

TOM NICHOLAS FREEMAN S

I am Tom Nicholas Freeman, a graduate from the 2020-24 batch of Karunya Institute of Technology and Sciences. This esteemed university has a solid foundation in engineering and technology for providing exceptional education and training in mechanical engineering. The knowledgeable and experienced professors have always been supportive, creating an environment conducive to learning.

Karunya is well-equipped with advanced technology and resources that enable students to delve deeply into their chosen field. The campus life is vibrant, offering various activities and events that foster interaction among students. Personally, the university has equipped me with the knowledge and skills essential for a successful career in mechanical engineering, and I am grateful for the opportunities it has provided.

During my tenure as an Engineering Trainee at Waldhauser + Hermann AG in Switzerland through the IAESTE program, from August to September 2023, I undertook pivotal tasks such as energy consumption assessments, design calculations, and crucial data collection for ongoing projects. This hands-on experience not only enhanced my technical proficiency but also honed my collaborative skills, implementing industry best practices within the HVAC sector.

In conclusion, my journey at Karunya has significantly contributed to my development as a mechanical engineer. The knowledge gained and connections made during this period will serve as a robust foundation for my future endeavors. I express profound gratitude for the unwavering guidance throughout my journey and extend heartfelt thanks to the Head of the Division (HOD), dedicated faculty, and staff for facilitating this invaluable opportunity.
