

JOEL VARMA

I am Joel Varma, a final-year student from the 2020-24 batch in the Mechanical Engineering Division. As someone who entered the campus as an introverted individual with uncertainty about my post-study prospects, I can confidently say that my time at Karunya has been transformative, shaping me into the person I am today. The picturesque campus, coupled with its natural charm, left me spellbound upon my arrival.

The impeccable facilities and abundant resources available played a pivotal role in fueling my interest in engineering. The wealth of resources for academic and research pursuits was truly remarkable. The comprehensive placement training provided enabled me to secure a core placement at Hyundai Motor Company, Chennai, with a package of 9.25 LPA, underscoring the practical skills honed during my time at Karunya.

Active involvement in contributing to a couple of patents reflects the department's commitment to fostering innovation. My passion for additive manufacturing has been a driving force, and I am eager to apply and expand upon these skills in my future endeavors. The support and guidance received have not only shaped my academic journey but also propelled me into a promising career. I am grateful to be part of an institution that genuinely cares about holistic growth, aspiring to mould individuals into better versions of themselves than when they first arrived. Such institutions, genuinely committed to both academic and holistic development, are a rarity.
