skeletal muscle –muscle fibers, motor units – Structure of skeletal muscle-fiber types, fiber architecture – Sliding element theory of skeletal muscle.-Skeletal muscle function – Contraction of skeletal muscle and hill's three element model – Factors affecting muscular force generation – Muscular strength, power and endurance – Muscle injuries-Pain and gate control theory. Testing methods.

## Module 6 : Mechanics of Shoulder, Spine And Hip : (7 hrs)

Structure of the shoulder – Movements of shoulder complex – Loads on the shoulder – Structure of the spine – Movements of the spine – Muscles and loads on the spine – Structure and movements of the hip – Loads on the hip-Gait analysis and biomedical Applications.

19BM2015	MEDICAL ETHICS AND STANDARDS	L	Т	Р	С	
19BW12015	WIEDICAL ETHICS AND STANDARDS	3	0	0	3	

- 1. Achieve familiarity with some basic ethical framework& understand how these ethical frameworks can help us to think through contemporary questions in medical ethics.
- 2. Know about the legal and ethical principles and application of these principles in health care settings
- 3. Gain knowledge about the medical standards that to be followed in hospitals.

## **Course Outcomes:**

## The Student will be able to

- 1. Identify the scope of medical ethics
- 2. Illustrate the concepts of ethical theories and moral principles for the health professions
- 3. Explain the purpose of medical standards
- 4. Acquire knowledge about hospital accreditation standards
- 5. Summarize the importance of hospital safety standards
- 6. Recommend the suitable principles of medical equipment safety standards in hospitals

## Module 1: Introduction to Medical Ethics: (8 hrs)

Definition of Medical ethics, Scope of ethics in medicine, American medical Association code of ethics, CMA code of ethics- Fundamental Responsibilities, The Doctor and the Patient, The Doctor and the Profession, Professional Independence, The Doctor and Society.

## Module 2: Ethical Theories and Moral Principles: (8 hrs)

Theories-Deontology & Utilitarianism, Casuist theory, Virtue theory, The Right Theory. Principles Non-Maleficence, Beneficence, Autonomy, Veracity, Justice. Autonomy & Confidentiality issues in medical practice, Ethical Issues in biomedical research, Bioethical issues in Human Genetics & Reproductive Medicine

## Module 3: Medical Standards: (8 hrs)

Evolution of Medical Standards – IEEE 11073 - HL7 – DICOM – IRMA - LOINC – HIPPA –Electronics Patient Records – Healthcare Standard Organizations – JCAHO (Join Commission on Accreditation of Healthcare Organization) - JCIA (Joint Commission International Accreditation) - Evidence Based Medicine - Bioethics.

## Module 4: Hospital Accreditation Standards: (6 hrs)

Accreditation - JCI Accreditation & its Policies. Patient centered standards, Healthcare Organization management standards -Indian Perspective.

## Module 5 : Hospital Safety Standards : (8 hrs)

Life Safety Standards- Protecting Occupants, Protecting the Hospital From Fire, Smoke, and Heat, Protecting Individuals From Fire and Smoke, Providing and Maintaining Fire Alarm Systems, Systems for Extinguishing Fires Environment of Care Standards-Minimizing EC Risks, Smoking Prohibitions, Managing Hazardous Material and Waste, Maintaining Fire Safety Equipment, Features, Testing, Maintaining, and Inspecting Medical Equipment.

## Module 6: Medical Equipment Safety Standards: (7 hrs)

General requirements for basic safety & essential performance of medical equipment. IEC 60601standards-Base Standard-general requirement of electrical medical devices, Collateral Standards EMC radiation protection & programmable medical device system, Particular Standards-type of medical device

SIGNALS AND	SYSTEMS FOR	BIOMEDICAL
	ENGINEERS	

#### L T P C 3 0 0 3

## **Course Objectives:**

19BM2016

- 1. Know the basic concepts of bio signals and its importance.
- 2. Learn about the time and frequency domain techniques.
- 3. Understand the analysis of bio signals.

## **Course Outcomes:**

At the end of the course, students will be able to

- 1. Identify the nature of biomedical signals.
- 2. Analyze the spectral characteristics of continuous-time periodic and aperiodic signals using Fourier analysis.
- 3. Classify systems based on their properties and determine the response of LTI system using Laplace transform.
- 4. Apply Laplace transform and Z- transform to analyze continuous-time and discrete-time signals and systems.
- 5. Analyze system properties based on impulse response by FIR, IIR filtering techniques.
- 6. Demonstrate mathematical tools in characterization of physiological system.

## Module 1: Introduction to Signals (7 Hours)

Basics of Biomedical Signals and systems- representation –Sampling and quantization-Periodic, aperiodic and transient ,stationary and non- stationary signals. Two- dimensional signals-Images. Linear and Non Linear systems-Linear System theory- Stability of systems.

## Module 2: Fourier Transform: (8 Hours)

Time and frequency -domain signal representatives, Fourier series analysis, Symmetry, Frequency and Complex representation, The continuous Fourier transform, The discrete Fourier series and discrete Fourier transform, The Fourier transform and power spectrum: Implications and applications. Spectral averaging, Stationarity and time-frequency Analysis.

## Module 3: Joint Time-Frequency Analysis of Biomedical Signals (8 Hours)

The Short- Term Fourier Transform. The Gaborand Adaptive Gabor Transforms, The Wigner-Ville and Pseudo-Wigner Transforms, Cohen's General Class of JTF Distributions JTFA Using Wavelets, Applications of JTFA to Physiological Signals.

## Module 4: Linear Systems is the Frequency Domain (8 Hours)

The transfer function. The response of system elements to sinusoidal inputs-phasor analysis. The transfer function spectral plots. Linear systems analysis in the complex frequency domain: The Laplace transform and the Analysis of Transients - The Laplace transform, The inverse Laplace transform, Laplace analysis - the Laplace transfer function, Nonzero initial conditions- initial and final value theorems, The Laplace domain and the frequency domain

## Module 5: Linear Systems In The Time Domain (8 Hours)

Convolution and simulation, Linear system analysis: Applications, Linear filters, filter types, Filter attenuation slopefilter order, Filter initial sharpness, FIR versus IIR filter characteristics, Finite impulse response(FIR) filters, Infinite impulse response filters, The digital transfer function and the Z-transform, The digital transfer function.

## Module 6: Biomedical Signals And Systems Analysis (6 Hours)

Concurrent, coupled and correlated processes, filtering for removal of artifacts, event detection, wave shape and wave form complexity, analysis of non-stationary signals. Mathematical Tools Used in the characterization of Physiological Systems. Complex systems in biology and medicine - properties and examples.

19BM2017	<b>BIOPHYSICS AND BIOCHEMISTRY</b>	L	Т	Р	С	
1701/12017	DIOI II I SICS AND DIOCHEMISTKI	3	0	0	3	

- 1. Understand the basic principles of physics and chemistry in medicine.
- 2. Learn the basic physiological parameters and physical laws governing human body.
- 3. Know the instruments and range of measurement of vital parameters.

## **Course Outcomes:**

- 1. Demonstrate knowledge of the fundamental concepts in physics and chemistry that underlie biological processes.
- 2. Define the structural characteristics of nucleic acids and proteins
- 3. examine parameters that variously determine physiological conditions
- 4. Describe the principles that govern biomolecular interactions
- 5. Study the fundamentals of various biochemical and physical measurements
- 6. Study the determination of vital body parameters for physiological measurements.

## Module 1: Introduction to Biochemistry: (7 Hours)

Cell Structure and cellular constituents and functions, Biomolecules, Functional groups of organic biomolecules, Major classes of biomolecules: amino acids, proteins, peptide bonds, DNA. Components of nucleic acids, base pairing, Watson and crick DNA structure, DNA as the genetic material, DNA replication **Module 2: Amino acids and Proteins: (7 Hours)** 

Ionization of water, weak acids & weak bases, dissociation constants, buffering in biological systems, titration curves of amino acids, Isoelectric point  $1^0$ ,  $2^0$ ,  $3^0$ , structure of proteins and purification techniques of proteins.

## Module 3: Lipids and Carbohydrates: (7 Hours)

Structure and function, Lipids, structural and storage lipids, structural lipids in membrane, phospholipids, glycolipids, lipids as signals, cofactors and pigments, carbohydrates in general: classifications and metabolism.

## Module 4: Thermodynamics of living systems: (8 Hours)

Conservation of energy in living systems, Entropy and Life, Gibbs and Standard free energy, Equilibrium constant, Coupled reactions. Viscosity and biological importance, Surface tension, Factors influencing surface tension, Biological importance

## Module 5: Dynamics of biomolecules: (8 Hours)

Cell membrane and transport, Composition and architecture of cell membrane, Diffusion, Laws of diffusion, Active transport, Facilitated diffusion, Osmosis, Osmotic pressure, Osmoregulation Donnan Potential, Ion selective channels, Voltage gated, molecular mechanism of signal transduction.

## Module 6: Analysis of fluids and metabolic disorders: (8 Hours)

Composition of Blood, serum, Cerebrospinal fluid and urine, Analysis of blood- :Hemoglobin, Total cell and Differential cell (TC/DC) counts, Erythrocyte sedimentation Rate (ESR); Clotting time. Glucose; Lipid profile; Urea; Gases: Oxygen and Carbon dioxide levels; pH, Serum: Proteins, Albumin/Globulin Ratio; Bilirubin; Creatinine; Uric acid; Electrolytes, Urine: Color, odor, sediment, crystals, glucose; protein/albumin.

## HUMAN ANATOMY AND PHYSIOLOGY

L	Т	Р	С	
3	0	0	3	

## **Course Objectives:**

19BM2018

To impart knowledge on

- 1. Basic structural and functional elements of human body.
- 2. Organs and structures involving in system formation and functions.
- 3. Understand all systems in the human body.

## **Course Outcomes:**

The Student will be able to

- 1. Recall the basic elements of human body.
- 2. Compare the major bones and their processes as they relate to each region of the body.
- 3. Interpret the major organs and components of the respiratory system.
- 4. Recognize the major organs and vessels of the cardiovascular system.
- 5. Describe the basic components and functions of urinary and special sensing systems.
- 6. Demonstrate the structure and functions of nervous systems.

## Module 1: Basic Elements of Human Body (9 Hours)

Cell: Structure and organelles - Functions of each component in the cell. Cell membrane – transport across membrane – origin of cell membrane potential – Action potential Tissue: Types – Specialized tissues – functions, Types of glands.

## Module 2: Skeletal and Respiratory System (7 Hours)

Skeletal system: Bone types and functions – Joint - Types of Joint - Cartilage and functions

## Module 3: Respiratory System (7 Hours)

Respiratory System: Components of respiratory system – Respiratory Mechanism. Types of respiration - Oxygen and carbon dioxide transport and acid base regulation.

## Module 4: Circulatory System (8 Hours)

Blood composition - functions of blood – functions of RBC.WBC types and their functions Blood groups – importance of blood groups – identification of blood groups. Blood vessels - Structure of heart – Properties of Cardiac muscle – Conducting system of heart -Cardiac cycle – ECG - Heart sound - Volume and pressure changes and regulation of heart rate –Coronary Circulation. Factors regulating Blood flow.

## Module 5: Urinary and Special Sensory System(7 Hours)

Urinary system: Structure of Kidney and Nephron. Mechanism of Urine formation and acid base regulation – Urinary reflex – Homeostasis and blood pressure regulation by urinary system. Special senses: Eye and Ear.

## Module 6: Nervous System (7 Hours)

Structure of a Neuron – Types of Neuron. Synapses and types. Conduction of action potential in neuron Brain – Divisions of brain lobes - Cortical localizations and functions - EEG. Spinal cord – Tracts of spinal cord - Reflex mechanism – Types of reflex, Autonomic nervous system and its functions.

<b>IZDIVIZUIZ DIUVIEDICAL SENSURS</b>	19BM2019	BIOMEDICAL SENSORS	L	Т	Р	С
	1701/12017	DIOWEDICAL SENSORS	3	0	0	3

## **Course Objectives:**

- 1. To provide introduction to the field of medical sensors and an in depth and quantitative view of device design and performance analysis.
- 2. To provide knowledge on the principle and operation of different medical transducers.
- 3. To introduce the application of sensors and transducers in the physiological parameter measuring system.

## **Course Outcomes:**

The Student will be able to

- 1. Identify the calibration procedure for the basic instruments involved in physiological parameter measurement.
- 2. Interpret the errors in measurement by analyzing the performance characteristics of the sensors.
- 3. Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- 4. Apply the suitable design criteria for developing a medical sensor for a particular application.
- 5. Develop advanced medical sensors based on the basic transduction principles.
- 6. Predict the qualitative performance of advanced medical sensors.

## Module 1: Science of Measurement (8 hrs)

Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Transfer Function – First and Second Order Systems.

## Module 2: Different transduction principles (8 Hours)

Temperature transducers- thermo resistive transducers, thermoelectric, Displacement transducers - potentiometric, resistive strain gauges, inductive displacement, and capacitive displacement transducer. Pressure transducer- indirect method - measurement of blood pressure using sphygmomanometer, piezo-electric type, catheter tip transducers, measurement of intracranial pressure, catheter tip- implantable type. Optical Sensors -

## Module 3: Biological sensors (7 Hours)

Study of Various corpuscles like Pacinian, functions and modelling, Chemoreceptor, hot and cold receptors, baro- receptors, sensors for smell, sound, vision, osmolality and taste.

## Module 4: BioSensors (7 Hours)

Electrolytic sensors, optical sensor, fiber optic sensors. Biosensors in clinical chemistry, medicine and health care.

## Module 5: Bio chemical sensors (7 Hours)

Introduction, Advantages and limitations, various components of Biosensors, Biocatalysts based biosensors, bio-affinity based biosensors & microorganisms based biosensors, Types of membranes used in biosensor constructions.

## Module 6: Bio potential electrodes (8 Hours)

Electrodes Electrolyte Interface, Half Cell Potential, Polarization, Polarizable and Non Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes. Ion exchange membrane electrodes, oxygen electrodes, CO<sub>2</sub> electrodes enzyme electrode, ISFET for glucose, urea.

## **Text Books:**

- 4. Biomedical Transducers and Instruments, Tatsuo Togawa, ToshiyoTamma and P. Akeoberg.

19BM2020	SIGNAL CONDITIONING CIRCUITS	L	Т	Р	С	
19DIv12020	SIGNAL CONDITIONING CIRCUITS	3	0	0	3	

## **Course Objectives:**

To impart knowledge on

- 1. Bioelectric amplifiers
- 2. Filters and circuits
- 3. Application of signal conditioning in biomedical field

## **Course Outcomes:**

## The Student will be able to

- 1. Identify the origin and characteristics of various biosignals and its acquisition.
- 2. Apply the signal conditioning circuits for biomedical field.

- 3. Analyze and deign bio filters and isolation circuits used in medical signal conditioning.
- 4. Interface the bioelectric signals with analog and digital circuits for data acquisition
- 5. Create the various circuits for designing medical equipments using different ICs
- 6. Recommend the various safety standards in biomedical instrumentation

## Module 1: Biopotential Measurement (6 Hours)

Biopotentials and bioelectric currents, Nature of Bio Electricity: Bioelectric Currents, Nernst Potential, Diffusion Potential, Action potential, Detection of Bio electric events, bio-electrode and electrode-skin interface, Need for bioamplifiers and biosignal Conditioning.

Module 2: Operational Amplifiers and Its Biomedical Applications (8 Hours)

Operational Amplifiers Basic opamps parameters, Ideal and practical opamp, application of opamp in biomedicine- Adder, subtractor, analog integrator, differentiator, preamplifiers, Transimpedence circuits.

## Module 3: Basic Filters and Isolation Circuits (8 Hours)

Active filters and Medical Isolation Amplifiers: First order and second order active filters, Instrumentation amplifier, Types of isolation amplifiers and optocouplers.

## Module 4: Biosignal Data Acquisition Systems (8 Hours)

Comparators, Comparator applications, Multivibrators, 555 timers, Astable and monostable, Pacemaker circuits, Aliasing and sampling, Analog to Digital, Digital to Analog conversion.

## Module 5: Special Analog Circuits (8 Hours)

Special analog circuits and systems used in biomedical transmission, Phase Detectors-Analog and Digital, Voltage Controlled Oscillators, Various VCO ICS, Phase locked loops.

## Module 6: Advanced Biomedical Instrumentation and Safety Standards (7 Hours)

Modulation and demodulation of biosignals, IC thermometers and advanced biomedical instrumentation systems, Electrical Interface problems and Safety Standards in Bio Potential Measurements.

## **Text Books:**

## SIGNALS CONDITIONING CIRCUITS LABORATORY

Course Objectives:

To impart knowledge on

- 1. Design of filters and amplifier circuits for bioelectric amplifiers.
- 2. Different preamplifiers used for amplifying the bio signals.
- 3. Application of signal conditioning in biomedical field.

## **Course Outcomes:**

The Student will be able to

- 1. Summaries the principles of various digital ICs
- 2. Identify and apply the amplifiers and various signal conditioning circuits for biosignals acquisition.
- 3. Demonstrate the basic concepts for filtering of bio signals
- 4. Design and build various analog and digital interfaces for signal conversion
- 5. Select suitable circuits to design various biomedical devices
- 6. Apply and analyze the front end analogue circuit design for ECG, EMG, EEG, etc.

## List of Experiments

- 1. Study of basic digital logic used in biosignal conditioning
- 2. Study of different data storage flip-flops used in medical hardware's
- 3. Study of different data storage flip-flops used in medical hardware's

- 4. Design of basic op-amp circuits for biosignal processing
- 5. Design of waveshaping circuits
- 6. Instrumentation amplifier for ECG amplification
- 7. Design of constant current source and transimpedence circuits.
- 8. Design of preampilifer circuit
- 9. Design of medical isolation amplifier
- 10. Biosignal data acquisition system
- 11. Design of pacemaker circuit
- 12. Design of active filters for biosignal acquisition (PPG Signal Acquisition)

19BM2022	CONTROL SYSTEM FOR BIOMEDICAL ENGINEERS	L	Т	Р	С
19DW12022	CONTROL SISTEM FOR DIOMEDICAL ENGINEERS	3	0	0	3

# **Course Objectives:**

To impart knowledge on

- 1. Bio control systems modeling technique.
- 2. Time response analysis and frequency response analysis.
- 3. Analyze biological control systems.

# **Course Outcomes:**

The Student will be able to

- 1. Represent the system in various forms.
- 2. Interpret the response of the system in time domain.
- 3. Analyze the frequency response of any system
- 4. Examine the stability of the system.
- 5. Compute the mathematical model of physiological systems.
- 6. Summarize the features of physiological system.

# Module 1: Engineering Control Systems (7 Hours)

Basic structure of control system, Positive and Negative Feedback, transfer functions, modeling of electrical systems, block diagram and signal flow graph representation of systems

### Module 2: Time Domain Analysis (8 Hours)

Introduction to simulation, Step response of first order and second order systems, determination of time domain specifications of first and second order systems. Definition of steady state error constants and its computation.

### Module 3: Frequency Domain Analysis (8 Hours)

Frequency response, determination of gain margin and phase margin using Bode plot, use of Nichol's chart to compute resonant frequency and band width.

### Module 4: Stability Analysis (8 Hours)

Definition of stability, Routh-Hurwitz criteria of stability, construction of root locus, Nyquist stability criterion, Nyquist plot and determination of closed loop stability.

### Module 5: Physiological Systems (7 Hours)

Difference between engineering and physiological control systems, generalized system properties, models with combination of system elements. Physiological system modeling, linear model of respiratory mechanics.

### Module 6: Case Studies (7 Hours)

Mathematical Model of chemical regulation of ventilation, linear model of muscle mechanics, model of regulation of cardiac output, model of Neuromuscular reflex motion

### **Text Books:**

IMAGE PROCESSING FOR MEDICAL APPLICATIONS

#### L T P C 3 0 0 3

# **Course Objectives:**

19BM2023

To impart knowledge on

- 1. Digital image fundamentals.
- 2. Low level image processing techniques.
- **3.** Segment, compress and analyze images

# **Course Outcomes:**

The Student will be able to

- 1. Describe the digital image fundamentals for a given condition
- 2. Illustrate the effect of image enhancement techniques on images
- 3. Distinguish between image restoration filters
- 4. Discuss about the image segmentation procedure
- 5. Compute the level of compression achieved for the given image data
- 6. Explain and compute features useful for image representation and recognition

# Module 1: Digital Image Fundamentals (7 Hours)

Introduction – Origin – Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels - color models, Medical imaging applications

# Module 2: Image Enhancement (8 Hours)

Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering – Frequency Domain: Introduction to Fourier Transform – Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters., Application of filtering in medical images.

# Module 3: Image Restoration and Segmentation (8 Hours)

Noise models– Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering, Application of filtering in medical images.

# Module 4: Segmentation (7 Hours)

Detection of Discontinuities–Edge Linking and Boundary detection – Region based segmentation-Morphological processing- erosion and dilation, Application of edge detection.

### Module 5: Wavelets and Image Compression (8 Hours)

Wavelets – Sub band coding - Multiresolution expansions - Compression: Fundamentals – Image Compression models – Error Free Compression – Variable Length Coding – Bit-Plane Coding –Lossless Predictive Coding – Lossy Compression – Lossy Predictive Coding – Compression Standards, Case study **Module 6: Image Representation and Recognition (7 Hours)** 

Boundary representation – Chain Code – Polygonal approximation, signature, boundary segments –Boundary description – Shape number – Fourier Descriptor, moments- Regional Descriptors –Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.

# 19BM2024

#### IMAGE PROCESSING LABORATORY FOR MEDICAL APPLICATIONS

L	Т	Р	С
0	0	3	1.5

### **Course Objectives**

To impart knowledge on

- 1. Working with various medical image data
- 2. Usage of Simulation tools for image processing
- 3. Process medical images using various methods

### **Course Outcomes:**

The Student will be able to

- 1. Demonstrate basic operations on a given image to obtain specific output
- 2. Produce enhanced images using spatial and frequency domain filters
- 3. Assess the performance of image restoration techniques under given condition
- 4. Identify the object in a given image through segmentation
- 5. Show the effect of image compression on given image data
- 6. Compute the features useful for image analysis

### List of Experiments:

- 1. Basic operations on images
- 2. Color conversion of images
- 3. Image enhancement using point operations
- 4. Image enhancement using spatial domain filters
- 5. Image enhancement using frequency domain filters
- 6. Image restoration in the presence of noise and degradation
- 7. Image segmentation using edge and region based methods
- 8. Morphological operations on images
- 9. Multiresolution analysis of images using wavelets
- 10. Image compression using lossless and lossy methods
- 11. Histogram processing o Images
- 12. Extraction of shape and texture features from an image
- 13. Image pseudo coloring

19BM2025	EMBEDDED SYSTEMS FOR BIOMEDICAL	L	Т	Р	С
	APPLICATIONS	3	0	0	3

# **Course Objectives:**

To impart knowledge on

- 1. Basic concepts of Embedded Systems
- 2. Various techniques used for designing an embedded system.
- 3. Real time system with an examples

### **Course Outcomes:**

The Student will be able to

- 1. Discuss the basics of embedded systems and its hardware units
- 2. Identify the various tools and development process of embedded system
- 3. Demonstrate the various I/O interfacing with microcontroller
- 4. Create the programming for embedded system design
- 5. Summarize the real time models, languages and operating systems
- 6. Design a real time embedded system for biomedical applications

# Module 1: System Design (7 Hours)

Embedded system, Processor embedded into a system, Embedded hardware units and devices in a system, Embedded software in a system, Embedded system architecture, Classifications, Skills required for an embedded system designer. Typical application scenario of embedded systems

### Module 2: Embedded Systems Design, Development Process and Tools (8 Hours)

Complex systems and microprocessor, Design process and metrics in embedded system, Design challenges, Optimising the design metrics, Issues related to embedded software development, Hardware software codesign, Embedded system design technology, Embedded software development process and tools, Host and Target machine, Linking and Locating Software, Getting embedded software into the target system, Design process

### Module 3: Real World Interfacing (8 Hours)

Study of microcontroller, Processor and memory organization, Switch, Keypad and LED interfacing, Seven segment display interfacing, Data Acquisition system, A/D, D/A converters, Timers, Counters, Actuators.

### Module 4: Programming Concepts (7 Hours)

Programming in assembly language and high level language, C program elements, Embedded C programming- Simple programs, High level language descriptions of software for embedded system, Java based embedded system design.

### Module 5: Techniques for Embedded Systems (8 Hours)

State Machine and state Tables in embedded system design, Simulation and Emulation of embedded systems. Real time models, Language and Operating Systems-Tasks and task states, operating system services, RTOS functions, Interrupt routine in RTOS environment.

### **Module 6: Biomedical Applications (7 Hours)**

Body temperature measurement, Stepper motor control. Embedded system in biomedical application-Wireless sensor technologies, Body sensor network, Patient monitoring system. Case study

### **Text Books:**

- 1. RajKamal, "Embedded Systems Architecture, Programming and Design", Tata McGrawHill ,Second Edition, 2008
- 2. Tim Wilhurst, "An Introduction to the Design of Small Scale Embedded Systems, Palgrave, 2004.

# **Reference Books:**

- 1. Tammy Noergaard, "Embedded Systems Architecture", Elsevier, 2005.
- 2. Frank Vahid, Tony Givargis, "Embedded Systems Design", Wiley India, 2006
- 3. Khandpur R.S, "Hand-book of Biomedical Instrumentation", Tata McGraw Hill, 2nd Edition, 2003.

19BM2026	EMBEDDED SYSTEMS LABORATORY FOR	L	Т	Р	С
19DW12020	<b>BIOMEDICAL APPLICATIONS</b>	0	0	3	1.5

### **Course Objectives:**

To impart knowledge on

- 1. To impart knowledge on the integration of hardwae circuits with software
- 2. To introduce the concepts of programming in an IDE and download it into a processor
- 3. To learn about the practical aspects of data acquistion and analysis

# **Course Outcomes:**

The Student will be able to

- 1. Design interfacing circuits to acquire real time data and process it using software
- 2. Develop real time embedded systems for biomedical applications
- 3. Apply communication protocols for data transmission
- 4. Create an embedded C program for various I/O interfacing
- 5. Implement timer concept for providing real time delay
- 6. Integrate the sensor with microcontroller for embedded system design

### List of Experiments:

- 1. Bit wise port access
- 2. Interfacing Running Display
- 3. Interfacing of byte wise input output module
- 4. Heart rate measurement using timer (for 60 sec)
- 5. Study of timer interrupt for pulse rate measurement
- 6. Interfacing temperature sensor
- 7. Relay Interface
- 8. Interfacing rehabilitation devices
- 9. Position control
- 10. Interfacing communication protocols- I<sup>2</sup>C
- 11. Wave generation for nerve and muscle stimulator
- 12. Real time application-Simulation

### 19BM2027

### **BIOMEMS LABORATORY**

L	Т	Р	С
0	0	3	1.5

# **Course Objectives:**

To Impart knowledge about

- 1. The working principle of MEMS sensors
- 2. To Study the methodologies of testing and calibration
- 3. To learn simulation tools for design and application development

### **Course Outcomes:**

The Student will be able to

- 1. Examine the functions and test the characteristics of MEMS sensors
- 2. Classify the methods of analyzing physiological models
- 3. Implement the appropriate design constrains
- 4. Evaluate the performance of sensors using simulation tools
- 5. Test and validate the performance of MEMS devices
- 6. Create and integrate MEMS based measurement systems for biomedical applications.

### List of Experiments

- 1. Study the characteristics of MEMS pressure sensor for Blood pressure measurement
- 2. Study the characteristics of MEMS flow sensor for respiration flowmetry
- 3. Study the characteristics of MEMS accelerometer for human movement
- 4. Study the characteristics of flexiforce sensor for angle measurement
- 5. Testing of thin film devices for optical and electrical properties
- 6. Construction of 3-D models of microdevices, blood vessels, bone using Comsol
- 7. Design of MEMS based microbeam using simulation tools Comsol
- 8. Design of MEMS based microcantilever using simulation tools Comsol
- 9. Design of MEMS based microdiaphragm using simulation tools Comsol
- 10. Design and simulation of MEMS device (pressure sensor) using Comsol
- 11. Simulation and Analysis of MEMS sensors using Comsol
- 12. Hardware Testing and Analysis of MEMS sensors using XRD, SEM and spectrometer.

19BM2028	M2028 MEDICAL IMAGING TECHNIQUES	L	Т	Р	С
19DN12020	MEDICAL IMAGING TECHNIQUES	3	0	0	3

### **Course Objectives:**

- 1. Study scattered radiations and different types of radio diagnostic unit
- 2. Study he techniques to visualize opaque, transparent organs.
- 3. Study the special techniques adopted to visualize different sections of any organ

### **Course Outcomes:**

The Student will be able to

- 1. List out the various medical imaging techniques.
- 2. Explain the principle of specific medical imaging techniques.
- 3. Interpret the imaging outputs.
- 4. Identify the suitable medical imaging techniques for specific pathology.
- 5. Devise new ideas to solve certain issues in medical imaging.
- 6. Justify the impact of medical imaging system for diagnosis.

# Module 1 : Medical X-Ray Equipment and Digital Imaging (8 Hours)

Nature of X-Rays - X- ray Absorption - Tissue Contrast . X-Ray Equipment – X- ray Tube, collimator, Bucky Grid, power supply. Digital Radiography - discrete digital detectors, storage phosphor and film Scanning. X-Ray Image intensifier tubes - Fluoroscopy – Digital Fluoroscopy. Angiography, Cine angiography. Digital Subtraction Angiography. Mammography.

# Module 2 : CT Imaging (7 Hours)

Principles of Tomography - First to Fifth generation scanners – Image reconstruction Technique - Back projection and Iterative method. Spiral CT Scanning - Ultra fast CT Scanners - X-Ray Sources – Collimation – X-Ray Detectors – Viewing System.

# Module 3 : Magnetic Resonance Imaging (MRI) (8 Hours)

Fundamentals of Magnetic Resonance -Principles of MRI pulse sequence – image acquisition and reconstruction techniques – MRI instrumentation magnetic gradient system RF coils – receiver system functional MRI Rotat ion and Precession – induct ion of a magnetic resonance signal – bulk Magnetization –

Relaxation Processes T1 and T2. – MRI artifacts- Various types of pulse sequences for fast acquisition of imaging, NMR spectroscopy - Application of MRI

# Module 4: Ultrasonic and Infrared Imaging (8 Hours)

Production of ultrasound – properties and principles of image formation, capture and display – principles of A-mode, B-mode and M-mode display – Doppler ultra sound and color flow mapping – applications of diagnostic ultra sound. Physics of thermography – imaging systems – pyroelectric Videocon camera clinical thermography – liquid crystal thermography.

# Module 5: PET and SPECT Imaging (7 Hours)

Introduction to emission tomography, basic physics of radioisotope imaging- Compton cameras for nuclear imaging, pet scanner principles, SPECT, computer techniques in fast acquisition analytic image reconstruction techniques, attenuation, scatter compensation in SPET spatial compensation in SPECT.

# Module 6: Other Imaging Techniques (7 Hours)

Optical coherence tomography (OCT): Introduction and its medical applications - Advances in image resolutions - Speed in Picture Archiving and Communication Systems (PACS) in medical imaging, Safety aspects in Radio diagnosis.

# **Text Books:**

19BM2029	MEDICAL EQUIPMENT MAINTENANCE AND	L	Т	Р	С
	TROUBLESHOOTING	3	0	0	3

# **Course Objectives:**

- 1. Understand troubleshooting of electrical and electronic equipment.
- 2. Learn the troubleshooting of medical equipment.
- 3. Apply the tools in design, testing and developing medical equipment

# **Course Outcomes:**

- 1. Identify the reasons for equipment failure.
- 2. Interpret the need for grounding aspects, maintenance and troubleshooting.
- 3. Construct the test bench, tools and methods for troubleshooting
- 4. Compare various standards and specifications.
- 5. Decide quality and safety standards
- 6. Formulate advanced methods to solve critical problems.

# Module 1: Testing of Electrical Equipments (8 Hours)

AC, DC power supply, Grounding, shielding, Guarding, insulation testing, insulation resistance measurement, Types of Circuit Breakers, Rating – Testing of circuit breakers –Transformer testing- Earthing –Earth wires – Earthing of appliances –contactor, relay testing–CT and PT, Panel wiring- Megger-Testing equipment and instruments.

# Module 2: Testing of Electronic Components (7 Hours)

Troubleshooting of PCB boards, Calibration of analog and digital sensor probe, Display interface, DC Power supply design, testing, Safe electrical practice,

Cables and standard, Fuse.

### Module 3: Testing of Surgical Equipment (8 Hours)

Functions and operating procedure-Testing and maintenance of Heart lung machine, surgical lights, ventilator, patient monitor, anesthesia machine, dialyzer, surgical tools.

# Module 4: Troubleshooting of Equipments (8 Hours)

X-ray machines, Troubleshooting of ECG recorders, incubator, baby warmer, infusion pumps, annual maintenance, contract requirements, vendor services, quality and safety standards.

# Module 5: Life Cycle Management of Medical Equipment (7 Hours)

Cost of the medical equipment, maintenance cost, replacement analysis, managing equipment service, decision making, extracting optimal benefit from medical equipment over its life cycle. Case study.

**Module 6: Reliability in medical devices:** (**7 Hours**)Need for reliability, Tools for reliability assurance, MTBF, MTTR, FMEA, Fault tree analysis, Markov method, cause failure analysis. Human errors in healthcare systems, human factors approach to reduce error, Quality assurance through regulatory compliance: ISO: 9000, FDA, IEEE, ASTM, UL, CE. Computerized Maintenance management system for medical equipment.

19BM2030	<b>19BM2030 HOSPITAL TRAINING</b>	L	,	Г	Р	С	
19DIV12030	19DM2030 HUSPITAL TRAINING	0	) (	0	2	1	

### **Course Objectives:**

- 1. To understand the scope of health care services and health policies.
- 2. To familiarize the medical device working standards, maintenance procedures
- 3. To know the need of biomedical engineers in research and development

### **Course Outcomes:**

- 1. Identify the need and significance of biomedical engineering and health policies.
- 2. Appreciate the need for standard and quality management in hospitals.
- 3. Apply the knowledge of computer and information technology in health care.
- 4. Develop technology to solve human problems.
- 5. Appraise the code of ethics in design and development
- 6. Evaluate device safety and ensure a secure hospital environment.

### Description

Provide Training to the students on challenges in Hospital equipment maintenance, Hospital Administration and Planning. It helps in developing leaders for solving problems in current issues of technology development, health care services, Telemedicine, Bio-Medical Waste Management and rural healthcare.

#### **Course objectives:**

To impart knowledge on

- 1. Basic structural and functional elements of human body.
- 2. Organs and structures involving in system formation and functions.
- 3. Understand all systems in the human body.

### **Course outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Recall the basic elements of human body.
- 2. Compare the major bones and their processes as they relate to each region of the body.
- 3. Interpret the major organs and components of the respiratory system and understand their functions.
- 4. Recognize the major organs and vessels of the cardiovascular system and understand their functions.
- 5. Describe briefly the basic components and functions of urinary and special sensing systems.
- 6. Demonstrate the structure and functions of nervous systems.

### Module 1: Basic Elements of Human Body (9 Hours)

Cell: Structure and organelles - Functions of each component in the cell. Cell membrane – transport across membrane – origin of cell membrane potential – Action potential Tissue: Types – Specialized tissues – functions, Types of glands.

### Module 2: Skeletal and Respiratory System (7 Hours)

Skeletal system: Bone types and functions – Joint - Types of Joint - Cartilage and functions

### Module 3: Respiratory System (7 Hours)

Respiratory System: Components of respiratory system – Respiratory Mechanism. Types of respiration - Oxygen and carbon dioxide transport and acid base regulation.

### Module 4: Circulatory System (8 Hours)

Blood composition - functions of blood – functions of RBC.WBC types and their functions Blood groups – importance of blood groups – identification of blood groups. Blood vessels - Structure of heart – Properties of Cardiac muscle – Conducting system of heart -Cardiac cycle – ECG - Heart sound - Volume and pressure changes and regulation of heart rate –Coronary Circulation. Factors regulating Blood flow.

### Module 5: Urinary and Special Sensory System (7 Hours)

Urinary system: Structure of Kidney and Nephron. Mechanism of Urine formation and acid base regulation – Urinary reflex – Homeostasis and blood pressure regulation by urinary system. Special senses: Eye and Ear.

### Module 6: Nervous System (7 Hours)

Structure of a Neuron – Types of Neuron. Synapses and types. Conduction of action potential in neuron Brain – Divisions of brain lobes - Cortical localizations and functions - EEG. Spinal cord – Tracts of spinal cord - Reflex mechanism – Types of reflex, Autonomic nervous system and its functions.

- 1. William F. Ganong,"Review of Medical Physiology, 22nd edition, McGraw Hill New Delhi, 2005
- 2. Eldra Pearl Solomon."Introduction to Human Anatomy and Physiology", W.B.Saunders Company, 2003.
- 3. Arthur C. Guyton, "Text book of Medical Physiology", 11 th Edition, Elsevier Saunders, 2006
- 4. Khandpur. R. S., "Handbook of Biomedical Instrumentation", Prentice Hall of India, New Delhi, 2003.

### 18BM2002

L

3

# **Course Objectives:**

To impart knowledge on

- 1. To provide introduction to the field of medical sensors and an in depth and quantitative view of device design and performance analysis.
- 2. To provide knowledge on the principle and operation of different medical transducers.
- 3. To introduce the application of sensors and transducers in the physiological parameter measuring system.

# **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Identify the calibration procedure for the basic instruments involved in physiological parameter measurement.
- 2. Interpret the errors in measurement by analyzing the performance characteristics of the sensors.
- 3. Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- 4. Apply the suitable design criteria for developing a medical sensor for a particular application.
- 5. Develop advanced medical sensors based on the basic transduction principles.
- 6. Predict the qualitative performance of advanced medical sensors.

# Module 1: Science of Measurement (8 Hours)

Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Error Free Instrument, Transfer Functions. Design Criteria, Generalized Instrument Specifications.

# Module 2: Biological sensors (7 Hours)

Study of various corpuscles like Pacinian, functions and modelling, Chemoreceptor, hot and cold receptors, baro- receptors, sensors for smell, sound, vision, osmolality and taste.

# Module 3: Biosensors (7 Hours)

Introduction, Advantages and limitations, various components of Biosensors, Biocatalysts based biosensors, bio-affinity based biosensors & microorganisms based biosensors, biologically active material and analyte. Types of membranes used in biosensor constructions.

# Module 4: Bio potential electrodes (8 Hours)

Electrodes Electrolyte Interface, HalfCell Potential, Polarization, Polarizable and Non Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes.Ion exchange membrane, electrodes, oxygen electrodes, CO2 electrodes enzyme electrode, construction, ISFET for glucose, urea.

# Module 5: Biochemical Sensors (7 Hours)

Electrolytic sensors, optical sensor, fiber optic sensors. Biosensors in clinical chemistry, medicine and health care.

# Module 6: Different transduction principles (8 Hours)

Temperature transducers, thermo resistive transducers, thermoelectric, p-n junction, chemical thermometry. Displacement transducers, potentiometric, resistive strain gauges, inductive displacement, and capacitive displacement transducer. Pressure transducer, indirect method, measurement of blood pressure using sphygmomanometer, instrument based on Korotkoff sound, strain gauge and LVDT transducers, capacitive and piezo-electric type, catheter tip transducers, measurement of intracranial pressure, catheter tip- implantable type.

# **Text Books**

- 1. Medical Instrumentation-Application and Design by John G. Webster, 2013
- 2. Transducers for Biomedical Measurements: Principles and Applications, Richard S.C. Cobbold, John Wiley & Sons, 2004.

- 1. Electronics in Medicine and Biomedical Instrumentation by Nandini K. Jog PHI Second Edition 2013.
- 2. Instrument Transducer An Intro to their performance and design, Hermann K P. Neubert.
- 3. Biomedical sensors fundamentals and application by Harry N, Norton.
- 4. Biomedical Transducers and Instruments, Tatsuo Togawa, ToshiyoTamma and P. Akeoberg.

# **Course Objectives:**

18BM2003

To impart knowledge on

- 1. To introduce the practical aspects of various medical transducers and their characteristics.
- 2. To impart knowledge in measurement of Resistance, Inductance and Capacitance using bridges.
- 3. To improve the skills in calibrating analog meters.

# **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Understand the method of calibration of basic instruments.
- 2. Analyze the performance characteristics of different sensors.
- 3. Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- 4. Apply the suitable design criteria for developing a medical sensor for a particular application.
- 5. Develop advanced medical sensors based on the basic transduction principles.
- 6. Predict the qualitative performance of advanced medical sensors.

# List of Experiments

- 1. Blood Pressure Measurement
- 2. Heart Sound Measurement
- 3. Heart Rate Measurement
- 4. 4.Pulse Measurement using Doppler Ultrasound
- 5. Galvanic Skin Resistance Measurement
- 6. Design of Hearing Aid
- 7. Temperature Measurement Using Thermistor and LM35
- 8. Displacement Measurement Using LVDT
- 9. Displacement Measurement Using Capacitive Transducer
- 10. Weight Measurement Using Strain Gauge
- 11. Temperature Measurement Using Resistance Temperature Detector
- 12. Measurement of Pressure

18BM2004	MEDICAL DIAGNOSTICS AND THERAPEUTIC	L	Т	Р	С
	EQUIPMENT I	3	0	0	3

# Course objectives:

To impart knowledge on

- 1. Principle of various bio potential recordings equipment.
- 2. Working of equipment used for physiological parameters.
- 3. Diagnostic and therapeutic procedures

# Course outcomes:

At the end of this course, students will demonstrate the ability to

- 1. Identify the procedures for acquisition of physiological signals
- 2. Demonstrate the methods for vital and biochemical parameters measurement
- 3. Describe the functions of various non invasive equipments
- 4. Illustrate the techniques for cardiac equipment
- 5. Assess the merits of the respiratory equipment based on its applications
- 6. Analyse the behavior of electrotherapy equipment.

# Module 1: Equipment for physiological signals acquisition (8 Hours)

Bioelectric signals (ECG, EMG, EEG, EOG & ERG) and their characteristics - Electrodes for ECG, EEG and EMG - Einthoven triangle, Standard 12-lead configurations - ECG Machine – EMG machine – 10-20 electrodes placement system for EEG - EEG machine – Heart sound and characteristics, PCG.

# Module 2: Vital parameter and biochemical parameter measurement (7 Hours)

Measurement of human body temperature, blood pressure monitor, body mass index, Heart rate, respiration rate, Blood pH, Blood pO2, Blood pCO2 measurement.

# Module 3: Equipments for non invasive methods (8 Hours)

Spirometer, cardiac output, blood flow meter and signal conditioning circuits. Heart rate measurement - Apnea detectors - Oximetry -Pulse oximeter, Ear oximeter - Computerized patient monitoring system – Bedside, Central Monitoring system.

# Module 4: Cardiac equipment (8 Hours)

External and implantable pacemakers, Programmable pacemakers, Power sources, Design of encapsulation and leads, Pacing system analyzers. Cardiac Defibrillators, Basic principles and comparison of different Defibrillators, Energy requirements, Synchronous operation, Implantable Defibrillators, Defibrillator analyzers.

# Module 5: Respiratory equipment (7 Hours)

Principles of constant pressure and constant volume ventilators, Basic principles of electromechanical, Pneumatic and electronic ventilators, Nebulizer, Ventilator testing.

### Module 6: Electrotherapy equipment (7 Hours)

Electro diagnosis, Electrotherapy, Electrodes, Stimulators for Nerve and Muscle, Stimulator for pain relief, Interferential current therapy, Spinal cord stimulator, Diaphragm pacing for artificial ventilation. Functional Electrical Stimulation.

18BM2005	DIUSIGNAL CUNDITIONING CIRCUITS	3	0	0	3	

# **Course Objectives:**

To impart knowledge on

- 1. Bioelectric amplifiers
- 2. Filters and circuits
- 3. Application of signal conditioning in biomedical field

# **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Identify the origin and characteristics of various biosignals and its acquisition.
- 2. Apply the signal conditioning circuits for biomedical field.
- 3. Analyze and deign bio filters and isolation circuits used in medical signal conditioning.
- 4. Interface the bioelectric signals with analog and digital circuits for data acquisition
- 5. Create the various circuits for designing medical equipments using different ICs
- 6. Recommend the various safety standards in biomedical instrumentation

### Module 1: Biopotential Measurement (8 Hours)

Biopotentials and bioelectric currents, Nature of Bio Electricity: Bioelectric Currents, Nernst Potential, Diffusion Potential, Action potential, Detection of Bio electric events, bio-electrode and electrode-skin interface, Need for bioamplifiers and biosignal Conditioning.

Module 2: Operational Amplifiers and Its Biomedical Applications (8 Hours)

Operational Amplifiers Basic opamps parameters, Ideal and practical opamp, application of opamp in biomedicine- Adder, subtractor, analog integrator, differentiator, preamplifiers, Transimpedence circuits.

### Module 3: Basic Filters and Isolation Circuits (7 Hours)

Active filters and Medical Isolation Amplifiers: First order and second order active filters, Instrumentation amplifier, Types of isolation amplifiers and optocouplers.

# Module 4: Biosignal Data Acquisition Systems (8 Hours)

Comparators, Comparator applications, Multivibrators, 555 timers, Astable and monostable, Pacemaker circuits, Aliasing and sampling, Analog to Digital, Digital to Analog conversion.

# Module 5: Special Analog Circuits (7 Hours)

Special analog circuits and systems used in biomedical transmission, Phase Detectors-Analog and Digital, Voltage Controlled Oscillators, Various VCO ICS, Phase locked loops.

# Module 6: Advanced Biomedical Instrumentation and Safety Standards (7 Hours)

Modulation and demodulation of biosignals, IC thermometers and advanced biomedical instrumentation systems, Electrical Interface problems and Safety Standards in Bio Potential Measurements.

	LABORATORY	0	0	2	1

### **Course objectives:**

To impart knowledge on

- 1. Design of filters and amplifier circuits for bioelectric amplifiers.
- 2. Different preamplifiers used for amplifying the bio signals.
- 3. Application of signal conditioning in biomedical field.

### **Course outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Summaries the principles of various digital ICs
- 2. Identify and apply the amplifiers and various signal conditioning circuits for biosignals acquisition.
- 3. Demonstrate the basic concepts for filtering of bio signals
- 4. Design and build various analog and digital interfaces for signal conversion
- 5. Select suitable circuits to design various biomedical devices
- 6. Apply and analyze the front end analogue circuit design for ECG, EMG, EEG, etc.

# List of Experiments

- 1. Study of basic digital logic used in biosignal conditioning
- 2. Study of different data storage flip-flops used in medical hardware's
- 3. Study of different data storage flip-flops used in medical hardware's
- 4. Design of basic op-amp circuits for biosignal processing
- 5. Design of waveshaping circuits
- 6. Instrumentation amplifier for ECG amplification
- 7. Design of constant current source and transimpedence circuits.
- 8. Design of preampilifer circuit
- 9. Design of medical isolation amplifier
- 10. Biosignal data acquisition system
- 11. Design of pacemaker circuit
- 12. Design of active filters for biosignal acquisition (PPG Signal Acquisition)

18BM2007	DIOCONTROL SYSTEM	L	Т	Р	С	
16D1012007	<b>BIOCONTROL SYSTEM</b>	3	0	0	3	

# **Course Objectives:**

To impart knowledge on

- 1. Bio control systems modeling technique.
- 2. Time response analysis and frequency response analysis.
- 3. Analyze biological control systems.

### **Course Outcomes:**

- At the end of this course, students will demonstrate the ability to
  - 1. Represent the system in various forms.

- 2. Interpret the response of the system in time domain.
- 3. Analyze the frequency response of any system
- 4. Examine the stability of the system.
- 5. Compute the mathematical model of physiological systems.
- 6. Summarize the features of physiological system.

### Module 1: Engineering Control Systems (7 Hours)

Basic structure of control system, Positive and Negative Feedback, transfer functions, modeling of electrical systems, block diagram and signal flow graph representation of systems

### Module 2: Time Domain Analysis (8 Hours)

Introduction to simulation, Step response of first order and second order systems, determination of time domain specifications of first and second order systems. Definition of steady state error constants and its computation.

### Module 3: Frequency Domain Analysis (8 Hours)

Frequency response, determination of gain margin and phase margin using Bode plot, use of Nichol's chart to compute resonant frequency and band width.

### Module 4: Stability Analysis (8 Hours)

Definition of stability, Routh-Hurwitz criteria of stability, construction of root locus, Nyquist stability criterion, Nyquist plot and determination of closed loop stability.

### Module 5: Physiological Systems (7 Hours)

Difference between engineering and physiological control systems, generalized system properties, models with combination of system elements. Physiological system modeling, linear model of respiratory mechanics.

### Module 6: Case Studies (7 Hours)

Mathematical Model of chemical regulation of ventilation, linear model of muscle mechanics, model of regulation of cardiac output, model of Neuromuscular reflex motion

### **Text Books**

18BM2008	<b>BIOMEDICAL IMAGE PROCESSING</b>	L		Г	Р	С	
10D112000	<b>DIOMEDICAL IMAGE PROCESSING</b>	3	1	0	0	3	

# **Course Objectives:**

# To impart knowledge on

- 1. Digital image fundamentals.
- 2. Low level image processing techniques.
- 3. Segment, compress and analyze images

### **Course outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Describe the digital image fundamentals for a given condition
- 2. Illustrate the effect of image enhancement techniques on images
- 3. Distinguish between image restoration filters
- 4. Discuss about the image segmentation procedure
- 5. Compute the level of compression achieved for the given image data
- 6. Explain and compute features useful for image representation and recognition

# Module 1: Digital Image Fundamentals

Introduction – Origin – Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels - color models.

### Module 2: Image Enhancement

Spatial Domain:Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering – Frequency Domain:Introduction to Fourier Transform – Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters.

### Module 3: Image Restoration and Segmentation

Noise models– Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering.

### Module 4: Segmentation

Detection of Discontinuities–Edge Linking and Boundary detection – Region based segmentation-Morphological processing- erosion and dilation.

### Module 5: Wavelets and Image Compression

Wavelets – Subband coding - Multiresolution expansions - Compression:Fundamentals – Image Compression models – Error Free Compression – Variable Length Coding – Bit-Plane Coding – Lossless Predictive Coding – Lossy Compression – Lossy Predictive Coding – Compression Standards.

# Module 6: Image Representation and Recognition

Boundary representation – Chain Code – Polygonal approximation, signature, boundary segments – Boundary description – Shape number – Fourier Descriptor, moments- Regional Descriptors – Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.

18BM2009	BIOMEDICAL IMAGE PROCESSING LABORATORY	L	Т	Р	С
10D1012009	<b>BIOMEDICAL IMAGE PROCESSING LADORATORY</b>	0	0	2	1

# **Course objectives**

To impart knowledge on

- **1.** Work with various medical image data
- 2. Matlab for image processing
- 3. Process medical images using various methods

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Demonstrate basic operations on a given image to obtain specific output
- 2. Produce enhanced images using spatial and frequency domain filters
- 3. Assess the performance of image restoration techniques under given condition
- 4. Identify the object in a given image through segmentation
- 5. Show the effect of image compression on given image data
- 6. Compute the features useful for image analysis

### List of Experiments:

- 1. Basic operations on images
- 2. Colour conversion of images
- 3. Image enhancement using spatial domain filters
- 4. Image enhancement using frequency domain filters
- 5. Image restoration in the presence of noise alone
- 6. Image restoration in the presence of noise and degradation
- 7. Image segmentation using edge and region based methods
- 8. Morphological operations on images
- 9. Multiresolution analysis of images using wavelets
- 10. Image compression using lossless and lossy methods
- 11. Representation of boundary in an image
- 12. Extraction of shape and texture features from an image

### **BIOSIGNAL PROCESSING**

#### **Course Objectives:**

To impart knowledge on

- 1. Signal processing fundamentals.
- 2. Filter design and its applications.
- 3. Analyzing biosignals using biosignal processing methods

### **Course outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Describe the fundamentals of signal processing
- 2. Identify the effect of IIR Digital filter design
- 3. Illustrate the various applications of IIR filter
- 4. Discuss about the FIR Filter design and applications
- 5. Show the various methods to analyze biosignals
- 6. Explain the biosignal processing concepts for real time applications

### Module 1: Fundamentals of Signal Processing (7 Hours)

Sampling and aliasing, simple signal conversion systems, Spectral analysis, FFT -decimation in time algorithm, Decimation in Frequency algorithm, Different types of bioelectric signals and its basic characteristics.

# Module 2: IIR Digital Filter Design (8 Hours)

Impulse invariant method, Bilinear transformation method, Design of bilinear transformation method using Butterworth and Chebyshev techniques, Design of impulse invariant method using Butterworth and Chebyshev techniques.

### Module 3: IIR Digital Filter Applications (8 Hours)

Warping and pre-warping effect, frequency transformation, Frequency domain filters- removal of high frequency noise - Butterworth low pass filters, Removal of low frequency noise - Butterworth high pass filters

### Module 4: FIR Digital Filter Design and Its Applications (7 Hours)

Characteristics of FIR filter, FIR filter design using windowing techniques- Rectangular, Hamming, Hanning and Blackmann windows, Time domain filters- synchronized averaging, moving average filters, Introduction to adaptive filters.

# Module 5: Analysis of Biosignals (8 Hours)

P-wave detection, QRS complex detection-derivative based method, Pan Tompkins algorithm, Template matching method, Signal averaged ECG, Analysis of heart rate variability-time domain method and frequency domain methods, Synchronized averaging of PCG envelopes, Envelogram, analysis of PCG signal, EMG signal analysis.

### Module 6: Case studies in BSP (7 Hours)

ECG rhythm analysis, normal and ectopic ECG beats, analysis of exercise ECG, Analysis of respiration, spectral analysis of EEG signals, Case studies- in ECG and PCG, PCG and carotid pulse, ECG and Atrial Electrogram, Cardio respiratory interaction, EMG and Vibromyogram (VMG).

# Course objectives:

To impart knowledge on

- **1.** Various biosignals
- 2. Matlab/LabVIEW for biosignal processing
- 3. Processing biosignals using various methods

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Demonstrate Fourier transformations on a given data
- 2. Design IIR and FIR filters for the given specification
- 3. Assess the characteristics of given ECG signal
- 4. Examine the given EMG signal for specific analysis
- 5. Show the reason for changes in respiratory signal
- 6. Demonstrate the usage of software tools for biosignal analysis

### List of Experiments:

- 1. DFT and FFT computation
- 2. IIR filters design-digital Butterworth filter
- 3. IIR filters design-digital Chebyshev filter
- 4. FIR filter design using windowing techniques
- 5. Adaptive filter design
- 6. Analysis of PPG signals
- 7. Detection of QRS complex in ECG
- 8. Analysis of EMG
- 9. Analysis of heart rate variability
- 10. Analysis of respiratory signal

~ • • •					

### **Course objectives:**

To impart knowledge on

- 1. Various soft computing techniques
- 2. Design of various neural networks
- 3. Fuzzy logic and genetic algorithm

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Describe various characteristics of artificial neural network
- 2. Explain the architecture and training algorithm for a given neural network
- 3. Discuss the fuzzy logic concepts using examples
- 4. Interrelate genetic algorithm concepts for the given problem
- 5. Assess the significance of hybridization of soft computing techniques

# 6. Explain the application of given soft computing technique

### Module 1: Introduction to Artificial Neural Networks (8 Hours)

Characteristics- learning methods – taxonomy – Evolution ofneural networks- McCulloch-Pitts neuron - linear separability - Hebb network - supervised learning network: perceptronnetworks - adaptive linear neuron, multiple adaptive linear neuron

### Module 2: Types of Neural Networks (8 Hours)

BPN, RBF, TDNN- associative memory network: auto-associative memory network, heteroassociative memory network, BAM,hopfield networks, iterative auto associative memory network & iterative associative memory network –unsupervised learning networks: Kohonen self organizing feature maps, LVQ – CP networks, ART network

### Module 3: Fuzzy Logic (8 Hours)

Membership functions: features, fuzzification, methods of membership value assignments-Defuzzification: lambda cuts - methods - fuzzy arithmetic and fuzzy measures: fuzzy arithmetic extension principle - fuzzy measures - measures of fuzziness -fuzzy integrals - fuzzy rule base and approximate reasoning : truth values and tables, fuzzy propositions, formation of rulesdecomposition frules, aggregation of fuzzy rules, fuzzy reasoning-fuzzy inference systems-overview of fuzzy expertsystem-fuzzy decision making

### Module 4: Genetic Algorithm (7 Hours)

Genetic algorithm and search space - general genetic algorithm – operators - Generational cycle - stopping condition – constraints - classification - genetic programming – multilevel optimization – reallife problem- advances in GA

### Module 5: Hybrid Soft Computing Techniques (7 Hours)

Neuro-fuzzy hybrid systems - genetic neuro hybrid systems - genetic fuzzy hybrid and fuzzy genetichybrid systems - simplified fuzzy ARTMAP

### Module 6: Applications (7 Hours)

A fusion approach of multispectral images with SAR, optimization of traveling salesman problem using genetic algorithm approach, soft computing based hybrid fuzzy controllers

18BM2013	MODELLING OF PHYSIOLOGICAL SYSTEMS	L	Т	Р	С	
10DIV12015	MODELLING OF PHISIOLOGICAL SISTEMS	3	0	0	3	

### **Course Objectives:**

To impart knowledge on

- 1. Basic ideas related to modeling.
- 2. Different modelling techniques of physiological systems.
- 3. Various regulatory systems of the human body.

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Analyze the concepts of modelling
- 2. Differentiate the dynamics and static characteristics of physiological systems
- 3. Assemble the various concepts in modelling of circulatory system
- 4. Design and perform the modelling for physio thermo regulatory systems
- 5. Create various models for human filtration system
- 6. Evaluate the mass-balance concept for biological system

### Module 1: Basics of physiological control systems (7 Hours)

Systems Analysis, examples of physiological control systems, differences between engineering and physiological control systems. Generalized system properties, mathematical approach, electrical analogs, linear models, lung mechanics, muscle mechanics, distributed parameter versus lumped parameter models

### Module 2: Analysis of Physiological Models (7 Hours)

Static and dynamic analysis of physiological systems: regulation of cardiac output, blood glucose regulation, chemical regulation of ventilation, electrical model of neural control mechanism

### Module 3: Modelling of Circulatory System (7 Hours)

Circulatory System: Physical, chemical and rheological properties of blood, problems associated with extra corporeal blood flow, dynamics of circulatory system.

**Module 4: Modelling of Regulatory System (8 Hours)** Thermal Regulatory System: Parameters involved, Control system model etc. Biochemistry of digestion, types of heat loss from body, models of heat transfer between subsystem of human body like skin core, etc. and systems like within body, body, environment, etc.

**Module 5: Modelling of Filteration In Human Body (8 Hours)** Ultra-Filtration System: Transport through cells and tubules, diffusion, facilitated diffusion and active transport, methods of waste removal, counter current model of urine formation in nephron, Modeling Henle's loop.

# Module 6: Modelling and Regulation Of Respiration (8 Hours)

Respiratory System: Modelling oxygen uptake by RBC and pulmonary capillaries, Mass balancing by lungs, Gas transport mechanisms of lungs, oxygen and carbon dioxide transport in blood and tissues

### **Text Books**

10DM2014	DEAL TIME EMDEDDED SVSTEMS	L	Т	Р	С	
18BM2014	REAL TIME EMBEDDED SYSTEMS	3	0	0	3	

### **Course Objective:**

To impart knowledge on

- 1. Basic concepts of Embedded Systems
- 2. Various techniques used for designing an embedded system.
- 3. Real time system with an examples

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Discuss the basics of embedded systems and its hardware units
- 2. Identify the various tools and development process of embedded system
- 3. Demonstrate the various I/O interfacing with microcontroller
- 4. Create the programming for embedded system design
- 5. Summarize the real time models, languages and operating systems
- 6. Design a real time embedded system for biomedical applications

### Module 1: System Design (7 Hours)

Embedded system, Processor embedded into a system, Embedded hardware units and devices in a system, Embedded software in a system, Embedded system architecture, Classifications, Skills required for an embedded system designer. Typical application scenario ofembedded systems

# Module 2: Embedded Systems Design, Development Process and Tools (8 Hours)

Complex systems and microprocessor, Design process and metrics in embedded system, Design challenges, Optimising the design metrics, Issues related to embedded software development, Hardware software co-design, Embedded system design technology, Embedded software development process and tools, Host and Target machine, Linking and Locating Software, Getting embedded software into the target system, Design process and design examples.

### Module 3: Real World Interfacing (8 Hours)

Study of microcontroller, Processor and memory organization, Switch, Keypad and LED interfacing, Seven segment display interfacing, Data Acquisition system, A/D, D/A converters, Timers, Counters, Actuators.

### Module 4: Programming Concepts (7 Hours)

Programming in assembly language and high level language, C program elements, Embedded C programming- Simple programs, High level language descriptions of software for embedded system, Java based embedded system design.

**Module 5: Techniques for Embedded Systems (8 Hours)** State Machine and state Tables in embedded system design, Simulation and Emulation of embeddedsystems.Real time models, Language and Operating Systems-Tasks and task states, operating system services, RTOS functions, Interrupt routine in RTOS environment.

### Module 6: Applications (7 Hours)

Body temperature measurement, Speed control of DC motor. Stepper motor control. Embedded system in biomedical application- Wireless sensor technologies, Body sensor network, Patient monitoring system.

18BM2015	MEDICAL DIAGNOSTICS AND THERAPEUTIC	L	Т	Р	С
16D1012015	EQUIPMENT II	3	0	0	3

# **Course Objectives:**

To impart knowledge on

- 1. Pulmonary analyzers and aid equipments and their functions on respiratory system
- 2. Physiotherapy and electrotherapy equipments
- 3. Instruments dealing with kidney and bones, sensory measurements and special equipments

### **Course outcome:**

At the end of this course, students will demonstrate the ability to

- 1. Describe the principle involved in clinical and optical equipments
- 2. Identify the various therapeutic devices for pulmonary diseases.
- 3. Apply the appropriate therapeutic device related to kidney ailment.
- 4. Demonstrate the functions and applications of electrotherapy and lasers
- 5. Assess the merits and demerits of the diagnostic equipments for basic senses.
- 6. Design new therapeutic devices for particular application based on given specifications.

### Module 1: Clinical and Optical Equipments (8 Hours)

Clinical equipment's, glucometer, hemoglobin monitor, Ultrasound scanner, holter monitor, multi parameter monitor, capsule endoscopy, foot scanner., Optical Method - Colorimeter, Spectro photometer, Flame photometer – Chromatography – Mass Spectrometer - Electrical hazard – Micro- and Macro- shock - Patient safety procedures.

### Module 2: Pulmonary Analyzers and Optical Equipments (8 Hours)

Regulation of Breathing - Pulmonary gas flow measurements - Pulmonary volume measurements - Respiratory gas analyzers – Nitrogen Gas Analyzer, Oxygen Analyzer - Humidifier, IPPB Unit - Anesthesia machine.

### Module 3: Instruments Dealing With Kidney (7 Hours)

Regulation of Water and Electrolyte Balance – Artificial Kidney – Hemo dialysis - Crafts for dialysis - Peritoneal dialysis - Dialyzers – different types.

### Module 4: Electrotherapy Equipment and Therapeutic Lasers (7 Hours)

High frequency heat therapy, Principle, Short wave diathermy, Microwave diathermy, Ultrasonic therapy, Lithotripsy, Therapeutic IR radiation, Therapeutic UV Lamps. Basic principles of Biomedical LASERS: Applications of lasers in medicine, CO2 laser, He-Ne laser, Nd-YAG and Ruby laser.

### Module 5: Sensory Instrumentation (8 Hours)

Mechanism of Hearing, Sound Conduction System - Basic Audiometer, Pure tone audiometer, Audiometer system Bekesy – Hearing Aids - Ophthalmoscope – Tonometer - Measurement of Basal Skin response and Galvanic skin response - Instruments for testing Motor responses - Experimental Analysis of Behavior - Biofeedback Instrumentation.

### **Module 6: Special Equipments (7 Hours)**

 $\label{eq:components} Endoscopy-Laparoscopy-Cryogenic Equipment - Automated drug delivery system - Components of drug infusion system - Implantable infusion systems, BMD Measurements - SXA - DXA - Quantitative ultrasound bone densitometer$

18BM2016	<b>BIOMEDICAL INSTRUMENTATION LABORATORY</b>	L 0	Т 0	P 2	C 1
a 11.4					

# Course objective:

To impart knowledge on

- 1. Recording of bio signals and analyzing.
- 2. Preamplifiers used for amplifying the bio signals.
- 3. Measurements and monitoring of physiological parameters.

### **Course outcome:**

At the end of this course, students will demonstrate the ability to

- 1. Illustrate the working procedure of medical instruments.
- 2. Identify the suitability of diagnostic and therapeutic equipment for specific applications.
- 3. Analyze the performance of various biomedical equipment and infer their safety aspects.
- 4. Apply appropriate measurement techniques.
- 5. Design portable instruments capable of recording bio signals.
- 6. Evaluate the performance of medical instruments.

### List of Experiments:

- 1. Real time acquisition of ECG and its analysis
- 2. Analysis of EEG signal using 10-20 electrode system
- 3. EMG signal acquisition and Analysis
- 4. Audiometer
- 5. Acquisition of Heart sounds using PCG
- 6. Pulse oximeter
- 7. Dialyzer
- 8. Spirometer
- 9. TENS
- 10. Real time patient monitoring system
- 11. Surgical Diathermy study
- 12. Defibrillator Models Study

18BM2017	EMBEDDED BASED BIOMEDICAL SYSTEMS	L	Т	Р	С	
18BM2017	LABORATORY	0	0	2	1	

# Course Objective:

### To impart knowledge on

- 1. To impart knowledge on the integration of hardwae circuits with software
- 2. To introduce the concepts of programming in an IDE and download it into a processor
- 3. To learn about the practical aspects of data acquistion and analysis

### **Course Outcome:**

At the end of this course, students will demonstrate the ability to

- 1. Design interfacing circuits to acquire real time data and process it using software
- 2. Develop real time embedded systems for biomedical applications
- 3. Apply communication protocols for data transmission
- 4. Create an embedded C program for various I/O interfacing
- 5. Implement timer concept for providing real time delay
- 6. Integrate the sensor with microcontroller for embedded system design

### List of Experiments:

- 1. Bit wise port access
- 2. Interfacing Running Display

- 3. Interfacing of byte wise input output module
- 4. Heart rate measurement using timer (for 60 sec)
- 5. Study of timer interrupt for pulse rate measurement
- 6. Interfacing temperature sensor
- 7. Relay Interface
- 8. Interfacing rehabilitation devices
- 9. Position control
- 10. Interfacing communication protocols- I<sup>2</sup>C
- 11. Wave generation for nerve and muscle stimulator
- 12. Real time application-Simulation

18BM2018	BIOELECTRONICS	L	Т	Р	С	
10DIV12010	DIUELECIKUNICS	3	0	0	3	

# **Course Objectives:**

To impart knowledge on

- 1. Basic structural and functional elements of human cell.
- 2. Organs and structures involving in system formation and functions.
- 3. Origin of bioelectric signals and its acquisition.

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Analyze the ionic activity in cells and generation of action potential.
- 2. Illustrate briefly the basic functions of bioelectrodes
- 3. Demonstrate the medical sensors based on the basic transduction principles.
- 4. Interpret the cardiac action potentials for diagnostic purpose
- 5. Recognize briefly the basic components and functions of EEG.
- 6. Describe briefly the basic methods of various bioelectric signal acquisition

# Module 1: Biopotential (7 Hours)

Cell membrane: Structure, Excitable cells, Nernst potential, Resting membrane potential, Polarized state, Goldman Hodgkin Katz equation, Action potential, Propagation of nerve impulses, Refractory period, Hodgkin Huxley model of squid gait axon membranes, Modes of transport of substances across the cell membranes.

### Module 2: Bioelectrodes (7 Hours)

Electrode electrolyte interface, Half-cell potential, Polarisable and Non-polarisable electrodes - Skin electrode interface – Bio-electrodes: Surface- Micro-. Needle electrodes - Equivalent circuits of electrodes , pH, pO2, pCO2 - Ion sensitive Field effect Transistors.

### Module 3: Electrical Activity of the heart (7 Hours)

Cardiac muscle, Action potentials in cardiac muscle, SA node, Origin and propagation of rhythmical excitation & contraction, refractoriness, regular and ectopic pace makers, Electrocardiogram - Einthoven triangle, Standard 12-lead configurations - ECG Machine, Arrhythmias.

### Module 4: Electrical Activity of the brain (8 Hours)

Electrical activity of brain – Sleep stages, Brain waves, waveforms & measurements, Evoked potentials, 10-20 electrodes placement system for EEG - EEG machine.

### Module 5: Bioelectric Signal Acquisition (8 Hours)

Bioelectric signals (EMG, EOG & ERG, PPG, PCG) and their characteristics – Electrodes for EMG, PPG, PCG, Heart sound and characteristics, EMG Machine.

### Module 6: Biomedical Instruments and measurement of physiological parameters (8 Hours)

Transducer and measurement of physiological events, Resistive transducer – metallic strain gauges, catheter type transducer, catheter tip transducer, Capacitive transducer, Temperature transducers, Pressure transducer-measurement of Blood pressure – Blood flow – Cardiac output measurement – Heart rate – Respiration rate – Measurement of lung volume – Oximeters – Audiometer.

	18BM2019	<b>BIOMEDICAL INSTRUMENTATION</b>	L 3	Т 0	Р 0	C 3
--	----------	-----------------------------------	--------	--------	--------	--------

# **Course Objectives:**

To impart knowledge on

- 1. Fundamentals of anatomy and human physiology system and its functions.
- 2. Concepts of physiological parameters measurement.
- 3. Various medical instruments for biomedical applications.

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Identify the need of understanding human anatomy and physiology system
- 2. Select the suitable acquisition method for analysing biomedical signal and vital parameters measurement.
- 3. Apply the knowledge of biomedical instruments to practical applications
- 4. Categorize the parameter monitoring techniques based on the application and relevance.
- 5. Design the various structure for patient safety
- 6. Develop systems for real time bio signal acquisition and processing.

# Module 1: Anatomy and Physiology of Human Body (8 Hours)

The cell and its electrical activity– Principle physiological system: Cardiovascular System, Nervous system, Respiratory system, Muscular system – Origin of bioelectric signal – Bioelectric signals: ECG, EMG, EEG, EOG and their characteristics.

### Module 2: Measurement of Physiological Parameters (8 Hours)

Physiological transducers – Measurement of Blood pressure – Blood flow – Cardiac output measurement – Heart rate – Respiration rate – Measurement of lung volume – Oximeters – Audiometer.

### Module 3: Therapeutic Equipments and Patient Safety (8 Hours)

Electro Surgical unit: Short wave and microwave diathermy – Laser surgical unit – Defibrillators – Pacemaker – Heart Lung machine – Dialyser – Anesthesia machine – Ventilators – Nerve stimulators – Total artificial heart (TAH) – Patient Safety: Electric Shock Hazards, Leakage Current

### Module 4: Clinical Laboratory Instruments (7 Hours)

Clinical Flame photometer – Spectrophotometer – Colorimeter – Chromatography–Blood Gas Analyzer – Blood pH Measurement– Measurement of Blood pCO2– Blood pO2 Measurement– Blood Cell Counters: Types and Methods of cell counting

### Module 5: Imaging Technique (7 Hours)

 $X-\ ray\ -\ C.T.\ scan\ -\ MRI\ instrumentation\ -\ Ultrasound\ scanner\ -\ Vector\ cardiograph\ -\ Echo\ cardiograph\ -\ Angiography$ 

# Module 6: Telemetry (7 Hours)

Wireless telemetry, Single channel and multichannel telemetry system– Multi patient Telemetry – Implantable Telemetry systems

### 18BM2020

### **Course Objectives:**

To impart knowledge on

- 1. To understand the need and significance of Clinical Engineering and Health Policies.
- 2. To familiarize the training strategies, quality management policies and information technology used in health care.
- 3. To know the needs of managerial training to hospital staffs

### **Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- 1. Identify the need for clinical engineering in healthcare system.
- 2. Evaluate the use of various health policies.
- 3. Describe how high quality training is delivered for technical staff.
- 4. Demonstrate the quality management concept in health care.
- 5. Debate the concepts of quality and safety.
- 6. Apply the concept of information technology in medicine.

# Module 1: Need and scopes of clinical engineering (8 Hours)

Clinical engineering program, Educational responsibilities, Role to be performed by them in hospital, Staff structure in hospital

### Module 2: National health policies (7 Hours)

Need for evolving health policy, Health organization in state, Health financing system, Health education, Health insurance, Health legislation.

### Module 3: Training and management of technical staff in hospital (8 Hours)

Difference between hospital and industrial organization, Levels of training, Steps of training, Developing Training program, Evaluation of training, Wages and salary, Employee appraisal method.

Module 4: Codes and quality management in health care (8 Hours)

Quality management in hospitals and clinical laboratories, Necessity for standardization and Quality management, NABH and NABL standards, FDA, Joint Commission of Accreditation of hospitals

### Module 5: Standards in health care (7 Hours)

ICRP and other standard organization, Methods to monitor the standards, Overview of Medical Device regulation and regulatory agencies.

Module 6: Computers and information technology in medicine and Healthcare (7 Hours)

Computer application in ICU, Picture Archival System (PACS) for Radiological images department, Clinical laboratory administration, Patient data and medical records, Communication, Simulation

18BM3001	ADVANCED BIOMEDICAL INSTRUMENTATION	L	Т	Р	С	
	DESIGN	3	0	0	3	

# **Course Objectives:**

The student should be made to:

- 1. Understand the fundamentals of human physiology system and its functions.
- 2. Learn the fundamental concepts of physiological parameters measurement.
- 3. Apply the concepts of various instrumentation techniques for biomedical applications.

# **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the basic functions of various human physiological systems
- 2. Demonstrate an interfacing circuit for real time bio signal acquisition

- 3. Construct the suitable instrumentation technique for a specific illness
- 4. Categorize the medical devices based on its biomedical applications
- 5. Assess the various parameters, constraints in methodology for effective diagnosis
- 6. Design of advanced biomedical equipments for various diseases and ensure patient safety

**Module 1: Introduction To Human Physiology: (7 Hours)** Circulatory system – cardio vascular system-central nervous system – respiratory system – muscular skeletal system – digestive system – excretory system – sensory organs – voluntary and involuntary action.

**Module 2: Biopotentials And Their Measurements(8 Hours)** cell and its structure – resting potentials – action potentials – bioelectric potentials – measurement of potentials and their recording – Electrode theory – bipolar and Unipolar electrode-surface electrode – electrode impedance –equivalent circuit for extra cellular electrodes- micro electrodes. basic principles of ECG, EEG, EMG.

**Module 3: Advanced Medical Instrumentation**: (7 **Hours**) Design of instrumentation system for physiological measurements-temperature, pressure, strain, weight, angle measurements using encoder, flow measurements. Sensor selection for speed, location and acceleration measurement. Case study.

**Module 4: Cardiovascular System And Instrumentation** (8 Hours) Design of instrumentation system for Blood pressure measurement, selection of sensors, design specifications, blood flow measurements, phonocardiography, Cardiac pacemakers, heart lung machines, Tread Mill, Test design of interfacing circuits. Design of interface system. Case study.

**Module 5: Respiratory System And Instrumentation:** (7 Hours) Mechanics of breathing, regulation of respiration, design of instrumentation system for respiratory system, selection of transducers, artificial respiration therapy, artificial mechanical ventilation, troubleshooting and maintenance of ventilators. Design of interfacing circuits. Case study.

**Module 6: Neurological Instrumentation System: (8 Hours)** Neurophysiology, design of EEG amplifiers, wireless EEG, Bispectral Index EEG measurements for depth of anesthesia monitoring.

18BM3002	ADVANCED MEDICAL SIGNAL PROCESSING	L	Т	Р	С	
10D1013002	ADVANCED WIEDICAL SIGNAL I KOCESSING	3	0	0	3	

# **Course Objective**

The student should be made to:

- 1. Know the basic concepts of Bio signal Processing
- 2. Learn about the filtering techniques used in Medical Signal Processing
- 3. Understand the Applications of Signal Processing for Diagnosis.

### **Course Outcome:**

Upon the completion of this course, the student will be able to:

- 1. Summarize the basic concepts of digital signal processing techniques.
- 2. Identify the nature of Biomedical signals.
- 3. Apply the Filtering Techniques.
- 4. Analyze the Noise Cancellation Techniques for Biosignals.
- 5. Understand various Techniques for Detection of Events.
- 6. Develop systems for Biosignal Acquisition and Analysis

**Module 1: Overview of Digital Signal Processing And Applications(7 Hours)** - Sampling and aliasing , Signal reconstruction, Signal conversion systems, convolution - Correlation - FFT - decimation in time algorithm, Decimation in Frequency algorithm

**Module 2: Introduction to biomedical signals**: (8 **Hours**) Nature of biomedical signals - Examples of biomedical signals-EEG, EMG,ECG, VMG, VAG, evoked potentials, Event Related Potentials, Speech Signal, Bioacoustic signals - Objectives and Difficulties of Biomedical Signal Analysis

**Module 3: Filtering Techniques:**(**7 Hours**) Random Noise, Structured Noise, and Physiological Noise Time domain filtering – Synchronous averaging, Moving average filters, Frequency domain filters – Design of Butterworth filters- optimal filtering.

**Module 4: Noise Cancellation in Bio Signals:** (8 **Hours**) Adaptive noise cancellation-LMS and RLS algorithms in adaptive filtering – Application: Motion Artifacts in ECG, Powerline Interference in ECG, Maternal Interference in ECG.

**Module 5:** Analysis of Biosignals: (7 Hours) Cardiological Signal Processing - Methods in Recording ECG, Waves and Intervals of ECG - ECG Data Acquisition, ECG Parameters and Their Estimation - ECG QRS Detection Technique - Template Matching Technique - Differentiation Based QRS Detection Technique - Simple QRS width Detection Algorithm - High Speed QRS detection Algorithm - Estimation of R-R Interval - Estimation of ST Segment - Analysis of PCG signal - Analysis of EMG signal and EEG Signal.

**Module 6: Applications:** (8 **Hours**) Adaptive Segmentation of ECG and PCG signals - Time varying analysis of heart rate variability - Detection of Coronary Artery Disease - Analysis of Ectopic ECG beats.

18BM3003	APPLIED MEDICAL IMAGE PROCESSING	L	Т	Р	С	
1901/12002	APPLIED MEDICAL IMAGE PROCESSING	3	0	0	3	

### **Course Objectives:**

The student should be made to:

- 1. Learn the fundamentals of medical image processing
- 2. Understand various medical image processing techniques
- 3. Apply the methodologies for clinical applications

### **Course Outcomes:**

Upon the completion of this course, the student will be able to:

- 1. Describe the fundamentals to represent the images as per the given requirement
- 2. Discuss the segmentation method for a given clinical application
- 3. Explain the spatial transformation and its use for medical application
- 4. Distinguish between various rendering techniques on medical images
- 5. Assess the effect of image registration with respect to clinical application
- 6. Discuss the techniques for reconstruction of CT images

**Module 1: Image Representation: (7 Hours)** Pixels and voxels, gray scale and color representation, image file formats, DICOM, other formats- intensity transform functions, and the dynamic range, windowing, histogram and histogram operations, dithering and depth, filtering and Fourier transform.

**Module 2: Segmentation: (8 Hours)** The segmentation problem, Region of interest and centroid, theresholding, region growing, sophisticated segmentation methods, morphological operations, evaluation of segmentation results-Clinical applications.

**Module 3: Spatial Transforms: (7 Hours)** Discretization, interpolation and volume regularization, translation and rotation, reformatting, tracking and image guided therapy

Module 4: Rendering And Surface Models: (8 Hours) Visualization, orthogonal and perspective projection, and their view point, raycasting, surface based rendering-Clinical applications.

**Module 5: Registration:** (7 Hours) Fusing information, registration paradigm, merit functions, optimization strategies-camera calibration, registration to physical space-evaluation of registration results - Clinical applications.

**Module 6: CT Reconstruction: (8 Hours)** Introduction-Radon transform-algebraic reconstruction-Fourier transform and filtering-filtered back projection-Clinical applications.

18BM3004	ADVANCED HEALTHCARE SYSTEM DESIGN	L	Т	Р	С	
1001/13004	ADVANCED REALINCAKE SISIEVI DESIGN	3	0	0	3	

### **Course Objectives:**

The student should be made to:

- 1. Understand the needs for wearable devices and the technology
- 2. Learn the concepts in digital health care and digital hospitals
- 3. Apply the tools in design, testing and developing digital health care equipment

### **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the available technology for wearable healthcare devices
- 2. Interpret the need for digital methods of handling medical records
- 3. Modify the tools and methods for work flow
- 4. Compare various standards for inter-operability of devices
- 5. Decide quality and safety standards for developing healthcare systems
- 6. Formulate advanced strategies for innovation to societal needs.

**Module 1: Wearable Devices And M-Health Care: (7 Hours)** Introduction to mobile health caredevices-economy-average length of stay in hospital, outpatient care, health care costs, mobile phones, 4G, smart devices, wearable devices, Uptake of e-health and m-health technologies. Standards, system Design and case study.

**Module 2: Digital Radiology: (8 Hours)** Digital radiology for digital hospital, picture archiving and communication, system integration, digital history of radiology, medical image archives, storage and networks.

**Module 3: E-Health: (7 Hours)** Health care networking, Medical reporting using speech recognition, physiological tests and functional diagnosis with digital methods, tele-consultation in medicine and radiology.

Module 4: Modality: (8 Hours) Multimodality registration in daily clinical practice. Mobile healthcare. Case study.

**Module 5: Digital Health: (7 Hours)** Requirements and best practices, Laws and regulations in Digital health, Ethical issues, barriers and strategies for innovation.

Module 6: Standards For Inter Operability: (8 Hours) Selection and Implementation in e-Health project, design of medical equipments based on user needs. Security and privacy in digital health care.

# CLINICAL INSTRUMENTATION LABORATORY

L

0

# Course objectives

18BM3005

The student should be made:

- 1. To enable the students to know about the measurements and recording of Bioelectric and Bio Chemical Signals.
- 2. To work with signal interface for monitoring
- 3. To study the different preamplifiers used for amplifying the Bio Signals

# **Course Outcomes:**

Upon completion of the course, the student should be able to:

- 1. Demonstrate the design of biosignal amplifiers
- 2. Identify the interfacing methodology
- 3. Analyse the signal by feature extraction
- 4. Experiment the physiological parameters and its effects
- 5. Indicate the functions of surgical equipments
- 6. Perform biochemical measurements

# LIST OF EXPERIMENTS

- 1. Operational Amplifier-various amplifier configurations
- 2. Study of Timer circuit, Study of FSK modulation and demodulation
- 3. Design and testing of Bio-Amplifiers
- 4. Record and analyze the ECG signal
- 5. Record and analyze the EMG signal.
- 6. Record and analyze the EEG signal.
- 7. Record and analyze the PPG signal.
- 8. Recording of various physiological parameters using patient monitoring system
- 9. Study and analysis of functioning and safety aspects of surgical diathermy
- 10. Study and analysis of functioning of ultrasound imaging scanner
- 11. Respiration rate measurement using spirometer
- 12. Blood count measurement using blood cell counter
- 13. Blood pH measurement using pH meter
- 14. Bio-chemical measurements

1001/2004	DIOCENCODO AND MEMO I ADODATODY	L	Т	Р	С	
18BM3006	BIOSENSORS AND MEMS LABORATORY	0	0	4	2	

# **Course Objectives:**

The student should be made to:

- 1. Acquire, record, analyze MEMS sensors for specific applications
- 2. Study the design of micro devices, fabrication and testing methods
- 3. Impart knowledge about the application development

# **Course Outcomes:**

At the end of this course, students will be able to

- 1. Examine the functions, performance of MEMS sensors in medical applications
- 2. Classify the methods in thin film and 3D printing process.
- 3. Illustrate the appropriate design standards and constrains
- 4. Experiment the performance of sensors in simulation tools
- 5. Assess the functions of new microsensors and test the performance.
- 6. Integrate the MEMS sensors for developing medical applications.

# LIST OF EXPERIMENTS

- 1. Design, selection and testing the performance of microsensor for medical applications
- 2. Design, selection and testing the performance of biochemical sensor
- 3. Design and testing the performance of strain sensor for biomechanics applications
- 4. Design and testing the performance of angle sensor for biomechanics applications
- 5. Study the methodologies of PVD and CVD process for developing medical application
- 6. Study the methodology of thin film process and develop medical application
- 7. Testing of thin film devices using, XRD, optical, electrical and SEM.
- 8. Fabrication and testing of 3D bioprint models for prosthetics and implants
- 9. Design of MEMS device and analysis using simulation tools Comsol, MatLab
- 10. System integration for biomedical application for human Gait analysis.

# 18BM3007 MEDICAL IMAGE PROCESSING LABORATORY

# Course objectives

The student should be made to:

- 1. Work with various medical image data
- 2. Have experience in MatLab for image processing
- 3. Process medical images using various methods

# **Course Outcomes:**

Upon completion of the course, the student should be able to:

- 1. Demonstrate the manipulation of images for the specified requirement
- 2. Identify the region of interest using segmentation and morphological operations
- 3. Modify the image geometry for specific purpose
- 4. Show the effect of rending on given image
- 5. Indicate the results of fusion and registration of images
- 6. Demonstrate image reconstruction using the given data

# List of Experiments:

- 13. Basic operations on medical images
- 14. Enhancement of medical images
- 15. Image segmentation using thresholding and region based methods
- 16. Morphological operations on medical images
- 17. Translation and rotation of medical images
- 18. Image reformatting and tracking
- 19. Volume rendering
- 20. Surface rendering
- 21. Methods for medical image fusion
- 22. Image registration methods
- 23. Radon Transform
- 24. Image reconstruction

18BM3008	HOSPITAL TRAINING	L	Т	Р	С	
1001013000	nostiial ikaining	0	0	4	2	

# Course objectives

The student should be made to:

- 1. Work and testing of various medical equipments
- 2. Have experience in hospital work environment
- 3. Assess various methods of quality in medical devices

# **Course Outcomes:**

Upon completion of the course, the student should be able to:

- 1. Demonstrate the functions of medical equipments
- 2. Identify the specifications, operating procedure, and maintenance log
- 3. Modify the applications for specific purpose
- 4. Experiment the effect of human factors on design of medical devices
- 5. Access the regulations, standards and certification of devices
- 6. Integrate the functions, analyse the data and develop methodologies

# List of Experiments:

- 1. Study and testing of the instruments for vital sign monitoring
- 2. Study and testing of the instruments for respiration monitoring
- 3. Study and testing of the anesthesia machine
- 4. Study and testing of the instruments for post operative care
- 5. Study and testing of the equipments in ICU, ICCU, HDU, NICU
- 6. Study and testing of the equipments in operation theatre
- 7. Study and testing of the equipments for minimally access surgery
- 8. Study and testing of the equipments in dentistry
- 9. Study and testing of the equipments in urology
- 10. Study and testing of the equipments for chemotherapy
- 11. Study and testing of the equipments for physiotherapy
- 12. Study and testing of the equipments for podiatry
- 13. Study on Equipments for waste handling and regulations

- 14. Study on quality standards, medical record and certification
- 15. Handling of power sources, water and general maintenance practices

18BM3009	MEDICAL SENSORS AND MEMS TECHNOLOGY	L	Т	Р	С	
10D1015009	MEDICAL SENSORS AND MEMIS TECHNOLOGI	3	0	0	3	

### **Course Objectives:**

The student should be made to:

- 1. Understand the in depth and quantitative view of medical sensors and its characteristics
- 2. Knowledge of the current state of the art to micro sensor fabrication methods
- 3. Apply the tools to design and development of sensors for the medical applications

### **Course Outcome:**

At the end of this course, students will be able to

- 1. Identify the principle of medical sensors and its interfacing circuits
- 2. Classify the micro sensor materials, synthesis, fabrication and its characterization
- 3. Choose the design tools to test and develop products to required specifications
- 4. Infer the most relevant challenges facing in the fabrication process
- 5. Judge a sensor based on standard performance criteria and environmental impact
- 6. Construct the micro system for appropriateness for an application and user.

Module 1: Classification Of Medical Sensors: (7 Hours) Sensors for Pressure Measurement-Sensors for Motion and Force Measurement- Sensors for Flow Measurement -Temperature Measurement- Sensors for speed, torque, vibration- smart sensors, design of interface system.

**Module 2: Microsystem Design**: (8 **Hours**) Technological Breakthrough, Dielectrics for Use in MEMS Applications, Piezoelectric Thin Films for MEMS Applications, Modeling of Piezoelectric MEMS, Interface Circuits for Capacitive MEMS Gyroscope, Advanced MEMS Technologies for Tactile Sensing and Actuation, MEMS-Based Micro Hot-Plate Devices, Inertial Sensor. Design of microsystem for sensing and control. Case study.

**Module 3: Material For MEMS And NEMS: (7 Hours)** Working principle of Microsystems, materials for MEMS and Microsystems, micromachining, System modeling, Properties of materials, Synthesis, selection and characteristics of materials.

**Module 4: Fabrication Methods: (8 Hours)** Clean room, microfabrication methods, Lithography, epitaxy, sputtering, deposition, surface and bulk micromachining. Case study.

**Module 5: Microsensors And Actuators: (7 Hours)** Mechanical sensors and actuators – beam and cantilever, piezoelectric materials, thermal sensors and actuators- micromachined thermocouple probe, Peltier effect, heat pumps, thermal flow sensors, micro gripper microlens, microneedle, micropumps-Testing of the performance using software tools.

Module 6: Software Tools: (8 Hours) Modeling and design, using MatLab, Design of sensors, pressure sensor, vibration sensor, actuators Analysis using solvers, MatLab, Comsol, mechanical solver, electrical solver.

10D1013010	HOWAN COWI OTEK INTERFACE	3	0	0	3

# Course objectives:

The student should be made to:

- 1. Understand the fundamentals of EEG signal acquisition techniques
- 2. Learn the feature extraction methods

# 3. Design EEG based robotic application

# **Course outcomes**:

At the end of this course, students will be able to

- 1. Identify the data acquisition methods for EEG signal
- 2. Classify the types of signals and its components
- 3. Choose the design tools to develop simulation models
- 4. Classify the signals to develop the applications
- 5. Assess the systems based on the design specifications
- 6. Construct the applications for medical diagnosis and robots

**Module 1: Human Computer Interaction: (7 Hours)** Introduction to theories within cognitive and perceptual psychology, human decision making and actions in computer supported situations. Design and construction, Interaction between human and computerized technical systems.

**Module 2: Introduction To Brain Computer Interfaces:** (8 Hours) Concept of BCI, Invasive and Non-invasive Types, EEG Standards, Signal Features, Spectral Components, EEG Data Acquisition, Pre-processing, Hardware and Software, Artifacts, Methods to Remove, Near Infrared BCI.

**Module 3: BCI Approaches**: (7 **Hours**) Movement Related EEG Potentials, Mental States, Visual Evoked Potential. P300 virtual platform.

**Module 4: EEG Feature Extraction Methods: (8 Hours)** Time/Space Methods, Fourier Transform, Wavelets, AR models, Band pass filtering, PCA, Laplacian Filters, Linear and Non-linear Features.

**Module 5: EEG Feature Translation Methods:** (7 Hours) LDA, Regression, Memory Based Vector Quantization, Gaussian Mixture Modeling, Hidden Markov Modeling.

**Module 6: BCI Controlled Robots:** (8 **Hours**) Case Study of Problems in BCI, Case Study of Brain Actuated Control applications.

18BM3011	HUMAN ASSIST DEVICES	L	Т	Р	С
	HUMAN ASSIST DE VICES	3	0	0	C 3

# Course Objective:

The student should be made to:

- 1. Introduce the Fundamental terms and concepts of human assist devices
- 2. Learn various assist device functions and characteristics.
- 3. Apply design tools for modeling and analysis of assist devices

# **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the requirements for human assist devices
- 2. Classify the systems based on applications
- 3. Relate soft tools for analysis and design of devices for specific applications
- 4. Infer the merits of human assist system and its influence to environment.
- 5. Choose the methodologies in measurement systems and conditions
- 6. Combine instrumentation techniques for development of assist devices to human needs

**Module 1: Heart Lung Machine And Artificial Heart**: (7 **Hours**) Condition to be satisfied by the H/L System. Different types of Oxygenators, Pumps, Pulsatile and Continuous Types, Monitoring Process, Shunting, The Indication for Cardiac Transplant, Driving Mechanism, Blood Handling System, Functioning and different types of Artificial Heart, Mock test setup for assessing its Functions.

**Module 2: Cardiac Assist Devices**: (8 **Hours**) Synchronous Counter pulsation, Assisted through Respiration Right Ventricular Bypass Pump, Left Ventricular Bypass Pump, Open Chest and closed Chest type, Intra Aortic Balloon Pumping, Arterial Pumping, Prosthetic Cardio Valves, Principle and problem, Biomaterials for implantable purposes, its characteristics and testing. Case study.

**Module 3: Artificial Kidney**: (7 **Hours**) Indication and Principle of Hemodialysers, Membrane, Dialysate, Different types of hemodialysers, Monitoring Systems, Wearable Artificial Kidney, Implanting Type- Modeling and analysis. Case study.

**Module 4: Prosthetic And Orthodic Devices: (8 Hours)** Hand and Arm Replacement - Different Types of Models Externally Powered Limb Prosthesis Feedback in Orthodic System, Functional Electrical Stimulation, Haptic Devices

**Module 5: Respiratory And Hearing Aids:** (7 **Hours**) Intermittent positive pressure, Breathing Apparatus Operating Sequence, Electronic IPPB unit with monitoring for all respiratory parameters. Types of Deafness, Hearing Aids- Construction and Functional Characteristics.

**Module 6: Sensory Augmentation And Substitutions: (8 Hours)** Classification of Visual Impairments, Prevention and cure of visual impairments, Visual Augmentation, Tactile vision substitution, auditory substitution and augmentation, tactile auditory substitution, Assistive devices for the visual impaired

18BM3012	COGNITIVE TECHNOLOGY FOR BIOMEDICAL	L	Т	Р	С
	ENGINEERS	3	0	0	3

# **Course objectives**

The student should be made to:

- 1. Learn the various soft computing frame works
- 2. Be familiar with design of various neural networks and fuzzy logic
- 3. Learn genetic programming and hybrid systems

### **Course Outcomes:**

Upon completion of the course, the student should be able to:

- 1. Identify various soft computing frame works
- 2. Interpret various neural networks and fuzzy logic methods
- 3. Relate genetic programming and hybrid soft computing
- 4. Select computing techniques for biomedical applications
- 5. Assess hybrid techniques
- 6. Design diagnostic and therapeutic methods

**Module 1: Introduction To Artificial Neural Networks: (7 Hours)** Characteristics- learning methods – taxonomy – Evolution of neural networks- McCulloch-Pitts neuron - linear separability - Hebb network - supervised learning network: perceptron networks - adaptive linear neuron, multiple adaptive linear neuron.

**Module 2: Types Of Neural Networks:(8 Hours)** BPN, RBF, TDNN- associative memory network: auto-associative memory network, hetero-associative memory network, BAM, hopfield networks, iterative autoassociative memory network & iterative associative memory network – unsupervised learning networks: Kohonen self organizing feature maps, LVQ – CP networks, ART network. Case studies on biomedical applications.

**Module 3: Fuzzy Logic: (7 Hours)** Membership functions: features, fuzzification, methods of membership value assignments- Defuzzification: lambda cuts - methods - fuzzy arithmetic and fuzzy measures: fuzzy arithmetic - extension principle - fuzzy measures - formation of rules-decomposition of rules, fuzzy inference systems-overview of fuzzy expert system-fuzzy decision making. Case studies on biomedical applications.

**Module 4: Genetic Algorithm: (8 Hours)** Genetic algorithm and search space - general genetic algorithm, operators - Generational cycle, stopping condition, constraints. Classification, genetic programming, multilevel optimization, real life problem, Advances in GA. Case studies on biomedical applications.

**Module 5: Hybrid Soft Computing Techniques: (7 Hours)** Neuro-fuzzy hybrid systems - genetic neuro hybrid systems - genetic fuzzy hybrid and fuzzy genetic hybrid systems - simplified fuzzy ARTMAP. Case studies on biomedical applications.

**Module 6: Applications**: (8 Hours) A fusion approach of multispectral images with SAR, optimization of traveling salesman problem using genetic algorithm approach, soft computing based hybrid fuzzy controllers. Case studies on biomedical applications.

18BM3013	FINITE ELEMENT METHODS FOR BIOMEDICAL	L	Т	Р	С
	ENGINEERS	3	0	0	3

# **Course Objectives:**

The students should be made to:

- 1. Understand the concepts of finite element methods for biomechanical analysis
- 2. Study beam elements and scalar problem in two dimension
- 3. Create applications to field problems

### **Course Outcomes:**

At the end of this course, the students should be able to:

- 1. Define finite element formulation
- 2. Identify boundary conditions and mesh elements
- 3. Relate finite element analysis in biomechanical research
- 4. Select the tools and develop the models
- 5. Assess the models and observe the performance
- 6. Create physiological model for biomedical applications

# Module 1: Introduction To Modeling: (7 Hours)

Historical Background, Mathematical Modeling of field problems in Engineering, Governing

Equations, Natural and Essential Boundary conditions - Basic concepts of the Finite Element Method. One Dimensional Second Order Equations, Discretization, element types- Linear and Higher order Elements Derivation of Shape functions and Stiffness matrices and force vectors Assembly of Matrices - solution of problems from solid and bio mechanics- Structural, stress, and strain analysis of the human body and/or artificial implants.

# Module 2: Beam Elements And Scalar Problem In Two Dimention (8 Hours)

Fourth Order Beam Equation Transverse deflections - Natural frequencies of beams and

Longitudinal vibration. Second Order 2D Equations involving Scalar Variable Variational formulation Finite Element formulation Triangular elements Shape functions and element matrices and vectors. Application to Field Problems in Bio mechanics, Quadrilateral elements.

### Module 3: Applications To Field Problems: (7 Hours)

Higher order elements. Natural co-ordinate systems Isoparametric elements Shape functions for isoparametric elements One, two and three dimensions Serendipity elements Numerical integration and application to plane stress problems transformation in coordinates- Jacobian of transformation-order of convergence- numerical integration example problems- shape functions in natural coordinates- rectangular elements- Lagrange family- Serendipity family rectangular prisms-tetrahedral elements.

# Module 4: Isoparametric Formulation And Miscellaneous Topics (8 Hours)

Introduction to elasticity equations stress strain relations plane problems of elasticity element

equations Plane stress, plane strain and axisymmetric problems stress-strain-time or constitutive equations for soft connective tissue components Modelling and force analysis of musculoskeletal systems Stress calculations

# Module 5: Non-Linear Analysis (7 Hours)

Introduction to Non-linear problems - some solution methods- computational procedure- simple material nonlinearity, stress stiffening, contact interfaces- problems of gaps and contact- geometric non-linearity- modeling considerations.

**Module 6: Impact Analysis: (8 Hours)** Mechanical properties of biological and commonly used biomedical engineering materials - Critical reviews of finite element analysis in biomechanical research.

### **Reference Books:**

18BM3014 REHABILITATION ENGINEERING	L	Т	Р	С		
10D1013014	<b>KEHADILI IA HUN ENGINEEKING</b>	3	0	0	3	

### **Course Objectives:**

The student should be made to:

- 1. Know about various types of disability and its rehabilitation models
- 2. Understand the integration of sensor and actuators to combat disability
- 3. Build rehabilitation robots for training and applications in rehabilitation

### **Course Outcomes:**

At the end of this course, students will be able to

- 1. Describe the basic terminology in rehabilitation and models for societal applications
- 2. Classify the sensors and actuators for particular applications.
- 3. Discover the new methodology and systems for societal needs related to disability
- 4. Compare the devices and methods under various environmental conditions
- 5. Criticize the design, performance, cost, user need and affordability
- 6. Develop the products based on cost effectiveness, user needs, environment friendly

**Module 1: Introduction To Rehabilitation: (7 Hours)** Introduction, models, Health, disability, quality of life, Safety standards, Community based rehabilitation, independence, mobility, reforms.

Module 2: Transducer And Actuators For Rehabilitation: (8 Hours) Linear and Angular displacement transducer, velocity Strain, Force measurement, Motion sensor-accelerometer, Proximity sensor, optical encoder Electrical actuators for rehabilitation, electromechanical mechanism, Pneumatic actuators, Hydraulic actuators.

Module 3: Technology And Disability: (7 Hours) Design of upper limb, Design of lower limb, prosthetics design, and design parameters.

**Module 4: Robots In Rehabilitation**: (8 **Hours**) Physiology basics of neuromotor recovery, neurorehabilitation, robots assisted rehabilitation therapy, actuator design methods and controllers. Exoskeleton applications for upper and lower limb. rehabilitation robotics, Mobility and navigation.

**Module 5: Rehabilitation Training And Assessment:** (7 Hours) Assessment methods, computational models, interactive training, software tools, Personal and patient transportation system, Design of Smart wheel chair, Gait training, wearable robotic systems, robots in activities for daily living.

Module 6: Control Of Exoskeleton: (8 Hours) EMG based controls. Modeling, simulation and control of exoskeleton.

18BM3015	MACHINE LEARNING	L	Т	Р	С	
10DW13015	WACHINE LEAKINING	3	0	0	3	

#### **Course Objective**

The student should be made to:

- 1. Learn the concept of machine learning.
- 2. Analyse recent advances in machine learning algorithms
- 3. Explore supervised and unsupervised learning paradigms towards applications

#### **Course Outcomes**

After completion of course, students would be able to:

- 1. Describe features that can be used for a particular machine learning approach
- 2. Classify contrast pros and cons of various machine learning techniques
- 3. Illustrate various methods for developing the application
- 4. Infer various machine learning approaches and paradigms.
- 5. Choose the methods towards challenges
- 6. Create solution to human problems in healthcare domain

**Module 1: Supervised Learning: (7 Hours)** Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes Linear models: Linear Regression, Logistic Regression, Generalized Linear Models Support Vector Machines, Nonlinearity and Kernel Methods-Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

**Module 2: Unsupervised Learning: (8 Hours)** Clustering: K-means/Kernel K-means, Dimensionality Reduction: PCA and kernel PCA, Matrix Factorization and Matrix Completion, Generative Models (mixture models and latent factor models)

**Module 3: Evaluating Algorithms: (7 Hours)** Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods, Boosting, Bagging, Random Forests.

**Module 4: Sparse Modeling And Estimation:** (8 Hours) Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning.

**Module 5: Scalable Machine Learning**: (7 **Hours**) Online and Distributed Learning, A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference

**Module 6: Recent Trends:** (8 **Hours**) Various learning techniques of Machine Learning and classification methods for IoMT applications. Various models for IoMT, and applications.

		3	0	0	3

#### **Course objectives:**

The student should be made to:

- 1. Understand the fundamentals of robotics and its degree of freedom
- 2. Learn the various sensor and actuators required for its functions
- 3. Apply the machine learning concepts in medical applications

### **Course outcomes:**

At the end of this course, students will be able to

- 1. Identify the fundamental concepts in robotic systems
- 2. Interpret the types of sensors and actuators for its applications
- 3. Choose the design tools to develop artificial intelligence techniques
- 4. Classify the conditions required for testing and control of autonomous robots
- 5. Judge the safety aspects to human and environment
- 6. Construct the robots for assisting in surgery

**Module 1: Introduction To Robotics**: (7 **Hours**) Degrees of freedom, path planning, Lagrange equation of motion, kinetics, payload, Links and Joints.

**Module 2: Sensors And Actuators**: (8 **Hours**) Gripper, tactile sensor, Sensor for vision and motion, proximity switches, controllers. Path planning, path tracking.

**Module 3: Programmable Controller:** (7 **Hours**) Artificial intelligence, machine vision, design of controllers based on embedded system, feedback control design. Human machine interface. Case studies

**Module 4: Human-Robot Interaction:** (8 **Hours**) Human factors: perception, motor skills, social aspect of interaction, safety, Haptic robots, collision detection, autonomous robots.

**Module 5: Medical Robotics**: (7 **Hours**) surgical robotics, robot supported diagnostics, micro-robots, nanorobots at the cell level, Robots in medical applications. case study.

**Module 6: Surgical Robot:** (8 **Hours**) Configuration, kinematics and workspace, design of intraocular robot surgery, Laparoscopic robotic surgery, applications of smart materials. Case study.

18BM3017	IELENEALIN IECHNOLOGI	3	0	0	3	

## **Course Objectives:**

The student should be made to:

- 1. Introduce the concept of telemedicine
- 2. Understand the Benefits and Limitations of Telemedicine.
- 3. Know Security and Standards and their use in Telemedicine Applications

#### **Course Outcomes:**

At the end of this course, students will be able to

- 1. Justify the need of telemedicine
- 2. Comprehend the various types of information
- 3. Realize the various data acquisition and storage system
- 4. Describe the issues in data handling and strategic Planning
- 5. Describe the role of Internet in telemedicine
- 6. Apply telemedicine in different fields like cardiology, oncology, pathology etc.

**Module 1: Introduction To Telemedicine:** (7 **Hours**) Data types, Data acquisition Systems, Display Systems, Data Storage Systems, Communication Networks.

Module 2: Multimedia Data Exchange And Telemedicine Quality Control: (8) Networking Architecture, Protocol Hierarchies for Multimedia communication, Media Coding.

**Module 3: Internet In Telehealth Care: (7 Hours)** Security, Quality of Service, Personal Communication, Medical Data Sharing, Telemedicine Needs, E-mail applications, World Wide Web, Teleworking, Teleteaching, Organizational Environment – Teleworking design and development.

Module 4: Data Handling: (8 Hours) Data security and privacy, Mechanism of security, Security on Internet, security and legal issues, Liability and legal aspects, Main Deontological applications, Contract scenarios, legal protection.

**Module 5: Planning And Other Social Aspects: (7 Hours)** Constraints for use of telehealth care, Costs/benefits, Planning for implementation, Forces affecting technology transfer, Scenarios for technology transfer, Technology transfer requirements, Strategy of telehealth care.

**Module 6: Healthcare Applications: (8 Hours)** Teleradiology, Telepathology, Telecytology, Telecardiology, Teleoncology, Teledermatology, Tele-Home care, Telesurgery Telepsychiatry, Primary Care, Telephonic Medicine.

18BM3018	HOSDITAL AND FOLIDMENT MANACEMENT	L	Т	Р	С
1001013010	HOSPITAL AND EQUIPMENT MANAGEMENT	3	0	0	3

# **Course objectives:**

The student should be made to:

- 1. Understand the fundamentals of health care delivery services
- 2. Learn the procedures in maintenance of equipments
- 3. Apply the design principles in engineering systems

# **Course outcomes**:

At the end of this course, students will be able to

- 1. Identify the principle of organizational structures and regulatory services
- 2. Classify the types of codes followed and applications
- 3. Modify the design to develop support systems
- 4. Infer the most challenges in environment and market trends
- 5. Evaluate the systems based on the safety criteria to environment
- 6. Create the methodology for new equipments to user needs

**Module 1: Health And Hospital Management: (7 Hours)** Health organisation of the country, the State, the Cities and the Region, Management of Hospital Organisation, Nursing Sector, Medical Sector, Central Services, Technical Department, Definition and Practice of Management by Objective, Transactional Analysis Human Relation in Hospital, Importance of Team Work, Legal aspect in Hospital Management. Case study: Health survey.

**Module 2: Regulatory And Voluntary Guidelines And Health Care Codes: (8 Hours)** FDA Regulation, Joint Commission of Accreditation for Hospitals, National Fire Protection Association Standard, ISO, NABL, ISO:13485, ISO:14791, risk management, Environmental regulation. Case study on risk management.

**Module 3: Healthcare Supply Chain Management:** (7 Hours) Essentials of healthcare supply chain management, designing sustainable health care supply chain, performance metrics, emerging trends in healthcare supply chain management.

**Module 4: Clinical Engineering: (8 Hours)** Role to be performed in Hospital, Manpower & Market, Professional Registration, Maintenance of Hospital support system, surveillance network, electric power management, Medical gas production, waste disposal, inventory control. Case study: RF ID tag for inventory.

**Module 5: Safety Equipments**: (7 **Hours**) Operation of safety devices, personnel safety equipments, Gas mask, Radiation measurements, equipment safety systems, elements of basic first aid, fire fighting, Case study: Safety Awareness.

**Module 6: Equipment Maintenance Management: (8 Hours)** Organizing the maintenance operation, biomedical equipment procurement procedure, proper selection, compatibility, testing and installation, purchase and contract procedure, trained medical staff, on proper use of equipment and operating instructions. Maintenance of job planning, preventive maintenance, maintenance budgeting, contract maintenance.

18BM3019	PHYSIOLOGICAL CONTROL SYSTEM	L	Т	Р	С	
10D1013013	I II I SIOLOGICAL CONTROL SI SI LIVI	3	0	0	3	

## **Course Objectives:**

The student should be made to:

- 1. Learn the modeling techniques of physiological systems.
- 2. Understand physiology and control techniques
- 3. Study the various regulatory systems of the human body.

# **Course Outcomes:**

At the end of this course, students will be able to

- 1. Describe the concepts of modeling and simulation
- 2. Differentiate characteristics of physiological systems
- 3. Show various concepts of biofeedback methods
- 4. Categorize adaptive and learning techniques
- 5. Criticize various control methodology for medical device applications
- 6. Design the biomedical systems useful for community

# Module 1: Modeling Of Physiological Systems: (7 Hours)

Systems Analysis, examples of physiological control systems, differences between engineering and physiological control systems. Generalized system properties, mathematical approach, electrical analogs, linear models, lung mechanics, muscle mechanics, distributed parameter versus lumped parameter models

# Module 2: Analysis of Physiological Models (8 Hours)

Static and dynamic analysis of physiological systems: regulation of cardiac output, blood glucose regulation, chemical regulation of ventilation, electrical model of neural control mechanism, sleep apnea, respiration.

# Module 3: Biofeedback In Physiological System (7 Hours)

Circulatory System: respiration system, cardiovascular measurements, EEG and EMG, Pupil reflux. Blood pressure, heart rate. Case study.

Module 4: Stability Analysis: (5 Hours) Routh-Hurwitz, Root locus, Lyapnov methods.

**Module 5: Control Techniques**: (10 **Hours**) Introduction to adaptive control, Direct and indirect adaptive control, Model reference adaptive control, Parameter convergence, Persistence of excitation Adaptive back stepping, Adaptive control of nonlinear systems, Composite adaptation. Case study.

**Module 6: Advanced Controllers**: (8 **Hours**) Robust adaptive control Neural Network-based control Reinforcement learning-based control, Repetitive learning control, Predictive control, Robust adaptive control.

18BM3020	ERGONOMICS IN HOSPITAL	L	Т	Р	С
10D1013020	EKGONOWICS IN HOSFITAL	3	0	0	3

# **Course Objectives:**

The student should be made to:

- 1. Introduce the Fundamental terms and concepts of human factors
- 2. Learn principles and optimize human well-being and overall performance.
- 3. Apply methodology for human stress related issues in hospital work area.

#### **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the problems in posture and work efficiency
- 2. Classify the workspace and related systems
- 3. Choose signal processing techniques for analysis and feature extraction.
- 4. Relate the anthropometric concepts to human system and environment.
- 5. Assess the methodologies in measurement systems and conditions
- 6. Construct instrumentation techniques for development of user friendly systems

**Module 1: Ergonomics In Healthcare**: (7 **Hours**) Human factors and ergonomics in health care, ergonomic challenges in patient safety, work system design in healthcare, effect of workplace on healthcare workers, healthcare work schedule. Human error in healthcare, error reduction strategies.

**Module 2: Human–Machine System: (8 Hours)** Human machine interaction, human technological system, manual, mechanical, automated system, human system reliability, human system modeling, Human Output And Control, material handling, motor skill, human control of systems, controls and data entry devices, hand tools and devices,

**Module 3: Workplace Design: (7 Hours)** Applied anthropometry, workspace design and seating, design of computer worktable, case studies. Physical environment in healthcare. Environmental conditions. Workplace design.

**Module 4: Measurement System: (8 Hours) Physical stress and fatigue measurement using EMG and EEG.** Assessment and evaluation tools for musculoskeletal disorder and patient handling techniques. Design of assessment system: Case study.

**Module 5: Ergonomics Methodologies: (7 Hours)** Cognitive work analysis in healthcare, risk management for medical products, analysis of workflow, simulation based trainings, Information technology design and development, programmes and implementation models, patient safety and ergonomics for patient safety.

**Module 6: Ergonomics Applications In Hospital**: (8 **Hours**) Human factors and ergonomics in ICU, emergency department, pediatrics, home care, primary care, anesthesia, medication safety, infection prevention, surgical excellence. Case study.

18BM3021	MEDICAL ETHICS AND SAFETY	L	Т	Р	С	
10D1015021	MEDICAL ETHICS AND SAFETY	3	0	0	3	

# **Course Objectives:**

The student should be made to:

- 1. Provide a source of useful ideas, concepts, and techniques
- 2. Improve performance to avoid patient injury, achieving efficacious treatment
- 3. Reduce Medical error and controlling health care costs.

#### **Course Outcomes:**

At the end of this course, students will be able to

- 1. Identify the mechanical and electrical safety standards of medical equipment
- 2. Understand device specific safety goals
- 3. Interpret reasonable, acceptable and effective remedies and counter measure
- 4. Select the clinical suitability to the impact of the device on the environment
- 5. Device more reliable medical equipment incorporating safety goals
- 6. Combine new techniques for device management

**Module 1: Reliability And Safety Testing:** (7 **Hours**) Reliability – Types of reliability – Reliability optimization & assurance – Reliability's effect on medical devices – The concept of failure – Causes of failure – Types of Failures in Medical devices – Safety testing – Device specific safety goals,

Failure assessment and Documentation – Visual inspection: External & Internal visual inspection – Measurement – Safety parameters, Function test

**Module 2: Medical Devices Handling, Environmental Safety:** (8 Hours) Safe medical devices – Handling and operation – Medical Application safety – Usability – Clinical assessment – Environmental safety.

**Module 3: Electrical Safety:** (7 **Hours**) Safety Mechanics – Electrical Safety – Biological aspect – Limitation of Voltages - Macroshock and Microshock – Earth and Protection – Leakage currents – Magnetic fields and compatibility – Basic assumptions in safety technology – Safety classes.

**Module 4: Medical Devices Standards: (8 Hours)** Medical Standards and Regulations – Device classification – Registration and listing – Declaration of conformance to a recognized standard – Investigational Device Exemptions – Institutional Review Boards – IDE format – Good laboratory practices – Good manufacturing practices.

**Module 5: Ethical Theories & Moral Principles: (7 Hours)** Theories-Deontology& Utilitarianism, Casuist theory, Virtue theory, The Right Theory. Principles - Non-Maleficence, Beneficence, Autonomy, Veracity, Justice. Autonomy & Confidentiality issues in medical practice, Ethical Issues in biomedical research, Bioethical issues in Human Genetics & Reproductive Medicine.

**Module 6: Introduction To Medical Ethics: (8 Hours)** Definition of Medical ethics, Scope of ethics in medicine, American medical Association code of ethics, CMA code of ethics- Fundamental Responsibilities, The Doctor and the Patient, The Doctor and the Profession, Professional Independence, The Doctor and Society.

		I.	Т	Р	С
18BM3022	EMBEDDED SYSTEMS AND IOT IN HEALTH CARE	L	-	-	C
100113022	ENDEDDED STOTEMS AND INT IN HEALTH CARE	3	Ω	Ω	3

## **Course objective**

The student should be made to:

- 1. Teach the internet concepts and design methodology
- 2. Teach fundamentals of embedded system
- 3. Teach importance of embedded and IoT in health care.

#### **Course outcome:**

At the end of this course, students will be able to

- 1. Acquire the knowledge & concepts of IoT.
- 2. Explain the basic concepts of IoT Protocols.
- 3. Illustrate the concepts of embedded system for health care applications.
- 4. Categorize the importance of digital health
- 5. Criticize the ethical issues in health care
- 6. Develop an application based on IoT in health care

#### Module 1: Internet Concepts And Infrastructure: (7 Hours)

Broad Band Transmission facilities, Open Interconnection standards, Local Area Networks, Wide Area Networks, Network management, Network Security, Cluster computers. Internet concepts, Capabilities and limitations of the internet. Interfacing Internet server applications to corporate databases HTML and XML Web page design through programming and the use of active components.

**Module 2: Design Metholody And Protocols:** (8 Hours) Introduction, Characteristics, Physical design, Protocols, Logical design, Enabling technologies, IoT Levels, Domain Specific IoTs, IoT vs M2M. IOT design methodology, IoT systems management, IoT Design Methodology Specifications Integration and Application Development.

Module 3: Embedded Systems: (7 Hours) Generic Embedded Systems Structure- Components of Embedded Systems- Sensors and Actuators-importance of Analog/Digital Conversion- Embedded

system based physiological monitoring system- Health care innovations using embedded system. Evolution of digital health- challenges and opportunities of digital health- importance of digital health.

**Module 4: Ethical Issues In Health Care: (8 Hours)** Ethical implications of digital health technologies- privacy, confidentiality and security of personal health data-ethical framework and guidelines in digital health, principles of biomedical ethics.

# Module 5: IoT In Health Care Applications: (7 Hours)

IoT based health care- physiological parameter monitoring system- future challenges in health carehealth care echo system with IoT- IoT for personalized health care- wearable device characteristicsanalysis of power aware protocols.

Module 6: Standards For E-Health Applications: (8 Hours) Social network analysis in health care embedded health care system for senior resident using IoT.

18BM3023	NANO TECHNOLOGY AND APPLICATIONS	L	Т	Р	С	
10D1015025	NANO IECHNOLOGI AND AFFLICATIONS	3	0	0	3	

# **Course Objectives:**

The student should be made to:

- 1. To know basic nanotechnological principles and characterization methods
- 2. To understand the essential features of biology and nanotechnology
- 3. Create the new areas of bio nanotechnology and nanomedicine.

# **Course Outcomes:**

The student will be able to:

- 1. Define the newest findings in the area of nanomedicine
- 2. Classify the materials for nano therapeutics
- 3. Show the advanced methods of nano synthesis
- 4. Explain the characteristics of nanoparticles in diagnosis
- 5. Choose nanotechnology in appropriate medical applications
- 6. Implement the perspectives in own research

# Module 1: Introduction of Nanoparticles (7 Hours)

Overview of nanotechnology from medical perceptive, different types of nanobiomaterials and nanostructure interactions. Synthesis, characterization, and properties smart nanomaterials, Surface modification.

Module 2: Biofunctionalization Of Nanomaterials: (8 Hours) Nanocarriers, liposomes, polymer capsules, polymer nanoparticles.

**Module 3: Protein As Nanostructures: (7 Hours)** Protein based nanostructures building blocks and templates Proteins as transducers and amplifiers nanobioelectronic devices and polymer nanocontainers microbial production of inorganic nanoparticles magnetosomes.

**Module 4: DNA as nanostructures: (8 Hours)** DNA based nanostructures Topographic and Electrostatic properties of DNA Hybrid conjugates of gold nanoparticles DNA oligomers use of DNA molecules in nanomechanics

**Module 5: Nanoparticles In Diagnosis: (7 Hours)** Introduction to nanoparticles in diagnostics nuclear imaging, optical imaging, PET, Micro PET, cardio vascular disease studies, imaging and therapy of thrombosis, emerging Ethical issues and toxicology of nanomaterials.

Module 6: Nanotherapeutics: (8 Hours) Nanoparticles as carriers in drug delivery- design, manufacture and physiochemical properties, transport across biological barriers, nanotechnology in

Cancer therapy, lung infectious disease, bone treatment, nano particles for oral vaccination and skin disease.

# 18BM3024BIOMEDICAL ENGINEERING ENTREPRENEURSHIPLTPC3003

# Course Objectives

The student should be made to:

- 1. To learn fundamentals of entrepreneurship
- 2. To apply the methods of entrepreneurship in medical field
- 3. To evaluate the medical devices and market trends

# **Course Outcomes**

At the end of this course, students will be able to

- 1. Describe the role of biomedical engineers in entrepreneurship
- 2. Interpret the background for biomedical engineers in entrepreneurship
- 3. Acquire the skills and techniques required towards innovation
- 4. Categorize the resources and funding agencies
- 5. Judge the right product based on market needs
- **6.** Compile and quantify the opportunities and challenges

## Module 1: Scope For Biomedical Engineering Entrepreneurship: (7 Hours)

Fundamentals and models, Advancements in biomedical field, Supporting societies and professional activities. Impact of innovation in medical devices. Case study.

Module 2: Venture: (8 Hours) Assessing the venture, Establish venture invention, market research, presenting the business plan, case study.

**Module 3: Regulations:** (7 Hours) Certification, ISI, CE, UL, NABL and FDA regulations, ISO:13485, ISO:14791, risk management, Environmental regulation. Case study on risk management. Case study.

**Module 4: Identifying The Grants: (8 Hours)** Identify and organize support for product development, funding agencies, collaborative initiatives, and angel investors.

Module 5: Impact of Globalization: (7 Hours) Medical product manufacturing, marketing, leadership, quality management.

**Module 6: Environmental Awareness: (8 Hours)** Environmental regulations, safety, safe disposal, preventing pollution, preventing health hazards.

18BM3025	BUSINESS ANALYTICS	L	Т	Р	С	
10D1013023	DUSINESS ANALT TICS	3	0	0	3	

#### **Course objective**

The student should be made to:

- 1. Understand the role of business analytics
- 2. Analyze data using statistical and data mining techniques
- 3. Understand relationships underlying business processes of an organization

# **Course outcomes**

At the end of this course, students will be able to

- 1. Define the parameters data analytics
- 2. Interpret the use technical skills in modeling to support business decision-making
- 3. Relate the ability of data and deep analytics.
- 4. Translate data into clear, actionable insights and critical thinking
- 5. Understanding business analytics to formulate and solve business problems
- 6. Create and support managerial decision making.

**Module 1: Business Analytics:** (7 **Hours**) Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organisation, competitive advantages of Business Analytics. Statistical Tools, Statistical Notation, Descriptive statistical methods, Review of probability distribution and data modelling, sampling and estimation methods overview.

**Module 2: Trendiness And Regression Analysis:** (8 **Hours**) Modelling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

**Module 3: Organization Structures**: (7 **Hours**) Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes. Descriptive Analytics, predictive analytics, predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modelling, nonlinear Optimization.

**Module 4: Forecasting Techniques: (8 Hours)** Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models. Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

**Module 5: Decision Analysis:** (7 **Hours**) Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making.

**Module 6: Recent Trends**: (8 **Hours**) Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

18BM3025	ENERGY AUDITING AND MANAGEMENT FOR	L	Т	Р	С
18DIV13025	HOSPITAL	3	0	0	3

# **Course Objectives:**

Students will be able to:

- 1. Understand the need and concepts for energy auditing
- 2. Know about different audit instruments used in practice
- 3. Identify the energy sources and optimal utility of electrical energy

#### **Course Outcomes:**

At the end of this course, students will be able to:

- 1. Acquire the background required for engineers to meet the role of energy managers
- 2. Classify the techniques required to implement energy management
- 3. Identify and quantify the energy intensive business activities in a hospital
- 4. Perform Basic Energy Audit in an hospital complex
- 5. Identify the methods of alternate energy sources for hospitals
- 6. Construct the optimal utility concepts for efficient hospital systems

Module 1: Introduction To Energy Audit: (7 Hours) System Approach: End use approach to efficient use of Electricity, Electricity tariff types Energy auditing: Types and objectives - audit

instruments, ECO assessment and Economic methods, Specific energy analysis-Minimum energy paths-consumption models-Case study.

**Module 2: Energy Efficient Controls: (8 Hours)** Electric motors and starting efficiency-Motor Efficiency and Load Analysis Energy efficient /high efficient Motors-Case study Load Matching and selection of motors, Variable speed drives; Pumps and Fans-Efficient Control strategies-Optimal selection and sizing Optimal operation and Storage; Case study.

**Module 3: Transformer Loading/Efficiency Analysis**: (7 Hours) Feeder, cable loss evaluation, case study Reactive Power management-Capacitor, Sizing-Degree of Compensation-Capacitor losses Location-Placement, Maintenance. Case study.

**Module 4: Peak Demand Controls- Methodologies**: (8 **Hours**) Types of Industrial loads-Optimal Load, scheduling-case study, Lighting- Energy efficient light sources-Energy conservation in Lighting Schemes Electronic ballast-Power quality issues-Luminaries, case study.

**Module 5: Alternate Energy Sources For Hospitals**: (7 **Hours**) Diesel based Power generating units- Solar based power plants, solar panel, wind mill, power storage. Biomass plant, gasifier.

**Module 6: Cogeneration**: (8 **Hours**) Methods, and Schemes Optimal operation of cogeneration plants-case study Electric loads of Air conditioning &Refrigeration, Energy conservation measures-Cool storage, Types-Optimal operation. Case study.

# 17BM2001 HEALTH AND HOSPITAL MANAGEMENT

#### Credits: 3:0:0

#### **Course Objectives:**

- To understand the need and significance of Clinical Engineering and Health Policies.
- To familiarize the training strategies, quality management policies and information technology used in health care.
- To know the needs of managerial training to hospital staffs

#### **Course Outcomes:**

- Identify the role of the manager in healthcare and how organisations and people work within the healthcare system.
- Evaluate and use measurement tools for quality and safety.
- Describe how high quality services can best be designed, configured and delivered.
- Demonstrate a strategic leadership role as an advocate for improved healthcare delivery.
- Debate internal and external catalysts for quality and understand the core concepts of quality and safety.
- Apply the plans to manage people, finances and organisational resources.

**Unit I - Need and scopes of clinical engineering:** Clinical engineering program, Educational responsibilities, Role to be performed by them in hospital, Staff structure in hospital

**Unit II - National health policies:** Need for evolving health policy, Health organization in state, Health financing system, Health education, Health insurance, Health legislation.

**Unit III - Training and management of technical staff in hospital:** Difference between hospital and industrial organization, Levels of training, Steps of training, Developing Training program, Evaluation of training, Wages and salary, Employee appraisal method.

**Unit IV - Standards, codes and quality management in health care:** Quality management in hospitals and clinical laboratories, Necessity for standardization and Quality management, NABH and NABL standards, FDA, Joint Commission of Accreditation of hospitals, ICRP and other standard organization, Methods to monitor the standards, Overview of Medical Device regulation and regulatory agencies.

**Unit V - Computers and information technology in medicine and Healthcare:** Computer application in ICU, Picture Archival System (PACS) for Radiological images department, Clinical laboratory administration, Patient data and medical records, Communication, Simulation

#### **Reference Books**

#### 17BM2002 BIOMEDICAL SENSORS AND TRANSDUCERS

#### Credits: 3:0:0

#### **Course Objectives:**

- To provide introduction to the field of medical sensors and an in depth and quantitative view of device design and performance analysis.
- To provide knowledge on the principle and operation of different medical transducers.
- To introduce the application of sensors and transducers in the physiological parameter measuring system.

#### **Course Outcomes:**

- Identify the calibration procedure for the basic instruments involved in physiological parameter measurement.
- Interpret the errors in measurement by analyzing the performance characteristics of the sensors.
- Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- Apply the suitable design criteria for developing a medical sensor for a particular application.
- Develop advanced medical sensors based on the basic transduction principles.
- Predict the qualitative performance of advanced medical sensors.

**Unit I - Science of Measurement:** Generalized Instrumentation System, General Properties of Input Transducer. Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Error Free Instrument, Transfer Functions. Design Criteria, Generalized Instrument Specifications.

**Unit II - Different Transduction Principles:** Temperature transducers, thermo resistive transducers, thermoelectric, p-n junction, chemical thermometry. Displacement transducers, potentiometric, resistive strain gauges, inductive displacement, and capacitive displacement transducer. Pressure transducer, indirect method, measurement of blood pressure using sphygmomanometer, instrument based on Korotkoff sound, strain gauge and LVDT transducers, capacitive and piezo-electric type, catheter tip transducers, measurement of intracranial pressure, catheter tip, implantable type.

**Unit III - Biological Sensors:** Study of various corpuscles like Pacinian, functions and modelling, Chemoreceptor, hot and cold receptors, baro- receptors, sensors for smell, sound, vision, osmolality and taste. **Unit IV - Biosensors:** Introduction, Advantages and limitations, various components of Biosensors, Biocatalysts based biosensors, bio-affinity based biosensors & microorganisms based biosensors, biologically active material and analyte. Types of membranes used in biosensor constructions.

**Unit V - Bio potential Electrodes and Bio Chemical Sensors:** Electrodes Electrolyte Interface, Half-Cell Potential, Polarization, Polarizable and Non Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes. Ion exchange membrane, electrodes, oxygen electrodes,  $CO_2$  electrodes enzyme electrode, construction, ISFET for glucose, urea etc. Electrolytic sensors, optical sensor, fiber optic sensors. Biosensors in clinical chemistry, medicine and health care.

#### **Reference Books**

- 1. Medical Instrumentation-Application and Design by John G. Webster, 2013
- 2. Transducers for Biomedical Measurements: Principles and Applications, Richard S.C. Cobbold, John Wiley & Sons, 2004.
- 3. Electronics in Medicine and Biomedical Instrumentation by Nandini K. Jog PHI Second Edition 2013.
- 4. Instrument Transducer An Intro to their performance and design, Hermann K P. Neubert. 4. Biomedical sensors fundamentals and application by Harry N, Norton.
- 5. Biomedical Transducers and Instruments, Tatsuo Togawa, Toshiyo Tamma and P. Ake Öberg.

#### 17BM2003 BIOMEDICAL SENSORS AND TRANSDUCERS LABORATORY

Credits: 0:0:2

#### **Course Objectives:**

- To introduce the practical aspects of various medical transducers and their characteristics.
- To impart knowledge in measurement of Resistance, Inductance and Capacitance using bridges.
- To improve the skills in calibrating analog meters.

#### **Course Outcomes:**

- Understand the method of calibration of basic instruments.
- Analyze the performance characteristics of different sensors.
- Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
- Apply the suitable design criteria for developing a medical sensor for a particular application.
- Develop advanced medical sensors based on the basic transduction principles.

• Predict the qualitative performance of advanced medical sensors.

## **Description:**

This laboratory introduces the different biomedical transducers, their working and determination of their characteristics.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

# **17BM2004 MEDICAL ELECTRONICS**

# Course Objectives:

Credits: 3:0:0

- To furnish information on the mechanisms of current flow in semi-conductors.
- To yield understanding about the basic operations of diode, transistor and their medical applications.
- To provide knowledge about advanced semiconductor devices and their significant practical applications in medical field.

#### **Course Outcomes:**

- Identify various electronic medical equipments
- Generalize the amplifiers and semiconductor applications for biosignal acquisitions.
- Apply the concepts of electronic circuits to biomedical applications.
- Categorize various application of oscillators, pulse circuits etc.
- Design practical circuits for acquisition and analysis of biomedical signals.
- Build simple circuits for biomedical signal and analysis.

Unit I - Introduction to biomedical instrumentation: Overview of medical electronic equipments, types of medical equipments, transduction of bioelectric potentials, concepts of bio-impedance.

**Unit II - Introduction to semiconductor devices:** PN junction diodes-VI characteristics, rectifiers, power supply design, Zener diodes, Regulators, LED, LCD, Laser diodes, Special purpose diodes and their medical applications

**Unit III - BJT and its medical applications**: Construction, Characteristics, Hybrid model. Transistor as amplifier, Transistor as a switch, Opto-coupler & its medical application.

**Unit IV - Junction field effect transistor and its medical applications**: JFET, MOSFET and its classification, Power MOSFET, MOS as a charge transferring Device – CCD, Uni-junction transistor. Medical application of MOSFET.

**Unit V - Oscillators and other special purpose amplifiers**: Differential amplifiers: CM and DM, feedback amplifiers, Oscillators – LC, RC, crystal and their medical application, Pulse circuits for medical devices.

#### 17BM2005 BIO SIGNAL CONDITIONING CIRCUITS

# Credits: 3:0:0

#### Course Objectives:

- To understand bioelectric amplifiers
- To discuss filters and circuits
- To introduce application of signal conditioning in biomedical field

#### **Course Outcomes:**

- Identify the origin and characteristics of various biosignals and its acquisition.
- Identify the application of signal condition circuits for biomedical field.
- Recognize various bioamplifier for biosignal acquisitions using opamps.

- Analyze and deign bio filters and isolation circuits used in medical signal conditioning.
- Apply the concepts in designing various medical equipments using different ICs
- Interface bioelectric signals with embedded systems using digital interfaces.

**Unit I - Biopotentials and bioelectric currents:** Nature of Bio Electricity: Bioelectric Currents, Nernst Potential, Diffusion Potential, Action potential, Detection of Bio electric events, bio-electrode and electrode-skin interface.

**Unit II - Operational Amplifiers** Basic opamps parameters, Ideal and practical opamp, application of opamp in biomedicine- Adder, subtractor, analog integrator, differentiator, preamplifiers, Transimpedence circuits

Unit III - Active filters and Medical Isolation Amplifiers: First order and second order active filters, Instrumentation amplifier, Types of isolation amplifiers, and optocouplers

**Unit IV - Comparators and Digital Interfaces**: Comparators, Comparator applications, Multivibrators, 555 timers, Astable and monostable, Pacemaker circuits, Aliaisng and sampling, Analog to Digital, Digital to Analog conversion, Biosignal data acquisition systems

**Unit V - Special analog circuits and systems used in biomedical Instrumentation**: Phase Detectors-Analog and Digital, Voltage Controlled Oscillators, Various VCO ICS, Phase locked loops. Electrical Interface problems and Safety Standards in Bio Potential Measurements.

# 17BM2006 BIOSIGNAL CONDITIONING CIRCUITS LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- To understand the design of filters and circuits for bioelectric amplifiers.
- To impart knowledge of the different preamplifiers used for amplifying the bio signals.
- To impart knowledge about the application of signal conditioning in biomedical field.

#### **Course Outcomes:**

- Apply and analyze the front end analogue circuit design for ECG, EMG, EEG, etc.
- Identify the method to apply various signal conditioning circuits.
- Apply the basic concepts of filtering and signal acquisitions for bio signals
- Identify the amplifiers for a variety of biomedical sensors.
- Design and build various digital interfaces for embedded applications
- Select suitable circuits to design various biomedical devices

#### **Description:**

This laboratory introduces the filter design and circuit design for bioelectric amplifiers.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester

#### 17BM2007 BIOCONTROL SYSTEMS

#### Credits: 3:0:0

# Course Objectives:

To study various

- Bio control systems modeling technique.
- Time response analysis and frequency response analysis.

• Analyze biological control systems.

# **Course Outcomes:**

- Represent the system in various forms.
- Compute the mathematical model of physiological systems.
- Interpret the response of the system in time domain.
- Analyze the frequency response of any system
- Examine the stability of the system.
- Summarize the features of physiological system.

**Unit I -** Basic structure of control system, Positive and Negative Feedback, transfer functions, modeling of electrical systems, block diagram and signal flow graph representation of systems

**Unit II** - Difference between engineering and physiological control systems, generalized system properties , models with combination of system elements. Physiological system modeling, Linear model of respiratory mechanics, model of chemical regulation of ventilation, linear model of muscle mechanics, model of regulation of cardiac output, model of Neuromuscular reflex motion

Unit III - Introduction to simulation, Step response of first order and second order systems, determination of time domain specifications of first and second order systems. Definition of steady state error constants and its computation

**Unit IV** - Frequency response, determination of gain margin and phase margin using Bode plot, use of Nichol's chart to compute resonant frequency and band width.

**Unit V** - Definition of stability, Routh-Hurwitz criteria of stability, construction of root locus, Nyquist stability criterion, Nyquist plot and determination of closed loop stability

#### **Reference Books**

# 17EI2008 MEDICAL DIAGNOSTIC EQUIPMENT

# Credits: 3:0:0

#### Course objectives:

- To know the principle of various bio potential recordings equipment.
- To understand the working of equipment used for physiological parameters.
- To learn the diagnostic equipment for clinical and advanced equipment.

#### Course outcomes:

- Identify the procedures for acquisition of physiological signals
- Demonstrate the functions and applications of diagnostic equipment
- Construct the suitable measurement systems and its signal conditioning circuits
- Compare the techniques for clinical diagnosis and its recent methods
- Assess the merits of the diagnostic equipment based on its applications
- Design the devices for the particular application based on given specifications.

**Unit I - Equipment for physiological signals acquisition:** Electrocardiography, Electro encephalography, Electro Oculography, Electro gastrography.

**Unit II - Vital parameter monitoring system:** Measurement of human body temperature, blood pressure monitor, body mass index, Heart rate, respiration rate, oxygen saturation.

Unit III - Equipments for non invasive methods: Pulse oximeter, spirometer, measurements for respiration gas flow, cardiac output, blood flow meter and signal conditioning circuits.

**Unit IV - Clinical equipments:** Bio-chemical measurement:Blood pH, Blood pO2, Blood pCO2, glucometer, hemoglobin monitor, Photometers, chromatograph.

Unit V - Advanced equipments: Ultrasound scanner, holter monitor, multi parameter monitor, capsule endoscopy, foot scanner.

#### **17BM2009 BIOMECHANICS PROSTHESIS AND ORTHOSIS**

# Credits: 3:0:0

#### **Course Objectives:**

- To introduce the fundamental terms and concepts of human system modeling.
- To understand the anthropometric, biomechanical and physiological principles and their use in human • well-being and overall performance.
- To acquire knowledge in evaluation of physiological factors and fitness factors for vehicle drivers. •

#### **Course Outcomes:**

- Recognize the concepts of human system modelling.
- Interpret the human factors that affect the environmental conditions
- Apply the engineering tools in design of prosthetics
- Analyze the data, design, and functions of orthotics and overall performance.
- Evaluate the methods, solutions to human problems for specific needs •
- Design the advanced system concepts implement solutions to a human factors problem.

Unit I - Human system modeling: Human control of systems, biomechanics-stress and fatigue measurements of bones, muscles-cognitive stress-stress modeling- signal acquisition and processing-brain and computer interface.

Unit II - Effects of environmental conditions: Human Factors Applications in medical and industrial field, Heat, stress-Human error- accidents analysis- human factors -case study on evaluation of the physiological factors and fitness factors for defense vehicle driver -safety Standards.

Unit III - Prosthesis: Introduction to Prosthesis, -Gait Analysis in Transtibial Amputees, Prosthesis in Knee Disarticulation- Gait Analysis in Transfemoral Amputees, -Prosthesis for Hand Amputation and Wrist Disarticulation-Recent Advances in Prosthesis

Unit IV - Orthotics: Introduction to orthotics, applications, implants, design of orthotics, modeling and analysis, 3D printing, A support, brace, or splint used to support, the function of movable parts of the body.

Unit V - Introduction to robotics: Definition - Classification - History - Robots components - Degrees of freedom - Robot joints coordinates - Reference frames - Workspace - Robot languages - Actuators - Sensors - Sensor characteristics - and electric actuators

# **17BM2010 BIOSIGNAL PROCESSING LABORATORY**

#### Credits: 0:0:2

#### **Course Objectives:**

To record the bio signals and analyze it.

- To study the different preamplifiers used for amplifying the bio signals.
- To impart knowledge about the measurements and recordings of bioelectric and biochemical signals.

# **Course Outcomes:**

- Recall the fundamentals of signal processing concepts.
- Recognize the morphological features of a signal.
- Apply the signal processing algorithms for real time bio-signals.
- Analyze the characteristics of the signal.
- Design digital filters for bio signal processing.
- Select suitable digital signal processors for processing a signal.

# **Description:**

This laboratory introduces the different digital filters, sampling process and signal processing algorithms suitable for pre-processing the bio signals.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester

# 17BM2011 MEDICAL THERAPEUTIC EQUIPMENT

# Credits: 3:0:0

# **Course objectives:**

- To learn the principles of cardiac assist devices.
- To understand the need and use of extracorporeal devices, and the use of lasers in medicine.
- To enable the students to gain knowledge on the working of therapeutic clinical equipment.

# Course outcomes:

- Identify the various therapeutic devices available for specific diseases.
- Demonstrate the functions and applications of cardiac, respiratory and electrotherapy equipment.
- Apply the appropriate therapeutic device for a particular ailment.
- Compare the techniques used in hospitals and its recent advancements.
- Assess the merits and demerits of the therapeutic equipment based on its applications.
- Design new therapeutic devices for particular application based on given specifications.

**Unit I - Cardiac Equipment:** External and implantable pacemakers, Programmable pacemakers, Power sources, Design of encapsulation and leads, Pacing system analyzers. Cardiac Defibrillators, Basic principles and comparison of different Defibrillators, Energy requirements, Synchronous operation, Implantable Defibrillators, Defibrillator analyzers.

**Unit II - Respiratory Equipment:** Principles of constant pressure and constant volume ventilators, Basic principles of electromechanical, Pneumatic and electronic ventilators, Nebulizer, Ventilator testing.

**Unit III - Electrotherapy Equipment – I:** Electro diagnosis, Electrotherapy, Electrodes, Stimulators for Nerve and Muscle, Stimulator for pain relief, Interferential current therapy, Spinal cord stimulator, Diaphragm pacing for artificial ventilation. Functional Electrical Stimulation.

**Unit IV - Electrotherapy Equipment – II:** High frequency heat therapy, Principle, Short wave diathermy, Microwave diathermy, Ultrasonic therapy, Lithotripsy, Therapeutic IR radiation, Therapeutic UV Lamps.

Unit V - Therapeutic Lasers: Basic principles of Biomedical LASERS: Applications of lasers in medicine,  $CO_2$  laser, He-Ne laser, Nd-YAG and Ruby laser.

# 17BM2012 BIOMEDICAL INSTRUMENTATION LABORATORY

#### Credits: 0:0:2

#### **Course Objective:**

- To record the bio signals and analyze it.
- To study the different preamplifiers used for amplifying the bio signals.
- To impart knowledge about the measurements and recordings of bioelectric and biochemical signals.

#### **Course Outcome:**

- Calibrate medical instruments.
- Identify the suitability of diagnostic and therapeutic equipment for specific applications.
- Analyze the performance of various biomedical equipment and infer their safety aspects.
- Apply appropriate measurement techniques.
- Design portable instruments capable of recording bio signals.
- Evaluate the performance of medical instruments.

#### **Description:**

This laboratory introduces the different diagnostic and therapeutic equipment, their working and the methodologies used for analysing and recording bio signals.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

# 17BM2013 MODELLING OF PHYSIOLOGICAL SYSTEMS

#### Credits: 3:0:0

#### **Course objectives:**

- To learn the basic ideas related to modeling.
- Understand different modelling techniques of physiological systems.
- To study the various regulatory systems of the human body.

#### **Course Outcomes:**

- Analyze the concepts of modeling
- Differentiate the dynamics of circulatory system
- Perform the modeling for thermal regulatory system
- Design the model for Renal system
- Evaluate the mass-balance concept for respiratory system
- Summarize the mathematical concept for any Physiological system

**Unit I - Basics of Physiological Systems:** Systems Analysis, examples of physiological control systems, differences between engineering and physiological control systems. Generalized system properties, mathematical approach, electrical analogs, linear models, lung mechanics, muscle mechanics, distributed parameter versus lumped parameter models, static analysis, regulation of cardiac output, blood glucose regulation, chemical regulation of ventilation, electrical model of neural control mechanism

**Unit II - Circulatory System:** Physical, chemical and rheological properties of blood, problems associated with extra corporeal blood flow, dynamics of circulatory system.

**Unit III - Thermal Regulatory** System: Parameters involved, Control system model etc. Biochemistry of digestion, types of heat loss from body, models of heat transfer between subsystem of human body like skin core, etc. and systems like within body, body, environment, etc.

**Unit IV - Ultra-Filtration System:** Transport through cells and tubules, diffusion, facilitated diffusion and active transport, methods of waste removal, counter current model of urine formation in nephron, Modeling Henle's loop.

**Unit V - Respiratory System: M**odelling oxygen uptake by RBC and pulmonary capillaries, Mass balancing by lungs, Gas transport mechanisms of lungs, oxygen and carbon dioxide transport in blood and tissues

#### **Reference Books**

#### 17BM2014 MEDICAL IMAGING TECHNIQUES

#### Credits: 3:0:0

#### **Course Objectives:**

- To study the quality assurance test for radiography, method of recording sectional images
- To study the functioning of radio isotopic imaging equipment.
- To study the MRI, image acquisition and reconstruction

#### **Course Outcomes:**

- List out the various medical imaging techniques.
- Explain the principle of specific medical imaging techniques.
- Interpret the imaging outputs.
- Identify the suitable medical imaging techniques for specific pathology.
- Devise new ideas to solve certain issues in medical imaging.
- Justify the impact of medical imaging system for diagnosis.

**Unit I - ULTRASOUND IN MEDICINE**: Production of ultrasound – properties and principles of image formation, capture and display – principles of A-mode, B-mode and M-mode display – Doppler ultra sound and color flow mapping – applications of diagnostic ultra sound.

**Unit II - X-RAY COMPUTED TOMOGRAPHY**: Principles of sectional imaging – scanner configuration – data acquisition system – image formation principles – conversion of x-ray data in to scan image – 2-D image reconstruction techniques –Iteration and Fourier method – types of CT scanners.

**Unit III - MAGNETIC RESONANCE IMAGING**: Principles of MRI pulse sequence – image acquisition and reconstruction techniques – MRI instrumentation magnetic gradient system RF coils – receiver system functional MRI – Application of MRI.

**Unit IV - RADIO ISOTOPIC IMAGING**: Rectilinear scanners – linear scanners – SPECT – PET Gamma camera radio nuclides for imaging – emission computed CT 78.

**Unit V - INFRA RED IMAGING**: Physics of thermography – imaging systems – pyroelectric Videocon camera clinical thermography – liquid crystal thermography.

#### 17BM2015 DIGITAL IMAGE PROCESSING FOR MEDICAL APPLICATION

#### Credits: 3:0:0

#### **Course Objectives:**

- Learn digital image fundamentals.
- Be exposed to simple image processing techniques.
- Be familiar with image compression and segmentation techniques.

#### **Course Outcomes:**

- Describe various concepts of digital image processing
- Select suitable technique for accomplishing specific image processing task
- Illustrate the steps involved in processing digital images
- Analyze the performance of image processing techniques
- Devise new ideas or tools to solve common issues in certain applications
- Assess the impact of digital image processing for medical application

**Unit I - Digital image fundamentals:** Introduction – Origin – Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization – Relationships between pixels - color models.

**Unit II - Image enhancement:** Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering–Smoothing and Sharpening Spatial Filtering – Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters.

**Unit III - Image restoration and segmentation: Noise models** – Mean Filters – Order Statistics – Adaptive filters – Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering **Segmentation:** Detection of Discontinuities–Edge Linking and Boundary detection – Region based segmentation- Morphological processing- erosion and dilation.

**Unit IV - Wavelets and image compression:** Wavelets – Subband coding - Multiresolution expansions - **Compression:** Fundamentals – Image Compression models – Error Free Compression – Variable Length Coding – Bit-Plane Coding – Lossless Predictive Coding – Lossy Compression – Lossy Predictive Coding – Compression Standards.

Unit V - Image representation and recognition: Boundary representation – Chain Code – Polygonal approximation, signature, boundary segments – Boundary description – Shape number – Fourier Descriptor, moments- Regional Descriptors – Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.

#### 17BM2016 EMBEDDED BIOMEDICAL INSTRUMENTATION SYSTEMS

# Credits: 3:0:0

# **Course Objectives:**

- To study the fundamentals of embedded system and its hardware units.
- To study the concepts of various programming models for embedded system design
- To study the development activities of real time biomedical instrumentation system for medical applications

# **Course Outcomes:**

- Identify the basic need of embedded systems and various software development tools
- Classify the different program modelling concepts for real time system design
- Choose the suitable techniques for biomedical instrumentation system application development
- Demonstrate various interfacing issues related to real time embedded applications
- Point out the requirement of RTOS for multitasking execution
- Design embedded based biomedical system for remote applications

**Unit I - Introduction to embedded systems:** Embedded system, Processor embedded into a system, embedded hardware units – Embedded software in a system – Conversion of assembly language into machine codes – Software tools for designing an embedded systems – Examples of an embedded systems – Complex systems design and processors – Design process in embedded system – Classification of an embedded systems

**Unit II - Program modeling concepts:** Program modeling concepts –State machine programming model- State Machine and state Tables in embedded design – Modelling for multiprocessor systems – UML modeling – High level language descriptions of S/W for embedded system – Software programming – Object oriented programming – Embedded programming advantages and disadvantages

**Unit III - Interfacing techniques for system design:** Getting embedded software into a target system, Simulation and Emulation of an embedded system, Software development tools-Overview of analog and digital Interfacing-LED, Seven Segment Display, Switch Interface, Keypad Interface, Data Acquisition system- Analog to Digital and Digital to analog converters, Timer operations. Pressure sensor interfacing, Temperature sensor interfacing and serial communications

**Unit IV - Real time multitasking system:** Real time languages, OS tasks, Task states, Real time kernel, Preemptive Kernel, Non preemptive kernel, Priority Inversion Problem, Task scheduling, Interrupt Service Routine in RTOS environment.

**Unit V - Applications:** Computerised versions of ECG, EEG, EMG Acquisitions - Embedded implementation of physiological parameters monitoring system, Role of body sensor networks for biomedical applications, Study of wireless modules for biomedical applications- Case studies in medical signal and image processing, Design of embedded system for classifying and diagnosis of various diseases.

# 17BM2017 EMBEDDED BIOMEDICAL INSTRUMENTATION SYSTEMS LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- To impart the basic knowledge about embedded systems.
- To learn about the Embedded Processors with Real World applications.
- To understand the concepts of embedded programming.

#### **Course Outcomes:**

- List different software tools used for system design
- Review the structure of embedded software and download it to the embedded hardware.
- Demonstrate the necessary of embedded hardware and the interface issues related to it.
- Identify the various procedures for designing real time system
- Design a real time biomedical system for real time bio signal acquisitions
- Summarize the programming issues related to biomedical instrumentation system

#### **Description:**

This course enables the students to gain practical knowledge in embedded programming, data acquisition and interfacing techniques of medical sensors and instruments with microcontrollers and apply it to real time applications.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

#### 17BM2018 BIOVIRTUAL INSTRUMENTATION LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- To study the basic programming concepts of virtual instrumentation.
- To study the various functions available to process and extract features from bio signals.
- To learn about real time data acquisition and medical sensors interfacing concepts.

# **Course Outcomes:**

- Create, edit and debug bio virtual instruments.
- Understand the usage of biomedical tool kit for processing bio signals.
- Develop virtual instrumentation systems for filtering and processing of bio signals.
- Apply computer interfacing principles for bio signal acquisition.
- Interpret the merits of real time processing of data using LabVIEW.
- Appraise the usefulness of LabVIEW in real time data acquisition and processing of bio signals which aids in measurement of physiological data and analysis.

#### **Description:**

This course enables the students to gain practical knowledge in programming techniques, data acquisition and interfacing techniques of virtual instrumentation and apply it to real time environment.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

#### 17BM2019 MEDICAL IMAGE PROCESSING LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- To teach about the image processing tool
- To impart hands-on knowledge on various image processing techniques
- To apply for biomedical image applications.

#### **Course Outcomes:**

- Describe various components of digital image processing tool
- Select suitable technique for implementing specific image processing task
- Illustrate the steps involved in processing digital images
- Analyze the results of image processing algorithms
- Devise new approach to solve issues in certain applications
- Assess the impact of digital image processing tool for medical application

#### **Description:**

This course enables the students to gain practical knowledge in medical image processing techniques, using various algorithms.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

#### 17BM2020 SURGICAL ASSIST SYSTEMS

#### Credits: 3:0:0

#### **Course objectives:**

- Understand the need for robotics based assistive devices
- Learn robot kinematics, trajectory control
- Apply control algorithms in controlling robot motion for medical applications

#### **Course Outcomes:**

- Identify the concepts of robotics, motion, joints
- Summarize the principles of sensors and actuators for robots
- Use the software tools for designing and analysing the robot motion
- Classify the performance to various sensors to its environment

- Recommend the suitable principles for specific conditions
- Create simple robots for surgical applications

Unit I - Introduction to Robotics: Degree of freedom, path planning, Lagrange equation of motion, kinetics, payload.

Unit II - Robot sensors, actuators: Sensors and actuators, gripper- types, applications. Proximity switches,

Unit III - Mechanism: Lift mechanism for surgery, special lighting controls, ventilator, and heart lung machine.

Unit IV - Controllers: Artificial intelligence, machine vision, design of controllers.

Unit V - Human machine interface: Surgical conditions, types of surgeries by robots, camera, wireless devices, remote monitors, case studies.

#### **Reference Books**

#### 17BM2021 SENSORY AND MOTOR REHABILITATION

#### Credit: 3:0:0

#### **Course Objectives:**

- Know the fundamental rehabilitation concepts for future development and applications.
- Understand orthopedic prosthetics and orthotics in rehabilitation.
- Apply the technology to improve the quality of life of the disabled population.

#### **Course Outcomes:**

- Identify the models of rehabilitation
- Interpret the techniques for disabilities related to sensory and motor functions
- Construct the test bench, tools and methods for troubleshooting
- Compare various standards and specifications.
- Decide quality and safety standards in design of devices for user needs
- Formulate advanced methods to solve critical problems related to old aged

Unit I - Rehabilitation concepts: Engineering concepts in sensory rehabilitation, motor rehabilitation. Survey.

**Unit II - Sensory Rehabilitation**: Rehabilitation of auditory disorders, and vision, measurement system, rehabilitation methods- Hearing aids and other assistive devices. Language disorders, assessment and treatment.

Unit III - Motor Rehabilitation: Limb disorder, fractures, mobility aids, assist devices, types, prosthetics, myoelectric arm.

**Unit IV - Cognitive Rehabilitation:** Cognitive disorder, assessment, design of communication aids, assist devices for cognitive development, evaluation of improvements.

Unit V - Rehabilitation for Old aged: Assist devices for old aged, assist devices for lifting, standing, movement, monitoring systems, movement sensor, Case study.

#### **Reference Books**

#### 17BM2022 MEDICAL EQUIPMENT MAINTENANCE AND TROUBLESHOOTING Credits: 3:0:0

#### **Course Objectives:**

- Understand troubleshooting of electrical and electronic equipment.
- Learn the trouble shooting of medical equipment.
- Apply the tools in design, testing and developing medical equipment

#### **Course Outcomes:**

- Identify the reasons for equipment failure.
- Interpret the need for grounding aspects, maintenance and troubleshooting.
- Construct the test bench, tools and methods for troubleshooting
- Compare various standards and specifications.
- Decide quality and safety standards
- Formulate advanced methods to solve critical problems.

**Unit I - Testing of electrical equipments**: AC, DC power supply, Grounding, shielding, Guarding, insulation testing, insulation resistance measurement, Types of Circuit Breakers, Rating - Testing of circuit breakers – Tranformer testing- Earthing –Earth wires - Earthing of appliances – contactor, relay testing–CT and PT, Panel wiring- Megger-Testing equipments and instruments.

**Unit II - Testing of electronic components**: Troubleshooting of PCB boards, Calibration of analog and digital sensor probe, Display interface, DC Power supply design, testing, Safe electrical practice, Cables and standard, Fuse.

**Unit III - Testing of surgical Equipment:** Functions and operating procedure-Testing and maintenance of Heart lung machine, surgical lights, ventilator, patient monitor, anesthesia machine, dialyzer, surgical tools.

**Unit IV - Troubleshooting of equipments:** X-ray machines, Troubleshooting of ECG recorders, incubator, baby warmer, infusion pumps, annual maintenance, contract requirements, vendor services, quality and safety standards.

Unit V - Life cycle management of medical equipment: Cost of the medical equipment, maintenance cost, replacement analysis, managing equipment service, decision making, extracting optimal benefit from medical equipment over its life cycle. Case study.

#### **17BM2023 BIOMEDICAL OPTICS**

#### Credit 3:0:0

#### Course Objective:

- To offer clear understanding of tissue characteristics when it is exposed to optical energy.
- To know about various optical sources and applications of lasers.
- To learn about Holography and its medical applications.

#### **Course Outcomes:**

- Recall the principles of optical properties
- Explain the different measurement techniques in medical optics
- Illustrate the concept of biomedical optics in various real life applications
- Analyze the instrumentation involved in biomedical optics
- Apply laser instrumentation in medical diagnosis and therapy
- Discuss the therapeutic applications in the field of medicine

**Unit I - Optical properties of the tissues:** Refraction, Scattering, Absorption, Light transport inside the tissue, Tissue properties, Laser Characteristics as applied to medicine and biology-Laser tissue Interaction-Chemical-Thermal- Electromechanical – Photoabalative processes.

**Unit II - Instrumentation in photonics:** Instrumentation for absorption, Scattering and emission measurements, excitation light sources – high pressure arc lamp, LEDs, Lasers, Optical filters, - optical detectors – Time resolved and phase resolved detectors.

**Unit III - Laser applications:** Lasers in ophthalmology- Dermatology –Dentistry-Urology-Otolaryngology - Tissue welding.

**Unit IV - Non thermal diagnostic applications:** Optical coherence tomography, Elastography, Laser Induced Fluorescence (LIF)-Imaging, FLIM Raman Spectroscopy and Imaging, FLIM – Holographic and speckle application of lasers in biology and medicine.

**Unit V - Therapeutic applications:** Phototherapy, Photodynamic therapy (PDT) - Principle and mechanism - Oncological and nononcological applications of PDT - Biostimulation effect – applications-Laser Safety Procedures.

#### **Reference Books**

# **17BM2024 BIOMETRIC SYSTEMS**

#### Credits: 3:0:0

#### **Course Objective:**

- To introduce the basic concepts of fingerprint, iris, face and speech recognition.
- To impart knowledge on the general principles of design of biometric systems and the underlying trade-offs
- To render knowledge on personal privacy and security implications of biometrics based identification technology and the issues realized

#### **Course Outcome:**

- Infer the technologies of fingerprint, iris, face and speech recognition.
- Expertise in the general principles of design of biometric systems and the underlying trade-offs.
- Priorities the work on identification and recognition depends on physiological and behavioral characteristics
- Identifying the interfacing technologies for real time biometric applications
- Inculcate knowledge on personal privacy and security implications of
- Biometrics based identification technology and the issues involved.

**Unit I - Biometric Fundamentals – Definition**: Biometrics versus traditional techniques – Characteristics - Key biometric processes - Verification - Identification - Biometric matching - Performance measures in biometric systems - Assessing the privacy risks of biometrics.

Unit II - Physiological Biometrics Characteristics: Facial scan - Ear scan, Retina scan -

Iris scan - Finger scan - automated fingerprint identification system - Palm print - Hand vascular geometry analysis - DNA - Dental.

**Unit III - Behavioural Biometrics Characteristics:** Signature scan - Keystroke scan - Voice scan, Gait recognition - Gesture recognition - Video face - mapping the body technology.

**Unit IV - Biometric Interfaces:** Human machine interface - BHMI structure, Human side interface: Iris image interface - Hand geometry and fingerprint sensor - Machine side interface - Parallel port - Serial port - Network topologies.

**Unit V - Biometric Applications:** Categorizing biometric applications, Application areas: Criminal and citizen identification – Surveillance - PC/network access - E-commerce and retail/ATM - Costs to deploy - Issues in deployment - Biometrics in medicine - cancellable biometrics.

# 17BM2025 RADIATION AND NUCLEAR MEDICINE

#### Credits: 3:0:0

#### **Course Objectives:**

- To expose the student to the use of ionizing radiation and its biological effects in the medical field.
- To know about the use of ionizing radiation in medical and industrial applications.
- To understand the biological effects of low and high doses of ionizing radiation.

#### **Course Outcomes:**

- Acquire knowledge about radiation activity in the living cells.
- Identify the key principles of nuclear medicine and radioactivity.
- Analyze the working principle of advanced nuclear medicine imaging systems.
- Interpret the effects of ionizing and non-ionizing radiations
- Analyze the effect of microwave on human organs and systems.
- Suggest suitable therapeutic radiation for diseases without any side effects.

**Unit I - Action of Radiation in Living Cells:** Various theories related to radiation at cellular level. Dna and chromosomal damages. Somatic application of radiation. Radio sensitivity protocols of different tissues of human. Ld50/30 effective radiation on skin, bone marrow, Eye, endocrine glands, and basis of radio therapy. Genetic effects of radiation: Threshold and linear dose, gene control hereditary diseases effect of dose. Effect of microwave: Effects on various human organs and systems.

**Unit II - Nuclear Medicine:** Basic characteristic and units of radioactivity, ionization chamber, GM tubes, Gas filled detectors, scintillation detectors, semiconductor detectors, Liquid scintillation counter, Statistical aspects of nuclear medicine.

**Unit III - Nuclear Medicine Imaging Systems:** Rectilinear scanners, Scintillation Camera, principle of operation, collimator, photomultiplier tube, Pulse height Analyser, computerized multi crystal Gamma camera, Principles of PET and SPECT.

**Unit IV - Radiation Therapy:** Principles of Radiation Therapy, Radio therapy treatment planning Dose in Radiotherapy, Mega voltage therapy, Intensity modulated Radiation therapy, Brachy-therapy, Radiotherapy using radio isotopes

Unit V - Radiobiology and Radiological Protection: Radiation sensitivity of biological materials, Evidence on radiobiological damage from cell survival curve, Radiation effects on humans, Maximum permissible dose equivalent limits, Hazard from ingested radioactivity, substances, ICRP regulations, Quality factor and sievert, Principles of radiological protection, personnel dosimetry.

#### **17BM2026 PATIENT AND DEVICE SAFETY**

#### Credits: 3:0:0

#### **Course Objectives:**

- To provide a source of useful ideas, concepts, and techniques that could be selectively applied to reduce an intolerable rate of unacceptable errors, mistakes, goofs, or short comings in expected Medical Device performance.
- To avoid patient injury, achieving efficacious treatment, and controlling health care costs.
- Medical error has proved to be a difficult and recalcitrant phenomenon.

#### **Course Outcomes:**

- Identify the mechanical and electrical safety standards of medical equipment
- Understand device specific safety goals
- Interpret reasonable, acceptable and effective remedies and counter measure
- Access the clinical suitability to under the impact of the device on the environment
- Device more reliable medical equipment incorporating safety goals
- Suggest new techniques for device management

**Unit I - Reliability and Safety Testing:** Reliability – Types of reliability – Reliability optimization & assurance – Reliability's effect on medical devices – The concept of failure – Causes of failure – Types of Failures in Medical devices – Safety testing – Device specific safety goals, Failure assessment and Documentation – Visual inspection: External & Internal visual inspection – Measurement – Safety parameters, Function test

**Unit II - Risk Management:** Safety and risk management – Risk, Deciding on acceptable risk, Factors important to medical device risk assessment – Risk management – Tools for risk estimation – Liability – Manufacturer's and physician's responsibilities

**Unit III - Medical Devices Handling, Environmental & Ecological Safety:** Safe medical devices – Handling and operation – Medical Application safety – Usability – Clinical assessment – Environmental safety – Interference with the environment – Environmental conditions, Impact on the environment – Ecological safety

**Unit IV - Mechanical and Electrical Safety:** Safety Mechanics – Electrical Safety – Biological aspect – Limitation of Voltages - Macroshock and Microshock – Earth and Protection – Leakage currents – Magnetic fields and compatibility – Basic assumptions in safety technology – Safety classes

**Unit V - Medical Devices Standards, Regulations & Directives:** Medical Standards and Regulations – Device classification – Registration and listing – Declaration of conformance to a recognized standard – Investigational Device Exemptions (IDEs) – Institutional Review Boards (IRBs) – IDE format – Good laboratory practices (GLPs) – Good manufacturing practices (GMPs) – Human factors – Design control – The Medical Devices Directives (MDD) – Definition, Process and choosing the appropriate directive – Active Implantable Medical Devices Directive (AIMDD) – In Vitro Diagnostic Medical Devices Directive (IVDMDD).

#### 17BM2027 ICU AND OPERATION THEATRE EQUIPMENT

#### Credit: 3:0:0

#### **Course Objective:**

- To offer clear understanding of various intensive care equipment and their working.
- To understand the necessity of different operation theatre equipment.
- To know about different dialyzers and ventilators.

#### **Course Outcome:**

- Apply the knowledge acquired, in designing new monitoring devices for ICU.
- Suggest suitable surgical instruments and operational devices.
- Assist the medical personnel's during emergency situations in the ICU.
- Compare the various techniques for clinical diagnosis, therapy and surgery, and its recent methods
- Assess the merits of the operation theatre equipment based on its applications
- Design the devices for the particular application based on given specifications.

**Unit I - ICU Equipment:** Suction apparatus, Different types; Sterilizers, Chemical, Radiation, Steam for small and larger units. Automated drug delivery systems, Infusion pumps, closed loop control infusion system, implantable infusion system.

**Unit II - Critical Care Equipment:** Hemodialysis Machine, Different types of Dialyzers, Membranes, Machine controls and measurements. Heart Lung Machine, different types of oxygenators, peristaltic pumps, Incubators.

**Unit III - Operation Theatre Equipment:** Surgical diathermy, Instruments for operation. Anesthesia Equipment, Humidification, Sterilization aspects, Boyles apparatus.

**Unit IV - Centralised Systems:** Centralized Oxygen, Nitrogen, Air supply & Suction. Centralized Air Conditioning, Operation Theatre table & Lighting.

**Unit V - Patient Safety:** Patient electrical safety, Types of hazards, Natural protective mechanisms against electricity, Leakage current, Inspection of grounding and patient isolation, Hazards in operation rooms, ICCU and IMCUs, Opto couplers and Pulse transformers.

#### 17BM2028 GRAPHICAL SYSTEM DESIGN FOR BIOMEDICAL ENGINEERS

#### Credits: 3:0:0

#### **Course Objectives:**

- To create knowledge in acquiring data and control an external measuring device by interfacing to a computer.
- To study about the basic of Programming Techniques and its applications.
- To become a performer in designing virtual instruments for various biomedical measurements and applications.

## **Course Outcomes:**

- Understand Computer based instrumentation for real time applications
- Interfacing with real time signals
- Analyzing the application of VIs in medical instrumentation in developing medical instruments
- Perform signal processing operations using virtual instrumentation
- Identify salient traits of a virtual instrument and incorporate these traits in projects.
- Experiment, analyze and document in the laboratory prototype measurement systems using a computer, plug-in DAQ interfaces and bench level instruments.

**Unit I - Labview programming principles & environment:** Data flow – Definition, and importance of data flow in LabVIEW – Identify programming practices that enforce data flow in block diagram, Virtual instrumentation (VI), and sub-VIs - Identify programming practices that break data flow – Polymorphism - Define polymorphism - Identify benefits of polymorphism - Determine output or intermediate values of data elements in VI that utilizes polymorphic inputs LabVIEW Environment -Front panel window, block diagram, and connector pane - Identify which types of VIs do not have a block diagram - Identify the purpose of the connector pane and icon – Palettes

**Unit II - Software constructs & programming functions**: Front panel window and block diagram objects - Controls, indicators, IO controls, and refnums - Property Nodes - Data types and data structures - Working with objects and data types on front panel windows – Program control structures and data storage - Flat and Stacked sequence structures - Event structures- Formula Node - Arrays and clusters

**Unit III - Data communication & synchronization:** Local, global, and shared variables – Data Socket - TCP and UDP – Synchronization – Notifiers – Queues - VI Server - configuring the VI Server - Error handling VIs and functions - Debugging tools and techniques.

**Unit IV - Virtual insturmentation (vi) design & subvi design techniques:** Simple state machine - User interface event handler - Queued message handler - Producer/consumer (data) and producer/consumer (events) - Functional global variables - Connector panes and connection types - Polymorphic subVIs - Options related to subVIs - Error handling – User interface design and block diagram layout - Modular and hierarchical design - SubVI icons and connector pane layout (standard) - VI properties - Documenting VIs

**Unit V - Memory, performance and determinism:** Tools for identifying memory and performance issues - Profile memory and performance - Show buffer allocations- VI metrics - Programming practices - Enforcing dataflow -User interface updates and response to user interface controls - Data type selection, coercion, and buffer allocation - Array, string, and loop operations -Local and global variables, Property Nodes.

#### 17BM2029 WEARABLE SYSTEMS AND DIGITAL HEALTH CARE

#### Credits: 3:0:0

#### **Course Objectives:**

- Understand the needs for wearable devices and the technology
- Learn the concepts in digital health care and digital hospitals
- Apply the tools in design, testing and developing digital health care equipment

#### **Course Outcomes:**

- Identify the available technology for wearable devices
- Interpret the need for digital methods of handling medical records
- Construct the tools and methods for work flow
- Compare various standards for inter-operability of devices
- Decide quality and safety standards for developing new devices
- Formulate advanced strategies for innovation to societal needs.

**Unit I - Wearable devices and m-Health care:** Introduction to mobile health care-devices-economy-average length of stay in hospital, outpatient care, health care costs, mobile phones, 4G, smart devices, wearable devices, Uptake of e-health and m-health technologies. Standards.

**Unit II - Digital Radiology:** Digital radiology for digital hospital, picture archiving and communication, system integration, digital history of radiology, medical image archives, storage and networks.

**Unit III - e-Health:** Health care networking, Medical reporting using speech recognition, physiological tests and functional diagnosis with digital methods, tele-consultation in medicine and radiology. Multimodality registration in daily clinical practice. Mobile health care.

Unit IV - Digital Health: Requirements and best practices, Laws and regulations in Digital health, Ethical issues, barriers and strategies for innovation.

Unit V - Standards for inter operability: Selection and Implementation in e-Health project, design of medical equipments based on user needs. Security and privacy in digital health care.

# **17BM2030 BIO-MEMS TECHNOLOGY**

# Credits: 3:0:0

#### **Course Objective:**

- Introduce the concepts of micro electromechanical systems in medical use
- Learn the materials used and the micro manufacturing of devices
- Apply Microsystems and their applications in medical field

#### **Course Outcome:**

- Identify the micro fabrication methods
- Summarize the principles of sensors and actuators
- Use the software tools for designing and analysing the sensors
- Classify the performance to various sensors to its environment
- Recommend the suitable principles for specific conditions
- Create simple systems for medical applications

Unit I - MEMS and Microsystem: Introduction, working principles, materials, micro machining.

Unit II - Micro sensor and actuator: Working principles of Beam, cantilever, piezoelectric sensor, thermal sensor, and actuator, Peltier heat pump and magnetic sensor.

Unit III - Micro Optical sensors: principles of micro lens, digital micro mirror, light detector, medical applications.

Unit IV - Micro fluidics: Fluid actuation methods, micro fluid dispenser, micro needle, micro pump.

**Unit V - MEMS Biomedical applications:** Micro TAS, micro pressure sensor for detecting human blood pressure, micro flow sensor, micro accelerometer, micro gyro. Radio pill micro device, biochip.

#### **Reference Books**

#### 17BM3001 ADVANCED MEDICAL INSTRUMENTATION

#### Credits: 3:0:0

#### **Course Objectives:**

- Understand the fundamentals of human physiology system and its functions.
- Learn the fundamental concepts of physiological parameters measurement.
- Apply the concepts of various medical instruments for biomedical applications.

#### Course Outcomes:

- Identify the basic need of various human physiology system
- Demonstrate an interfacing circuit for real time bio signal acquisition and processing
- Construct the suitable acquisition method for analyzing biomedical signal.
- Categorize the real time system models for biomedical applications
- Evaluate the various structure for patient safety
- Design real time biomedical system for diagnosing various diseases

**Unit I - Introduction to Human Physiology:** Circulatory system – cardio vascular system-central nervous system – respiratory system – muscular skeletal system – digestive system – excretory system – sensory organs – voluntary and involuntary action.

**Unit II - Biopotentials and their Measurements:** cell and its structure – resting potentials – action potentials – bioelectric potentials – measurement of potentials and their recording – basic principles of ECG, EEG, EMG– Electrode theory – bipolar and Unipolar electrode-surface electrode – electrode impedance –equivalent circuit for extra cellular electrodes- micro electrodes.

**Unit III - Computer based medical instrumentation:** Computerised versions of ECG, EEG, EMG, Tread Mill Test ECG– Foetal monitor, cardiac arrthymias and its monitoring through Hotler monitor, Event monitors, Bispectral Index EEG for depth of anesthesia monitoring.

Unit IV - Operation theatre equipment and Critical Care instrumentation: Patient monitors, pulse oximetry, ICU ventilators, suction apparatus, anesthesia equipment, electro surgery, operating microscopes, motorized operation table, infusion pumps and syringe pumps, nerve stimulator, defibrillators, Electrical Safety and other safety aspects of medical equipment.

**Unit V - Medical Imaging Techniques and Therapeutic, diagnostic equipment:** X-rays – scanning techniquesultrasound scanner- color Doppler system, CT, MRI scanning techniques – coronary angiogram, nuclear imaging, Specialized Therapeutic and diagnostic equipment Cardiac pacemakers, heart lung machines, haemodialysis, clinical laboratory instrumentation, Audiometer, Phonocardiogram.

#### **Reference Books:**

- 4. Myer Kutz, "Standard Handbook of Biomedical Engineering & Design", McGraw Hill Publisher, UK, 2003.

#### 17BM3002 MEDICAL IMAGE COMPUTING

#### Credits: 3:0:0

#### **Course Objectives:**

- Learn the fundamentals of digital image processing
- Understand various methods of medical image processing techniques
- Apply the methodologies for clinical applications

## **Course Outcomes:**

- Describe various concepts of digital image processing
- Select suitable technique for accomplishing specific image processing task
- Illustrate the steps involved in processing digital images
- Analyze the performance of image processing techniques
- Devise new ideas or tools to solve common issues in certain applications
- Assess the impact of digital image processing for medical application

**Unit I - Image representation:** Pixels and voxels, gray scale and color representation, image file formats, DICOM, other formats- intensity transform functions, and the dynamic range, windowing, histogram and histogram operations, dithering and depth, filtering and fourier transform.

**Unit II - Segmentation:** The segmentation problem, Region of interest and centroid, theresholding, region growing, sophisticated segmentation methods, morphological operations, evaluation of segmentation results-Clinical applications.

**Unit III - Spatial Transforms:** Discretisation, interpolation and volume regularization, translation and rotation, reformatting, tracking and image guided therapy- Visualization, orthogonal and perspective projection, and their view point, raycasting, surface based rendering-Clinical applications.

**Unit IV - Registration:** Fusing information, registration paradigm, merit functions, optimization strategies-camera calibration, registration to physical space-evaluation of registration results- Clinical applications.

**Unit V - CT reconstruction:** Introduction-Radon transform-algebraic reconstruction-Fourier transform and filtering-filtered back projection-Clinical applications.

#### 17BM3003 SOFT COMPUTING TECHNIQUES FOR BIOMEDICAL ENGINEERS

# Credits: 3:0:0

#### **Course Objectives:**

- Introduce the basic concepts of neural networks and medical applications
- Learn fuzzy logic concept and its applications in biomedicine.
- Apply genetic algorithm, ant colony optimization and particle swam optimization techniques in solving medical engineering problems.

#### **Course Outcomes:**

- Identify the basics of machine learning algorithms.
- Demonstrate the application of soft computing.
- Apply the machine learning techniques to solve real world problems, mainly pertaining to medical applications.
- Design new algorithms through cognitive research.
- Develop new hypothesis based on the cognitive technology.
- Evaluate the effectiveness of the algorithms and modify.

**Unit I - Introduction to neural networks:** Introduction – Biological neurons and their artificial models – Learning, Adaptation and neural network's learning rules – Types of neural networks – Single layer, Multiple layer – Feed forward, Feedback networks, Back propagation– Learning and training.

**Unit II - Special networks and applications:** Associative memory – BAM – Hopfield network – ART Network – SOM – Case studies: Depth of anesthesia monitoring using neural networks, Bio signal classification, Pattern recognition.

**Unit III - Introduction to fuzzy logic:** Fuzzy sets – Fuzzy operation – Fuzzy arithmetic – Fuzzy relations – Fuzzy relational equations – Fuzzy measure – Fuzzy functions –Approximate reasoning – Fuzzy propositions –Fuzzy quantifiers – If then rules.

**Unit IV - Fuzzy logic control:** Structure of fuzzy logic controller – Fuzzification models –Data base – Rule base – Inference engine – Defuzzification module Case studies: Blood pressure monitoring during anesthesia using fuzzy logic, Image processing using fuzzy logic, Home heating system.

**Unit V** - **Soft Computing Techniques and its applications:** Fundamentals of genetic algorithm: Evolutionary computation – Search space – Encoding – Reproduction – Elements of genetic algorithm – Ant Colony Optimization techniques, Particle Swam Optimization techniques and its applications, Machine learning Algorithms – Random Forest, ANFIS, Case studies.

#### 17BM3004 MEDICAL SENSORS AND MEMS TECHNOLOGY

#### Credits: 3:0:0

#### **Course Objectives:**

- Understand the in depth and quantitative view of medical sensors, its characteristics and applications for wearable and smart sensors
- Overview of the current state of the art to micro sensor fabrication methods micro sensor design, analysis, materials and testing
- Apply the tools to design and development of sensors for the medical applications

#### **Course Outcome:**

- Identify the principle of medical sensors and its interfacing circuits for application
- Classify the micro sensor materials and fabrication process
- Apply the design tools to test and develop products to required specifications
- Analyze the most relevant challenges facing the smart sensor research field
- Evaluate a sensor based on standard performance criteria and appropriateness for an application and its impact on environment and user.
- Create the wearable sensor and micro sensor for the particular application,

Unit I - Classification of Medical Sensors: Sensors for Pressure Measurement- Sensors for Motion and Force Measurement- Sensors for Flow Measurement -Temperature Measurement- Sensors for speed, torque, vibration-Wearable Sensors-smart sensors.

**Unit II - Introduction to MEMS And Microsystems:** Working principle of Microsystems, materials for MEMS and Microsystems, micromachining, System modeling.

**Unit III - Fabrication Methods:** Properties of materials, Clean room, Fabrication methods, Lithography, epitaxy, sputtering, LIGA.

**Unit IV - Microsensors And Acuators:** Mechanical sensors and actuators – beam and cantilever, piezoelectric materials, thermal sensors and actuators- micromachined thermocouple probe, Peltier effect, heat pumps, thermal flow sensors, micro gripper microlens, microneedle, micropumps-Testing of the performance using LabVIEW.

Unit V - Design Of Micro System Software Tools: Modeling and design, using Matlab, Design of sensors, pressure sensor, vibration sensor, actuators Analysis using solvers, Matlab, Intellisuite, mechanical solver, electrical solver.

#### 17BM3005 MODELING AND IDENTIFICATION OF PHYSIOLOGICAL SYSTEMS Credits: 3:0:0

#### **Course Objectives:**

- Understand basic ideas related to modeling the physiological system
- Learn the functions of various physiological systems and their characteristics
- Apply the tools to create and analyze the models

#### **Course Outcomes:**

- Analyze the concepts of modeling
- Differentiate the dynamics of circulatory system
- Perform the modeling for thermal regulatory system
- Design the model for Renal system
- Evaluate the mass-balance concept for respiratory system
- Identify the model of any Physiological system

**Unit I - Basics of Physiological Systems**: Systems Analysis, examples of physiological control systems, differences between engineering and physiological control systems. Generalized system properties, mathematical approach, electrical analogs, linear models, lung mechanics, muscle mechanics, distributed parameter versus lumped parameter models, static analysis, electrical model of neural control mechanism.

**Unit II - Circulatory and Thermal Regulatory System:** Physical, chemical and rheological properties of blood, problems associated with extra corporeal blood flow, dynamics of circulatory system. Parameters involved, Control system model etc. Biochemistry of digestion, types of heat loss from body, models of heat transfer between subsystem of human body like skin core, etc. and systems like within body, body, environment, etc.

**Unit III - Ultra Filtration System:** Transport through cells and tubules, diffusion, facilitated diffusion and active transport, methods of waste removal, counter current model of urine formation in nephron, Modeling Henle's loop.

**Unit IV - Respiratory Systems:** Modeling oxygen uptake by RBC and pulmonary capillaries, Mass balancing by lungs, Gas transport mechanisms of lungs, oxygen and carbon dioxide transport in blood and tissues.

**Unit V - Identification of Physiological Systems:** Non Parametric and parametric identification methods-Numerical Deconvolution, Least Squares Estimation-Correlation functions-frequency domain-optimization techniques, Identification of closed loop systems-case studies.

#### 17BM3006 REHABILITATION ENGINEERING

# Credits: 3:0:0

#### **Course Objectives:**

- To know about various types of assist devices and its applications
- To understand the sensor and actuators and its integration for human assist devices for the disabled subjects
- To develop rehabilitation robots, mobility aids, assist devices for old aged

#### **Course Outcomes:**

- Describe the basic terminology in rehabilitation and models for societal applications
- Classify the sensors and actuators for particular applications.
- Discover the new methodology, products and systems for societal needs
- Analyze the performance of devices in various environmental conditions, design aspects
- Evaluate the design, performance, cost and affordability
- Develop the products based on cost effectiveness, user needs, environment friendly

**Unit I - Introduction to rehabilitation**-terminology, Health, disability, assist device, Assist device models, Safety standards, Community based rehabilitation.

**Unit II - Sensors for rehabilitation**-linear displacement, Angular displacement, velocity Strain, Force measurement, Motion sensor-accelerometer, Proximity sensor, optical encoder Electrical actuators for rehabilitation, electromechanical mechanism, Pneumatic actuators, Hydraulic actuators.

**Unit III - Robots in rehabilitation**- Robots in physiotherapy –Rehabilitation of the lower extremity, Robot assisted Gait training –measurements- evaluation.

**Unit IV - Mobility aids:** wheel chairs – types –wheel chair design, Design of caster-Smart wheel chair, Gyro based wheel chair with integrated controls, Personal and patient transportation system

Unit V - Assistive technology for daily living: Mobility and navigation, Accessible environments, GPS, Text based devices.

# 17BM3007 MEDICAL ETHICS

#### Credit: 3:0:0

#### **Course Objective:**

- Achieve familiarity with some basic ethical framework & understand how these ethical frame works can help us to think through contemporary questions in medical ethics.
- To know about the legal and ethical principles and application of these in medical field.
- Gain knowledge about the medical standards that to be followed in hospitals.

#### **Course Outcomes:**

- Identify the fundamental responsibilities of a clinical engineer.
- Develop a life style with ethical values and moral principles.
- Apply the moral values and ethics in their work environment
- Maintain the confidentiality issues in medical practice.
- Suggest standards that are patient centered.
- Evaluate the effect of safety standards.

**Unit I - Introduction to medical ethics:** Definition of Medical ethics, Scope of ethics in medicine, American medical Association code of ethics, CMA code of ethics- Fundamental Responsibilities, The Doctor and the Patient, The Doctor and the Profession, Professional Independence, The Doctor and Society.

**Unit II - Ethical theories & moral principles:** Theories-Deontology& Utilitarianism, Casuist theory, Virtue theory, The Right Theory. Principles - Non-Maleficence, Beneficence, Autonomy, Veracity, Justice. Autonomy & Confidentiality issues in medical practice, Ethical Issues in biomedical research, Bioethical issues in Human Genetics & Reproductive Medicine.

**Unit III - Hospital accreditation**: Accreditation- JCI Accreditation & its Policies. JCA accreditation, FDA regulations, Patient centered standards, Healthcare Organization management standards, NFPA standards, IRPC standards.

**Unit IV - Ethics in Hospital safety**: Life Safety Standards- Protecting Occupants, Protecting the Hospital From Fire, Smoke, and Heat, Protecting Individuals From Fire and Smoke, Providing and Maintaining Fire Alarm Systems, Systems for Extinguishing Fires Environment of Care Standards-Minimizing EC Risks, Smoking Prohibitions, Managing Hazardous Material and Waste, Maintaining Fire Safety Equipment, Features, Testing, Maintaining, and Inspecting Medical Equipment.

**Unit V - Medical Application safety:** Environmental safety, Interference with the environment, Ecological safety. Electrical Safety, Limitation of Voltages, Macroshock and Microshock- Earth and Protection, Leakage currents, Magnetic fields and compatibility. Medical Standards and Regulations.

#### **Reference Books**

#### 17BM3008 EMBEDDED SYSTEM AND IoT IN HEALTH CARE

#### Credits 3:0:0

#### **Course objectives:**

- To learn about the Embedded Processors with Real World applications.
- To introduce the concept of biomedical applications in embedded systems.
- To enhance the knowledge in interfacing processes with embedded controllers.

#### **Course outcomes:**

- Outline the features of ATmega processor
- Design a biomedical application in an embedded processor.
- Identify IDE for embedded processor
- Write embedded c programming for real time applications
- Compare the features of ATmega processor with other processor
- Specify, analyze and develop prototype using IOT

**Unit I - Internet concepts and infrastructure:** Broad Band Transmission facilities –Open Interconnection standards –Local Area Networks – Wide Area Networks –Network management – Network Security – Cluster computers. Internet concepts - Capabilities and limitations of the internet – Interfacing Internet server applications to corporate databases HTML and XML Web page design through programming and the use of active components.

**Unit II - Design methodology and protocols**: Introduction-Characteristics-Physical design - Protocols - Logical design - Enabling technologies - IoT Levels - Domain Specific IoTs - IoT vs M2M. IOT design methodology -IoT systems management - IoT Design Methodology - Specifications Integration and Application Development.

**Unit III - Embedded systems**: Generic Embedded Systems Structure- Components of Embedded Systems- Sensors and Actuators-importance of Analog/Digital Conversion- Embedded system based physiological monitoring system-Health care innovations using embedded system

**Unit IV - Digital Health**: Evolution of digital health-social Technological alignment – laws and regulations for digital health- ethical issues.

**Unit V - IOT in health care:** IOT based health care- physiological parameter monitoring system- future challenges in health care- health care echo system with IOT- IOT for personalized health care- wearable device characteristics-analysis of power aware protocols and standards for critical e-health applications social network analysis in health care embedded health care system for senior resident using IOT.

#### 17BM3009 DIAGNOSTIC AND THERAPEUTIC LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- To acquire, record and analyze the bio signals
- To study the different preamplifiers used for amplifying the bio signals.
- To impart knowledge about the equipment for diagnosis, therapy and surgical tools

#### **Course Outcomes:**

• Identify various sterilization methods in hospitals, equipments for post operative care units, operation theatre and physiotherapy.

- Identify the suitability of diagnostic and therapeutic equipment for specific applications.
- Analyze the performance of various biomedical equipments and their specifications.
- Apply appropriate measurement standards and safe handling of equipments in operation theatre, and surgical equipments
- Design the signal conditioning circuits and develop systems.
- Evaluate the performance of medical instruments.

#### **Description:**

This laboratory introduces the different diagnostic and therapeutic equipment, their working principles and the methodologies used for analysing and recording biosignal.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

# 17BM3010 MEDICAL SENSORS, INTERFACING & MEMS LAB

# Credits: 0:0:2

# **Course Objectives:**

- To acquire, record and analyse the IC type sensors, MEMS sensors,
- To study the different design tools software for analyzing and comparision.
- To impart knowledge about the equipments for MEMS fabrication methods

# **Course Outcomes:**

- Acquisition, recording and analyse the IC type sensors, MEMS sensors.
- Identify the suitability interfacing circuits for applications.
- Analyze the performance of sensors in simulation tools
- Apply appropriate design standards and constrains
- Design the new sensors test the performance using LabVIEW.
- Evaluate the performance fabrication methods and 3D printing facility.

#### **Description:**

This laboratory introduces the different MEMS sensors their conditioning circuits, familiarize MEMS software tools, working and the methodologies used for fabrication of micro devices and 3D printing.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

# 17BM3011 EMBEDDED SYSTEM AND IoT LABORATORY

#### Credits: 0:0:2

#### **Course Objectives:**

- Understand the fundamental concepts in embedded system and design methodology
- Learn the fundamentals of Internet concepts and its applications
- Apply embedded and IoT concepts in health care applications.

#### **Course outcomes:**

- Acquire the knowledge and concepts of embedded system.
- Comprehends the challenges in system design
- Apply the concepts of embedded system for health care applications.
- Analyze the functions of digital health.
- Compare Various levels of IoT
- Evaluate future challenges in health care

#### **Description:**

This laboratory introduces the fundamentals of embedded based system development, familiarize software tools, design of IoT based applications in health care.

The faculty conducting the laboratory will prepare a list of 12 experiments and get the approval of HOD/Director and notify it at the beginning of each semester.

## 17BM3012 AMBULATORY SERVICES

#### Credits 3:0:0

#### **Course Objectives:**

- Understand the fundamentals of patient monitoring system
- Learn the design of ambulance and transportation systems
- Apply computer based technology in ambulatory services

#### Course outcomes:

- Identify the principle of patient monitors and its interfacing circuits for application
- Classify the types of services and systems
- Apply the design tools to test and develop lift mechanism for given specifications
- Analyze the most relevant challenges facing the patient safety and protection
- Evaluate the systems based on the criteria and its impact on environment and user.
- Create the smart safety alert systems for the application

Unit I - Patient monitoring systems- artifacts-denoising techniques- Advancements in Wireless patient Monitoring system- Case study.

Unit II - Design of ambulance- Vehicle design- ambulance train- disaster relief squad- regulation for patient transportation- Case study.

Unit III - Lift mechanism- Design of lift mechanism for patient-design of lift in ambulance- computer based systems- Case study.

**Unit IV - Design of mobile diagnostic equipment:** devices with battery backup- mobile X-ray unit- nursing-medical gas handling-regulations-GPS in ambulance networked services- Case study.

Unit V - Accident care systems- automated alert system- smart safety systems-fire protection –maintenance and regulation-Accreditation for ambulance services- Case study.

#### **Reference Books**

# 17BM3013 TELEHEALTH TECHNOLOGY

#### Credits 3:0:0

#### **Course Objectives:**

- Understand the development of technology for support telehealth
- Learn the improved healthcare methods to meet greater expectations on the health service
- Apply the design, selection, procurement, installation, management, maintenance, and evaluation of telehealth systems appropriate to present and future needs.

#### Course Outcomes

- Identify the basics of telemedicine and its application
- Classify the technologies and standards
- Apply principles and methods of evaluation to telehealth projects
- Analyze the most relevant challenges in telemedicine to rural areas
- Evaluate the systems based on the criteria and its impact on environment and user.
- Create the telehealth technologies for future challenges in population

**Unit I - Telemedicine And Health:** History and Evolution of telemedicine, Functional diagram of telemedicine system, Telemedicine, Tele health, Tele care, Organs of telemedicine, Global and Indian scenario, Ethical and legal aspects of Telemedicine - Confidentiality, Social and legal issues, Safety and regulatory issues, Advances in Telemedicine.

**Unit II - Telemedical Technology:** Principles of Multimedia - Text, Audio, Video, data, Data communications and networks, PSTN, POTS, ANT, ISDN, Internet, Air/ wireless communications: GSM satellite, and Micro wave, Modulation techniques, Types of Antenna, Integration and operational issues, Communication infrastructure for telemedicine – LAN and WAN technology. Satellite communication. Mobile hand held devices and mobile communication. Internet technology and telemedicine using world wide web (www)-Video and audio conferencing-clinical data– local and centralized.

**Unit III - Telemedical Standards:** Data Security and Standards: Encryption, Cryptography, Mechanisms of encryption, phases of Encryption. Protocols: TCP/IP, ISO-OSI, Standards to followed DICOM,HL7, H. 320 series (Video phone based ISBN) T. 120, H.324 (Video phone basedPSTN), Video Conferencing, Real-time Telemedicine integrating doctors /Hospitals.

**Unit IV - Mobile Telemedicine:** Tele radiology: Definition, Basic parts of teleradiology system: Image Acquisition system Display system, Tele pathology, multimedia databases, color images of sufficient resolution, Dynamic range, spatial resolution, compression methods ,Interactive control of color.

**Unit V - Telemedical Applications:** Telemedicine access to health care services – health education and self care Introduction to robotics surgery, telesurgery. Telecardiology, Teleoncology, Telemedicine in neurosciences, Electronic Documentation, e-health services security and interoperability, Telemedicine access to health care services – health education and self

# 17BM3014 HOSPITAL AND EQUIPMENT MANAGEMENT

# Credits 3:0:0

#### **Course objectives:**

- Understand the fundamentals of health care delivery services
- Learn the procedures in maintenance of equipments
- Apply the design principles in engineering systems

#### **Course outcomes:**

- Identify the principle of organizational structures and regulatory services
- Classify the types of codes followed and applications
- Apply the design to develop support systems
- Analyze the most challenges in environment and market trends
- Evaluate the systems based on the safety criteria to environment
- Create the methodology for new equipments to user needs

**Unit I - Health And Hospital Management:** Health organisation of the country, the State, the Cities and the Region, Management of Hospital Organisation, Nursing Sector, Medical Sector, Central Services, Technical Department, Definition and Practice of Management by Objective, Transactional Analysis Human Relation in Hospital, Importance of Team Work, Legal aspect in Hospital Management. Case study: Health survey.

**Unit II - Regulatory Requirement And Health Care Codes:** FDA Regulation, Joint Commission of Accreditation for Hospitals, National Fire Protection Association Standard, ISO, NABL, Environmental regulation. Case study on ISO.

Unit III - Equipment Maintenance Management: Hospital architecture, Piping, planning of construction, Organising, Maintenance Operations, Maintenance Job Planning, Maintenance Work Measurement and Standards,

Preventive Maintenance, Maintenance Budgeting and Forecasting, Maintenance Training, Contract Maintenance. Case study: Laboratory automation.

**Unit IV - Clinical Engineering:** Role to be performed in Hospital, Manpower & Market, Professional Registration, Maintenance of Hospital support system, surveillance network, electric power management, Medical gas production, waste disposal, inventory control. Case study: RF id tag for inventory.

**Unit V - Hospital Equipments**: Operation of safety devices, personnel safety equipments, Gas mask, Radiation measurements, equipment safety systems, elements of basic first aid, fire fighting, Case study: Safety Awareness.

#### **17BM3015 ROBOTICS IN SURGERY**

#### Credits: 3:0:0

#### **Course objectives:**

- Understand the fundamentals of robotics and its degree of freedom
- Learn the various sensor and actuators required for its functions
- Apply the machine learning concepts in medical applications

#### **Course outcomes:**

- Identify the fundamental concepts in robotic systems
- Classify the types of sensors and actuators for its applications
- Apply the design tools to develop artificial intelligence techniques
- Analyze the conditions required for testing and control of autonomous robots
- Evaluate the safety aspects to human and environment
- Create the robots for assisting in surgery

Unit I - Introduction to Robotics, degree of freedom, path planning, Lagrange equation of motion, kinetics, payload, Links and Joints,

Unit II - Sensors and actuators: gripper- tactile sensor, Sensor for vision and motion, proximity switches, controllers. Path planning, path tracking, GPS based feedback control.

Unit III - Programmable controller, artificial intelligence, machine vision, design of controllers based on embedded system, human machine interface, case studies

**Unit IV - Human-robot interaction**, human factors: perception, motor skills, social aspect of interaction, safety, Haptic robots, collision detection, autonomous robots. Applications in physiotherapy.

Unit V - Robotics in surgery: surgical robotics, robot supported diagnostics, micro-robots,

nanorobots at the cell level, Robots in medical applications.

#### 17BM3016 SPEECH SIGNAL PROCESSING

#### Credits: 3:0:0

#### **Course Objective:**

- To introduce the models for speech production
- To develop time and frequency domain techniques for estimating speech parameters
- To introduce concepts of speech compression, recognition, synthesis and speaker identification

#### **Course Outcome**

- Qualitatively describe the mechanisms of human speech production.
- Analyse speech signals in the time and frequency domains
- Solve problems regarding parameter estimation in source-filter production models for speech analysis
- Devise methods and systems for efficient quantization and coding of speech signals, speech enhancement and simple pattern-recognition.
- Evaluate the methods used for speech signal analysis and apply suitable methods for practical applications.
- Deign an simple system for speech processing

**Unit I - Nature of Speech Signal** - Speech production mechanism, Classification of speech, sounds, nature of speech signal, models of speech production. Speech signal processing: purpose of speech processing, digital models for speech signal, Digital processing of speech signals, Significance, short time analysis.

Unit II - Time Domain Methods For Speech Processing - Time domain parameters of speech, methods for extracting parameters. Zero crossings, Auto correlation the function, pitch estimation. Unit III - Frequency Domain Methods For Speech Processing - Short time Fourier analysis, filter bank analysis, extraction, spectrographic analysis, Format extraction. pitch Analysis synthesis systems. Unit IV - Linear Predictive Coding of Speech - Formulation of linear prediction problem in time domain, solution of normal equations, Interpretation of linear prediction in auto correlation and spectral domains. Unit V - Homomorphic Speech Analysis - Central analysis of speech, format and pitch estimation, Applications of speech processing - Speech recognition, Speech synthesis and speaker verification.

#### 17BM3017 HOSPITAL AUTOMATION

#### Credits: 3:0:0

#### **Course Objectives**

- To introduce the concepts of hospital systems and need for central monitoring
- To learn about power generation, utility and protection system
- To Apply distributed and central monitoring functions in hospital environment

#### **Course outcomes:**

- Identify the factors in central power generating and monitoring systems
- Classify the equipment types and its applications
- Apply software tools and digital computer for monitoring of parameters, Medical data handling
- Analyze the sensors and actuators for the automation systems
- Evaluate the methodologies in measurement systems and automation
- Create central monitoring station for hospitals for control and surveillance applications.

Unit I - Hospital system automation: power generator, maintenance, battery-maintenance and troubleshooting, energy conservation and monitoring system- Case study.

Unit II - Medical gas production: Automation in dryer, compressor, air conditioning, lighting, heating systems.

Unit III - Automation in piping: Monitoring of flow -Leakage test- prevention and safety automation.

**Unit IV - Instrumentation systems:** limit switches, sensors, controllers, control room, central monitoring stationalarm system –regulation and standards. Case study.

Unit V - Office Automation: Tools for data retrieval, RFID in medical record -surveillance system in hospital- case study.

#### 17BM3018 HUMAN ASSIST DEVICES

#### Credits 3:0:0

#### **Course Objective:**

- Introduce the Fundamental terms and concepts of human assist devices
- Learn various assist device functions and characteristics.
- Apply design tools for modeling and analysis of assist devices

#### **Course Outcomes:**

- Identify the requirements for human assist devices
- Classify the systems based on applications
- Apply soft tools for analysis and design of devices for specific applications
- Analyze the merits of human assist system and its influence to environment.
- Evaluate the methodologies in measurement systems and conditions
- Create instrumentation techniques for development of assist devices to human needs

**Unit I - Heart Lung Machine And Artificial Heart:** Condition to be satisfied by the H/L System. Different types of Oxygenators, Pumps, Pulsatile and Continuous Types, Monitoring Process, Shunting, The Indication for Cardiac Transplant, Driving Mechanism, Blood Handling System, Functioning and different types of Artificial Heart, Mock test setup for assessing its Functions

**Unit II - Cardiac Assist Devices:** Synchronous Counter pulsation, Assisted through Respiration Right Ventricular Bypass Pump, Left Ventricular Bypass Pump, Open Chest and closed Chest type, Intra Aortic Balloon Pumping Veno Arterial Pumping, Prosthetic Cardio Valves, Principle and problem, Biomaterials for implantable purposes, its characteristics and testing. Case study.

**Unit III - Artificial Kidney:** Indication and Principle of Haemodialysis, Membrane, Dialysate, Different types of heamodialysers, Monitoring Systems, Wearable Artificial Kidney, Implanting Type- Modeling and analysis. Case study.

**Unit IV - Prosthetic And Orthodic Devices :** Hand and Arm Replacement - Different Types of Models Externally Powered Limb Prosthesis Feedback in Orthodic System, Functional Electrical Stimulation, Haptic Devices

**Unit V - Respiratory And Hearing Aids:** Intermittent positive pressure, Breathing Apparatus Operating Sequence, Electronic IPPB unit with monitoring for all respiratory parameters. Types of Deafness, Hearing Aids- Construction and Functional Characteristics.

#### 17BM3019 HUMAN COMPUTER INTERFACES

#### Credits 3:0:0

#### **Course objectives:**

- Understand the fundamentals of EEG signal acquisition techniques
- Learn the feature extraction methods
- Apply the design principles in developing EEG based robotic application

#### **Course outcomes:**

- Identify the fundamental principles of EEG signal and data acquisition methods
- Classify the types of signals and its components
- Apply the design tools to develop simulation models
- Analyze the signals to develop the applications
- Evaluate the systems based on the design specifications
- Create the applications for medical diagnosis and robots

**Unit I - Introduction To Brain Computer Interfaces:** Concept of BCI – Invasive and Non-invasive Types – EEG Standards – Signal Features – Spectral Components – EEG Data Acquisition – Pre-processing – Hardware and Software – Artifacts – Methods to Remove – Near Infrared BCI.

**Unit II - BCI Approaches:** Mu Rhythm – Movement Related EEG Potentials – Mental States – Visual Evoked Potential Based – P300 component.

**Unit III - EEG Feature Extraction Methods:** Time/Space Methods – Fourier Transform – Wavelets – AR models – Band pass filtering – PCA – Laplacian Filters – Linear and Non-linear Features.

**Unit IV - EEG Feature Translation Methods:** LDA – Regression – Memory Based – Vector Quantization – Gaussian Mixture Modeling – Hidden Markov Modeling.

Unit V - Case Study: Case Study of Problems in BCI - Case Study of Brain Actuated Control of Mobile Robot.

#### 17BM3020 ERGONOMICS IN HOSPITALS

#### Credit 3:0:0

#### **Course Objectives:**

- Introduce the Fundamental terms and concepts of human factors
- Learn anthropometric principles and optimize human well-being and overall performance.
- Apply signal acquisition and processing of human stress related issues in hospital work area.

#### **Course Outcomes:**

- Identify the problems in posture and work efficiency
- Classify the workspace and related systems
- Apply signal processing techniques for analysis and feature extraction.
- Analyze the anthropometric concepts to human system and environment.
- Evaluate the methodologies in measurement systems and conditions
- Create instrumentation techniques for development of user friendly systems

**Unit I - Human-machine system:** Definition, human technological system, manual, mechanical, automated system, human system reliability, human system modeling, Human Output And Control, material handling, motor skill, human control of systems, controls and data entry devices, hand tools and devices,

Unit II - Workplace Design: Applied anthropometry, workspace design and seating, design of computer worktable, case studies.

Unit III - Measurement: physical stress and fatigue using EMG and EEG- Modeling of pain. Case study.

Unit IV - Environmental Conditions: Illumination, climate, noise, motion, sound, vibration. Musculoskeletal anatomy, Quantitative models, Case study

**Unit V - Human body kinematics**: Instrumentation concepts - Instrumentation for the Measurement human body kinematics. Case studies: computer based evaluation of recovery process caused due to limb fractures, cognitive stress to patients.

#### 17BM3021 FINITE ELEMENT MODELLING IN BIOMEDICAL ENGINEERING

## Credit 3:0:0

#### **Course Objectives:**

- Introduce the fundamentals of Finite Element Analysis
- Learn enable the students to formulate the design problems into FEA.
- Apply finite element technology to develop medical applications

#### **Course Outcomes**:

- Identify the fundamentals of concepts and FE tools
- Classify the methods for suitable applications
- Apply solver tools for analysis and design for specific applications
- Analyze the medial applications and its influence to environment.
- Evaluate the methodologies to optimize the design and analysis
- Create the medical applications to human needs

**Unit I - Introduction:** Basic concepts- Historical Background -finite element packages- Boundary Value and Initial Value Problem-Weighted Residual Methods-General Procedure of FEA-Element Types and its Characteristics.

**Unit II - Concept of Element Assembly**-Bandwidth and its effects- Boundary conditions-Aspect Ratio- Pascal's Triangle- Stiffness matrix -beam element-Shape Function for Spar element, Beam element- Convergence and Continuous criteria.

**Unit III - Structural Problems:** Equations of elasticity- plane elasticity problems - Bending of elastic plates Heat Transfer Problems.

**Unit IV - One Dimensional equation:** Heat transfer derivation of finite element equation -Fluid Mechanics problems: incompressible fluid flow-Biomedical Applications.

**Unit V - Case studies:** FE modeling of blood flow channel, limb, bone, implants, sensors analysis using mechanical solver, electrical solver, electrical solver, Vibration analysis using software tools.
